You better believe it. Tuesday's episode had one of its characters being labelled as a "lunatic" with "something wrong with them". I changed channels rapidly at this point, but in retrospect perhaps I should have carried on watching and taped the program.

A few days ago I bought a video recorder (about time too) for evidence gathering purposes. But strangely the TV news (both BBC and ITN) haven't uttered a sound over the last few days. Almost as if they know they're being taped...

....

And?

There are many characters in TV programmes who _are_ lunatics with 'something wrong with them'. Why do you think this alludes to you?

In the eponymous book, Cervantes' Don Quixote is described as 'crazy' 'mad' and 'lunatic'. Do you think this is a reference to yourself, albeit written by a time-travelling 17th century Spaniard?

If you accept that the character of Don Quixote can be described thus
without it being a reference to you, what problem do you have with
Peak Practice? Or do you enjoy tilting at your own little windmills?

A friend's lodger has turned out to be paranoid schizophrenic. Her
obsessions are strikingly similar to yours, she is convinced that she
is being bugged, and that students at her college are making fun of
her for being foreign. She has been looking for the services of a
private detective. Maybe Oxford has this unfortunate effect on foreigners?

I must say that I'm surviving rather well, or that's what the man
under the stairs told me yesterday.

Victor Lewis-Smith has broken the silence in his TV review column "Goon and best forgotten" in the Evening Standard (on Thursday 8/May). He said, "If I sound paranoid, that's probably because I once worked there. Eventually, I had to leave because they were all trying to kill me but, for sheer pathological hatred of the Corporation, I couldn't hold a candle to Spike Milligan".

I take this to be about me, because recently I wrote to both the BBC and Capital Radio, saying "I believe the current purpose of the harassment is to force me to kill myself to prevent the harassers, yourselves included, from being brought to justice, and last year there were several incidents of people shouting 'suicide' at me, which would appear to corroborate that view." I think VLS's words about the BBC "all trying to kill me" shows he has seen or heard of what I sent to the BBC or Capital.

Nasty eh? I believe that VLS or his mates read this newsgroup. I wonder how he would explain his article?

....

Erm, Mike, I'm a bit of a fan of Victor Lewis-Smith, ever since his days of "BuyGones". I must admit, he often likes to play the flawed lunatic evil nasty person. He's been doing it for years, with prank calls, far before your illness. Its his act. He wouldn't be VLS without it.

He doesn't like the "Goons" either. It isn't about you.

>I take this to be about me, because recently I wrote to both the BBC and

I don't think Victor Lewis-Smith has worked for the BBC (or Capital) for
several years (1994 was the last time...), so the connection, is paranoia
here.

Personally, I believe VLS as a person of reasonable integrity, who wouldn't
give a fuck about you...

>Nasty eh? I believe that VLS or his mates read this newsgroup. I wonder how he
>would explain his article?

Keep up the medication, not as many people read this newsgroup as you think,
even though you are now incorporating that into your illness.

Victor? Are you there?

Subject: David Hepworth (GLR) is taking the piss
Newsgroups: uk.misc
Organization: Toronto Free-Net
Summary:
Keywords:

>Last night (21/Feb/97), I was listening to BBC GLR. You have to understand that
>I was listening by stealth. Back in 1990 I used to have Capital blaring out of

Not much changes. Today I was listening again to David Hepworth's show on GLR, having more or less waded in on it by accident. Here is the exchange;

David: "we have executive drivetime, we have Brian in charge of the prize cupboard. Brian it's not a bad prize cupboard this week is it?"

Brian: "no David it's an absolute (EMPHASIS) embarrassment (END-EMPHASIS) of prizes this evening" (laughter)

David: "what have we got?"

Brian: "well in my left hand alone we've got that .... Gary Clale, I don't know if you remember him obviously still alive and kicking...."

David: "Rock and roll spelling test is your first opportunity to take advantage of this embarrassment of prizes"

What do I read into this exchange? The laughter after the word "embarrassment" shows they're aware of the last complaint I made on usenet (copied by snail-mail to them). The "left hand" business is I think a coded way of calling me a w***er (the term would be better applied to Brian and David).

I have a tape of this exchange, and will eventually get around to posting it on the website.

I don't understand. Why has nobody replied to this post? You keep on asking for evidence, then I present you with something that looks very much like evidence,

and everybody just ignores it. OK I haven't posted the actual sound extract,
and it still isn't proof.

Perhaps everybody just finds it all too boring and dull. Should I start
spamming again from one of those nice anonymous remailers to wake everyone up?
Now there's a thought.
....
Mike Corley <bu765@torfree.net> wrote:

Cos you don't reply to our points - you're ignoring us, why shouldn't
we ignore you?

>You keep on asking for evidence, then I present you with something
>that looks very much like evidence,

No you don't, you post something which could _never_, _ever_ be construed
as referring to yourself. Can't you see it? No, of course you can't,
you've an illness.

>Perhaps everybody just finds it all too boring and dull. Should I start
>spamming again from one of those nice anonymous remailers to wake everyone up?
>Now there's a thought.

And I see you've started. Give it a rest, Mike, unless you're prepared to
enter into proper discussion.

Overview

What all these snatches of video and audio, and newspaper articles, have in common is that none of them provide conclusive or very convincing evidence of their being directed against me, or forming part of a campaign against me. Other people with my illness doubtless could produce similar non-proof if they were minded to do so.

Good, now we've got the disclaimer out of the way, we can describe precisely what it is that is on display in this part of the site. In the video section, we have Quicktime (MPEG-4) clips of Jon Snow of ITN in action, also interviews with Ken Clarke and John Major of the ousted Tory regime. These are embedded in the page using QuickTime. While each audio/video clip is coded to automatically download the QuickTime player, you may find it helpful to download QuickTime from Apple's website before you start viewing the media files.

Note that each item is awarded a rating of the confidence I feel that it is directed at me, expressed as a percentage. Items with 50% or more are probably about me; 100% indicates a "dead cert".

In audio we have MP3 files of harassment at work in Canada in late 1996, also GLR's David Hepworth not even trying to pretend that he isn't getting at me, and a snippet of Capital. There is also an album track which I have taken as being about me. The newspapers section contains articles by Bernard Levin on his encounter with a madman who "bursts into tears, and swears it is all true - and it is". Also a Private Eye cover, and snippet from Victor Lewis-Smith.

I have added several recordings of abuse "in public". By Sept/1998 I had seven minidiscs of such recordings, unfortunately containing mostly very nasty sexual slanders which I will not be publishing on this website. The recordings were made on a Sony Minidisc Walkman MZ-R30, which I purchased in Canada in July/1997, with ECM-T140 microphone. After both the MZ-R30 and the microphone reached the end of their lives, in June/2001 I purchased as replacement my current recording gear, an MZ-R900 walkman with ECM-T145 microphone.

Share and Enjoy! I hope you enjoy partaking in my delusions which have been recorded with high fidelity digital equipment and presented for your listening pleasure.

Ken Clarke (1), April 1997

Certainty level: 30%

The first of two video segments from the same program, this shows Jon Snow interviewing Ken Clarke in April 1997, during the general election campaign. The following exchange is heard;

Jon Snow: "You say we are booming in your posters, the bust's around the corner"

Ken Clarke: "You took that from three years ago, when I was being advised to do all kinds of mad things to stimulate the economy, and being told that I had to take desperate measures to get it going"

At this time I was watching television almost continuously at home, with a video recorder whirring away, trying to obtain from the newscasters a reaction which would give them away. I think this is an instance where it happened. Ken Clarke first darts a glance straight at the video camera (and perhaps at a monitor next to it showing my living room), then comes out with "all kinds of mad things", while engaging in a facial display involving raising of eyebrows and lowering of eyelids. To me at the time, and also now, it looked as if he was selecting a context into which he could drop the word "mad" as a directed insult against me.

Ken Clarke (2), April 1997

Certainty level: 30%

The second of two video segments from the same programme, this shows Ken Clarke during the election campaign. He makes the following statement;

"we have a party, and we have a Cabinet which has produced a manifesto consistent with our policy of the last five years;
people are challenging us on the basis there's been some monstrous conspiracy between all the politicians to guide us we know not where,
we know where we're going, we wish to be a leading influence in the European Union"

It should be fairly obvious what I read into in the above sentences. The "monstrous conspiracy between all the politicians" could of course apply to the public perception of closer European integration, but I took it as referring to the conspiracy of politicians and media people against me. Again, facial expression comes into it; as Clarke speaks of the "monstrous conspiracy" his eyebrows twitch and it is clear that something or somebody is being made fun of.

```

Dimbleby / John Major, April 1997

Certainty level: 90%

Dimbleby interviews John Major during the election campaign. Here is the exchange, regarding Neil Hamilton, the "sleazy" Tory candidate;

Dimbleby: "It's a direct quotation from what he said to Sir Gordon Downey and what he said to his local newspaper, the Knutsford Guardian".
Major: "Well, heaven forfend that I should doubt what the Knutsford Guardian actually said"
Dimbleby: "Well I should hope so"
Major: "Absolutely, it would be quite unforgivable to doubt the Knutsford Guardian"

What I find in this segment is an assonance between "Knutsford" and "Nut" or "Nuts". I think Dimbleby deliberately invents the play on words, and says it clearly enough for Major to pick it up and repeat it. You can gauge Dimbleby's intent from his facial expression of false

honesty when he uses the words "Knutsford Guardian"; and Major's reaction
follows from his recognition of Dimbleby's intent; Major smiles and says
it would be "unforgivable to doubt the Knutsford Guardian".
These are much clearer on the original video than on this Quicktime clip.

Channel Four TV News - 12/Feb/1999

Certainty level: 100%

I am positively, utterly, completely sure this item is about me. It's a bit subtle
so the objective reader might not understand my certainty. Here is
what happened. I was watching Channel Four News with Jon Snow, on the day Clinton
"got off" (as it were) in the Monica-gate scandal. Snow said;

"[and we're anticipating that the President himself will make his] first comments after the trial in which he has now been cleared at around half-past seven. So we'll have more on the historic judgment, we'll also be considering [starts smiling] the winners and losers in this whole sorry saga. Now further doubts have been...."

When Snow said "half-past seven", I looked at the clock on the mantelpiece above the TV. Snow saw my glance, and in reaction to my glance at the clock, smiled. I think he was smiling at what he perceived as my self-importance.

Usually when newscasters or radio presenters laugh at me, there is an excuse for their laughter; usually they manage to find some reason for my being "funny"; their amusement is blamed on me; it is my "fault" they are laughing. And so it was with this instance; Jon Snow thought it was funny that I should be so interested in seeing Clinton, and his half-smile while reading the words "winners and losers" expresses that.

I wrote to Snow at ITN shortly after this broadcast to ask him about his behaviour; of course, he didn't reply.

Chris Tarrant - 10/March/1999

Certainty level: 25%

This one might be aimed at me, or it might be tinged with a whiff of intent, although I only give one chance in four for Tarrant's thoughts being aimed at me when he said this. During his "Who wants to be a Millionaire" TV show in March 1999, he said;

if you're watching the show jumping up and down screaming at the telly, remember you could be here. You can either seek professional help or call us...

The background is as follows. In early March I'd sent a quantity of emails to Capital FM, the London radio station where Mr Tarrant has his breakfast show. They were addressed to the email account which Mr Tarrant used to read emails posted on Capital's website. Capital objected to the quantity of emails - in fact, they contacted the Metropolitan Police's Computer Crime unit, who, in turn, "felt my collar" by giving me a verbal warning over the phone to cease this behaviour.

The emails contained the words which I had heard Mr Tarrant speak in early 1994, namely;

"You know this bloke? He says we're trying to kill him.
We should be done for attempted manslaughter".

At the time of writing (May 1999), the Police have not told me what aspect of the emails was "illegal", nor despite my repeated urging have they questioned Mr Tarrant about his remarks from 1994.

Regarding the clip from Tarrant's show above. The Police spoke to me on the afternoon of Wednesday 10 March 1999. Tarrant's live show went out that same evening. The Police have told me that after speaking to me they told Capital FM that they'd spoken to me regarding the emails. So Tarrant would have known by the time of the show who'd sent the emails and why.... and it's quite possible that his remarks about "seeking professional help" were aimed at me personally following my attempts to persuade him to own up to his 1994 remarks.

Andreas Kromke mentioned that the only way that there would be a TCP/IP
driver for MagiCMacX would be if someone wrote the necessary module.

I thought that there was a certain amount of shooting oneself in the
foot, but let's face it, the Internet browsing experience on the Mac is
much better!

It might work with another driver. HDDRIVER is prepared for handling
SCSI and ACSI drives in a mixed setup if a Link-compatible adapter is

present. Since this setup is unusual I have never extensively tested it, though. What I would expect to work is a Megafile drive directly connected to the ST, a Link adapter connected to the DMA OUT port of the Megafile drive, and a SCSI drive connected to the Link.
You can use the HDDRIVER demo version (http://www.seimet.de/hddriver_english.html) in order to check whether you can use HDDRIVER at all with your hardware setup. Running the ID-check should be sufficient. If both drives are recognized things look good and HDDRIVER should be able to properly access both drives.

Version 3.92 of TeraDesk open-source desktop for the 16-bit and 32-bit
lines of Atari computers is (again) available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

The initial release of this version (program dated July 20th) contained
a bug that disabled it on systems with more than a few megabytes of RAM.
This bug has now been fixed. The corrected version of the program is
dated July 25th 2007.

Sorry for the inconvenience.

Have fun.

I tried this out (booting from floppy and then loading the trial HDDRIVER from it).

Unfortunately, the behvavior I got was rather random, with the system seeing only the AdSCSI and not the MegaFile. I tried both orders in the ACSI chain but in no case could I get the system to see both drives, although once it saw the MegaFile and not the AdSCSI.

I was wondering if there is some sort of "ACSI ID" that needs to be set to
allow the computer to distinguish between multiple ACSI devices attached to
the system. I certainly have not heard of this, and there are no jumpers on
the AdSCSI board to allow this to be set.

I guess my only option may be to simply find a stack of 720K floppies and
use some backup software to backup and restore that way.

Thanks.

Jason Harmon

Check that you have different SCSI IDs.

Also you say you have a "bunch of partitions". TOS does has a limit
(16?) on the number you can have IIRC.

Hi there,

I have a couple of suggestions before you start searching for your old disk boxes.

Firstly, if you have a PC with a SCSI card you can connect the disk there, make a disk image and then extract the files from it, or if you use linux you can mount the disk directly. A PCI SCSI card should be dirt cheap to get hold of if you don't have one.

Also, another idea would be to make (or buy) a cross serial cable and use Ghostlink on window$ or do$ to transfer files from the old disk to your PC partition and then get them back from there for your new disk.

If you find any of these 2 ideas attractive then I could dig up some links for you. Hope this helps.

The problem with this method is that the old drive in the MegaFile is not SCSI. It is an RLL drive (the MegaFile has a ACSI->SCSI->RLL controller in it, so without some additional hardware there is no way to hook it up to my PC's SCSI card.

If there is some software than can easily transfer a whole hard drive over serial to a PC, that would be great.

You have to ensure that both drives use different IDs. There are jumpers
somewhere on the Megafile board to change the ID, and there are also
jumpers on your SCSI drive to set the ID.
The AdSCSI does not have jumpers since the settings must be changed on
the drives, not on the adaptor.

Ok, I may have misunderstood how this worked. I believe the AdSCSI is fixed as ID 6, and my SCSI drive connected to it is ID 0.

I was under the (probably mistaken) impression that devices connected to a seperate ACSI controller would be part of a seperate SCSI chains and would not collide with those on a different controller (similar to having 2 SCSI cards in a PC and having different drives connected to each card).

However, I will make sure the jumpers on the MegaFile board aren't set to 0 or 6 and see what happens.

Thanks.

Thanks for the Ghostlink suggestion. While its a bit slow, it is certainly easy to use and seems to be doing what I need it to.

Does anyone have recommendation on the best ANSI C compiler for the ST? I have some utility apps I wrote that I would like to port to the ST, but the only C compiler I have is Megamax which is K&R and not ANSI.

I heard that Borland released Turbo C for the ST... Does anyone have a copy of this? I own the DOS version and an ST version would be great.

Thanks.

Jason Harmon

Go to http://rg.atari.org/source.htm, you can download a copy from
there. Also, there's Reservoir Gods' Godlib there, which has a wealth
of ST specific code there (mostly for games though). Now if you want
to delve into GEM programming, I really can't suggest anything right
now.

Yep, that's the idea, and since you'll only be doing it once you can
drag your partitions to the ghostlink drive and let it rip.Of course
another method would be to use ethernet, but it's a bit hard (I think)
to get one and it requires some setting up to do.

I didn't know Turbo C was released for Atari. What I heard was that Pure C became Turbo C on the PC. In fact I have used both and they are very similar animals. I loved Turbo C in DOS (sorry for the bad language) because it had a great IDE and the online help was fantastic. As far as I know there is very little English documentation for Pure C (just a long readme) the proper manuals are in German. That's probably why these days I use Lattice C 5.6, I bought it especially to make sure I had all the manuals, and boy I have needed them...

Or, you can use GNU C. You may know that you can switch it to several different C standards, and it will also compile other languages like C++, Fortran, Pascal (ugh!) etc. This is of course free software, and there is plenty of documentation on the net. I don't know which Atari specific libraries exist though, but I know they exist.

Good luck.

This is great!!
What I would like to see, is a way by which all we atari owners can
pitch in five or ten dollars a month to an Atari Developer Fund, which
at the end of every month, quarter, or year gets devided amongst all the
active developers.

What do you all think?

Hi,

> What do you all think?

I can only talk only for me, but I don=B4t need this. I write my programs f=
or fun. So, in my opinion it would be better to write an email to the autho=
rs and say just "Thank you" than organize a "developer fund" where you prob=
ably get 20 Bucks a year to divide.:-) Most people are to lazy to write an =
email to the author, why should they busier to spend money?
Most of the programmers that are active for Atari today are people with job=
s and I think they do not need the money, but what they like is a little bi=
t honour.

Bye

Hello,

I just visited the site about 4 days ago and I was able to get it. I heard he was going to update the CTPCI area. I am waiting for the CTPCI also as well as a CT63 that I paid for back in February. I am hoping to put it all in a tower setup.

Hello all,

Well I am getting clost to putting my Falcon in my old Hades tower. I have the cables to extend the ports to the outside for the cartridge, printer, MIDI, keyboard, joystick, video. I have the SCSI and IDE ports taken care of. I took out the motherboard and traced it on a piece of cardboard. I tested the cardboard shape in my tower to see if it would fit. It looks like the bottom two bays are in the way. My tower has six bays and I only use 4. I guess I would have get a four-bay apparatus and use that or just get a new tower.

I am also looking for a new ATX PSU. What wattage is good?

Any suggestions or comments are welcome.

That is fine with me. I am always willing to contribute. I appreciate any new Atari program that comes out.

I have a DVD and CD in my Atari system. I just backed up my old drive to a CD
and then tranfer it from the CD to my new drive. Worked great.

Wattage is mostly irrelevant. Good quality stable outputs are what you need.

I run my CT60 falcon on one of these:

http://www.mini-box.com/M1-ATX-90w-Intelligent-Automotive-DC-DC-Power-Supply?sc=8&category=13

My related post on DHS: http://bbs.dhs.nu/ct60/index.php?request=2543 stated 2 years ago that my CT60 falcon only drew 38W. At that time I was thinking about using an Xbox PSU as it seemed almost good enough to work but for the price of an M1-ATX and the fact that it plugs and goes (and fits behind the CT60 in the original case without the CTEX) there was no competition. Oh, it's silent too :)

If you decide to go this route, don't get tempted to buy the M2. It's overall power rating is higher, but only because of the huge 12V supply (designed for P4 mobo's). There is less amperage available on the 3.3V and 5v lines.

Hello again,

Well it looks like I will be able to use the old Hades tower. I just have to
move all of my external hardware up 2 bays, so that the bottom two are empty.
Then I have to cut part of the bottom bays out and the Falcon board will fit.

Now I have another question. I know the Falconmother board cannot touch the
metal fram of the tower. I was thinking of using nylon parts (screws, nuts,
rings etc) to attach the board. Is this a good idea or is there something else
I could use?

What I am looking at is a 230 Watt PSU with a switch on the back. It has three IDE 4 pin connectors, one floppy connector and AUX connector. What is this AUX connector?. That should be enough for me I would think and I only need 4 connectors including the floppy. You can see it at:

http://www.supernotebook.com/micro-atx-power-supply-powermax-230-watt.htm

Tell me what you think.

I cant reach that webpage, gives me a 404.
If its a 4 pin AUX connector then its probably the extra 12V line
needed for some P4 motherboards. If that's the case a lot of that 230W
will be provided at 12V. Not something you need. Especially as it
means that the currents available at 5 and 3.3v will be greatly
reduced.

You can use nylon yes, in fact most motherboard standoffs are made of nylon, and if you can get these from a PC mounting kit, maybe it would be easier to use them. But, if you are going to mount the motherboard using the existing holes (please dont make any new ones :-)) then you can use metal hardware as long as the heads are not bigger than the metal surround of the hole, because all the holes are tied to the ground plane.

When my falcon was in a rack, I used metal machine screws to mount it.

Marc,

You are right!!
Simple feedback is much better then 20? or even 50? a year. I'm sure many
projects are stopped because of lack of feedback to the authors. I'm
talking here also about testing...

bye
Rafael

Whoops, should be:
 http://www.supernotebook.com/micro-atx-power-supply-powmax-230-watt.htm

I am going to order this one. I like the switch. I will just have to decide whether not or I am going to install it in the same spot the current PSU is or put it at the top like Lyndon did. It is a little smaller than the one already in there.

Oh, thanks for the tip. PC mounting kit huh. Sounds good. I will need something like that since I have some things that need mount like an Eiffel interface I bought on ebay and I still need to buy some hardware to extend the audio ports. Thanks for the tip...

Hi Rafael,

> talking here also about testing...

Yes, and writing docs or translation, these are things also non-programmers can do, but no one want to do it.:-/
So, I had to invest much time in translation and documentation, this time reduces the coding time.

Regards

My transfer of the files from my dying hard drive to my PC (via Ghostlink) and back to the new SCSI hard drive was successful.

The most difficult part was that using the GEM desktop, everytime it tried to read one of the random files containing a bad sector, it would give an error message and stop.

I ended up writing a small Turbo C app that would copy all files from one directory to another and if a read error occurred then log it and continue with the rest of the files and directories. There are probably many other utils that do this, but I didn't know of one off hand. If the program or source code would be of any use to someone else dealing with bad disks, please let me know.

One strange thing I noticed... When using Ghostlink, it doesn't seem to allow you to explicitly set a file's datetime stamp, which does appear to work when copying between local disks. I had added code to copy the file attributes and datestamp so they would be preserved.

Thanks to everyone who offered advise on dealing with this.

Jason Harmon

Hello,

Does anyone have the newest version of Calamus SL, version 5? I am having
trouble in getting it to print correctly using the VDIprint module. What I get
is squashed print that you can barely make out? It has got to be a setting
problem somewhere. I am using an Epson Photo 700 printer. It works fine when I
print with other program like Qed.

I have gotten MagiCMac to work under OS9.22 but have used it very little
on my Cube and then got the G5. Maybe not everything worked properly.
One thing I did notice that was not right was the CMD (Apple Key) - W
did not take me back to Mac OS like it was supposed to. Once booted
into MagiC I could not get back to Mac OS to eject a floppy properly.
Then again I did not really try and find out if there was a setting a
work around available at the time.

Agreed, I would just like to have a fully working Atari environment.  I
am consolidating machines in my office to the fewest setup as possible.
    Have just about everything working under MagiCMac would allow me not
to have a TT setup.  I am a MagiC user on my TT.  This way I can get
back into testing Highwire and other network apps.

Possibly your best bet would be an "Olde World" PowerMac or clone
(Pulsar, etc) that could run OS9 (and MagiCMac), and OS X (using the
OS9 Helper app).

I don't know if that utility will work with the later releases of OS X,
and if you decide to go this route and whack a faster processor in,
please check that it will actually work under OS X.

Hi Hallvard!

```
S>      SCSI-treiber V5.00
S>  (c) C. Brod, S. Engel 1994-1996
S>       compiled 03.12.1996 22:28
S>Initializing SCSI driver....
S>searching driver modules..
S>IDEot, ACSI, ALIA, TT, Falcon, MM,
S>scanning busses...
S>ACSI... 00
S>
S>
```

S>So what I'm wondering about now is: what file exactly is the above
S>referring to?

That's referring to the installation of the SCSIDRV interface, one stage before metados is even being started. So this looks like SCSIDRV doesn't like the optical drive without media inserted, as in the drive is answering somehow differently in this case.

If your HDDRIVER were a little newer (at least 7.0), you wouldn't need SCSIDRV anymore as it's functionality has been integrated. Perhaps that would solve your problem. You could try and test it with the current demo, but I don't know if that one has the SCSIDRV interface fully enabled.

With best regards
Ekkehard

Yes, the demo version of HDDRIVER 8.2 is suitable for this test.

I see.
What exactly is MMC? Wikipedia didn't have any entry that made sense
in regards to this issue.
I've used that writer for years with a Mac together with Adaptec Toast
software. Worked fine for all sorts of stuff. I even backed up all my
Atari software on ISO 9660 CDs which are readable on the MegaSTe.

Would a modern IDE CD (or DVD) writer be better to use?
I'm looking into ways to get IDE support in my ST, but haven't quite
gotten there yet.
Are there any SCSI CD writers with MMC support?

> I figure that 4416 is supported with my Cdrtools port but it's slightly

You're right!
With the demo of HDDriver 8.2 the computer no longer freezes if a CD
isn't inserted in the CD-ROM drive when it's booting!
Looks like I need to update HDdriver.

Instead of freezing I now get an error message when Spin! is loading:

```
   BOS error: device not responding
   This driver is not installed
```

So even if I install a CD into the CD-ROM drive later I can't read it.

You mentioned using Spin! together with HDdriver yourself; have you encountered the same limitation as well as not being able to read CD-RW discs? If not, perhaps the drive itself (CRW-4416) is the reason behind it all as, in another thread, I was told it's not an MMC compliant drive, whatever that is.

Hallvard

Since the CD-ROM driver does not know (and thus does not care) whether a
CD-RW or a plain CD is inserted I assume that your drive does not
support CD-RW discs.
MMC is (as far as I know) a set of standard commands CD-ROM drives are
supposed to support. It may perfectly be possible that SPIN! only
supports MMC-compliant drives.
I do not use a CD-ROM drive with my Atari anymore, so I cannot go into
detail.

It means "Multi-Media Commands". Before, each manufacturer created his own commands to burn.

> I've used that writer for years with a Mac together with Adaptec Toast software. Worked fine for all sorts of stuff. I even backed up all my Atari software on ISO 9660 CDs which are readable on the MegaSTe.

Because your tools managed the classic 4416 burner and cdrom read is standard.

> Would a modern IDE CD (or DVD) writer be better to use?
> I'm looking into ways to get IDE support in my ST, but haven't quite gotten there yet.

Should work if SCSIDRV find your drive and your drive is MMC compliant in the case of Cdlab.

> Are there any SCSI CD writers with MMC support?

Yes, HP cd-writer 9600 maybe 9200.

> > I figure that 4416 is supported with my Cdrtools port but it's slightly complicated.
>
> I prefer easy to use setups :-)

My tutorial is only in french sorry.

Does anyone know what the difference was between the ICD Link
and Link 2 adapters? Also is "The Translator 2" a DMA->SCSI
adapter (which looks very similar to the ICD Link) the same as a
ICD Link 2?

Cheers

AFAIK the difference between Link & Link2 is that the 2 has an LED to show
when it's receiving power on pin? and it handles parity. From my long term
memory, could be wrong.

Never heard of the last one.

Is your garage full of Atari? Can you squeeze into your attic? Do you have an Atari in your closet? If your Atari stuff needs a new home, especially if your in Portland, Oregon USA! E-Mail Atari@aracnet.com or call Ben at (503)256-9974! And even if your not in Portland, feel free to contact Ben.

This covers Atari Hardware, Games/Software, Books & Accessories! Classic Atari 8 Bit and Atari ST Computers Plus Atari Jaguar Games and consoles!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

Hi - I have a STe fitted with the TUS Veloce+ accelerator,
and cant seem to access the 2M FASTRAM on the
board. I'm guessing I need some kind of driver to switch
the RAM on - does anyone know where I could get this?

Thanks

jao

IMO, you should get at least an ICD adapter. That will support almost all SCSI hard disks and a good bit of other SCSI stuff too. If you can afford it (and if you can find one), you might consider getting a Link97 instead. It's upward compatible with ICD adapters, and also supports SCSI arbitration. This will allow you to connect those devices which require arbitration (such as most/all CD/DVD recorders & the Daynaport SCSI/Link).

FYI, the Link97 (like the ICD Link/Link2) is contained in a case at the end of a cable, so if you go this route (or choose an ICD Link/Link2), you'll only need to fit drive(s) into your Megafile case.

>

The CRW-4416 is in fact MMC-compliant, but I don't think that's the issue here. Are you *absolutely* sure the drive isn't broken? The drive is responding to an INQUIRY command (that's where HDDRIVER gets the drive name from), but it's possible that it won't respond to other commands. Try it on another system with a known-working SCSI chain and see if it works.

BTW, the usual reason for not being able to read CD-RW disks is using an old drive. CD-RW disks have lower reflectance than CD-R or CD-ROM disks, and older drives just couldn't pick up enough signal. But we're talking about pre-MMC drives here, pretty old stuff ...

What I was able to find was an ICD AdSCSI ST adapter. It looks small enough
that I may be able to fit it inside the MegaFile case. I have a 4GB SCSI
drive that I am going to attempt to use, and if possible will run the cable
out of the case so I can daisy chain other SCSI devices to it.

Thanks - I think "The Translator 2" is just a Link 2 re-badged but might be wrong on that.

I used it with a 68K Mac a few weeks ago without any problem, but sold
that computer and currently don't have any other SCSI equipped
computer which I can test it on.
Is there any testing software for the Atari ST which can be used to
check the drive?

Hallvard

I have decided to make the latest version of my USB mouse driver
available for public download. This is considered an ALPHA release.
There are things to fix, things to add etc, but it is useable and
works on ST/TT/Falcon with EtherNat or NetUSBee, in TOS and MiNT. As
for MagiC, you'll have to try it, I don't own it, so I can't develop
for it.

Get it from the downloads page on http://www.janthomas.org.uk/ and
don't forget to read the text file before you install it!

Obviously, if you don't have an EtherNAT (http://nature.atari.org) or
a NetUSBee (http://hardware.atari.org) there's no point in downloading

it!

Please let me know if you are using it (via the email address on my
website, NOT the gmail spamtrap address I use for usenet).

Many thanks for your patience and for being unwilling ALPHA
testers! :-)

Coda.

Hello,

Here is a new SDL release, available on my web site:
- Teamtap support (4-joypad adaptors).
- Fixes in mouse and keyboard management.
- Save and restore FPU registers in audio and timer interrupts.
- GEM: allow creation of windows bigger than screen resolution.
- GEM: better mouse grab.
- And more fixes not specific to Atari version.

Thanks to Keith Scroggins for the intensive tests with Scummvm and
Openttd :).

Actually I have the original drivers, but they no longer
work (dates seem to be up to 1999 only). I'm wondering
if there are any patches available?

Thanks

jao

Here's a post from Aly from Sept. of last year:

"The problem with th FMCII software is that it won't go past the year
1999.
The hardware RTC is fine, just that the software can't set it.

SOLUTION.

Edit the file FMCII.PRG with a hex editor.  Find the first two
occurences of
63h  Change these to 6Eh.  And save.

Your FMCII.PRG program can now set dates upto 2010.  :-)))  2006 is
106 in
the FMC software.

Yayyyyyyyyy!!"

Web Archive is doing what Hexstar wants to do. If you know the
original webpage, most of the info on it will have been archived since
aobut 1999. The only exception would be material that the author of
the webpage never wanted to be archived.

Hi Aly, I couldnt see how to download of the forum. Is there some
trick to that? I am registered. Thanks jao.

Hi,

calimero wrote :
> Maybe this will be the last machine that M$ will ever produce.

Ho, Yes. There never will be a better M$ box than the "Falcon"
Xbox360. Anyway the leader of the market is not in very good
position ;)

> Just like Falcon was last computer that Atari produce :)

The Falcon code name was certainly a name given on purpose.
We all know that same causes are producing same effects. So
will it be a good or a bad thing ? Ho well, for me never mind,
I own a PlayStation3 on which I'm willing to run ARAnyM. I'm
convinced to have made the good choice.

Regards,

Soooooo, if I make a Wii build of hatari (because I got a Wii this
month), will that be a bad thing? AFAIK it doesn't have anything to do
with the name "Falcon".

Please make a Wii Hatari build. If you know how ;-) cos you can't do
homebrew on Wii yet (unless in GC mode). :-/

Hello,

Has anybody tried and successfully gotten MagiCMac for OS9 to run on a PowerMac in the Classic environment from under OSX? My issue is that I just recently upgraded machines from a G4 Cube to a PowerMac Dual G5. The G5 does not boot natively into OS9. So from OSX I can start the Classic environment (OS9) and try MagiCMac but all I get is a white screen and the system appears to freeze. I never ran Classic on any of my G4 Macs before. If I wanted OS9 I'd just boot into it. Earlier this year I got MagiCMac 6.20 for my Cube and was trying to get MacStip running when I bought my PowerMac G5. Now I'd like to start back where I left off with MagiCMac for OS9 but can not seem to get it running on the G5. I did try some other OS9 apps like iCab and Internet Explorer for OS9 and they appear to run just fine so the Classic Environment seems to be loaded properly on the G5.

Hi,

I'd like to know what is the capacity of this Hard drive (20Mb?)
and what technology is inside: SCSI? (Cause I'd like to change the drive
with a greater one but keeping the DMA adapter)

Guillaume.

That's actually a bit of a tough question.

Firstly the SH205 uses a 20Mb MFM drive, in general these drives are pretty good.

The controller is quite complex, it converts ASCI to SCSI and then to ESDI (which the MFM drive uses)- but might be wrong on that.

I heard stories once that it was possible to adapt the controller to use with SCSI drives, but not sure on that.

Perhaps there is someone more knowledgeable who can help.

Cheers

jao

I built a my first HD with a 60MB Seagate RLL drive and Supra Host Adapter. The HA converts to SCSI. Then a card inside the case translates to the RLL drive. The card is actually the SCSI device. AFAIK the card was just miniaturized to where it could be put on the drive making it a SCSI device. Connecting a HA directly to a SCSI drive(s) is all that's needed.

Don't think the Atari HA is a good idea , even if physically possible, but leave that to those more knowledgeable. The HA will need to support the new drive.

On my later SCSI drives just used 50 conductor ribbon cable, a 50 pin IDC connectors on the drive and 2(if needed) 50 pin IDC centronics connectors on the outside with a Link HA on one of them. A centronics connector could be run to the outside from the internal HA as well. Come to think of it, did do that with the Supra too before getting the Link. Then there's termination.

I've also got 135&230MB SyQuests, a Floptical, 2 CD-ROMs and a 540MB Quantum drive in an Atari ST 3.5" floppy case that can be chained. The Quantum requires parity so can't be used with either of these HA, unfortunately. Also unfortunate that it's been a long time since playing with them.

Hello all;

Version 3.92 of TeraDesk open-source desktop for the 16-bit and 32-bit lines of Atari computers is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

This release brings a small change (just five lines of code) made to set TeraDesk in agreement with Didier Mequignon's PICDESK utility for displaying desktop background pictures. Recently, an inquiry from a user made me aware of the existence of PICDESK, and it turned out that TeraDesk was already pretty much compatible with it- the picture was displayed, but there were some bad redraws. Only small corrections were needed to fix that.

See the history file and/or the hypertext manual for more information (i.e. how to set TeraDesk to enable display of desktop background pictures).

Btw. it seems that there is a bug in PICDESK: if it is set (and configuration saved) to display a monochrome IMG picture, on the next startup it attempts to display a GEM picture instead- and so nothing happens until a picture file is manually reselected.

Bbtw. PICDESK is not needed if one is using MyAES; that AES has a capability to display desktop backgropund pictures. Also, it seems that PICDESK does not work with XaAES (but is ok with Atari AESes, N.AES, Geneva and MagiC).

In TeraDesk 3.92 there are also some other small improvements and bug fixes.

Have fun.

I'm trying to do something similar to you now.

I have a MegaFile 60 with a dying drive mechanism. From what I understand the SH 205 is a MegaFile 20 and may be very similar to what I have. The mechanism in mine is a 5.25" 60MB RLL drive. From what I understand, the controller in this drive serves two functions. It converts ACSI to SCSI, and then connects SCSI to RLL. However, since this logic is internal, I don't know how feasible it would be to try to modify the board to be able to connect a SCSI drive to it.

I just got an ICD AdSCSI ST host adapter, and am planning on ripping the guts out of the case and installing the ICD board and a 4GB SCSI drive in the case.

-Jason

How often must I still repeat myself? MacSTip as a part of MacTCP-Connect is a crude hack that runs only with Old World ROM machines! Your Cube simply isn't an Old World ROM machine and therefore MacSTip won't work on it - there's definitively just no way...

--------------------- <nibble here off> ---------------------
All Macs prior to the iMac use Old World ROM, while the iMac and all subsequent models are New World ROM machines. In common use, the "Old World" designation usually applies to the early generations of PCI-based "beige" Power Macs (and sometimes the very first NuBus-equipped models)
--------------------- </nibble here off> --------------------

� <http://en.wikipedia.org/wiki/Old_World_ROM>

Well, the way I heard it is that the wii devkit is due out next month, it'll cost about $250 and it'll have some hardware too. Doesn't sound TOO bad actually :) (although someone will have to build libSDL for it ;)

In my quest to replace my dying MegaFile 60, I've put together a new hard drive system based on an ICD AdSCSI ST connected to a 4GB SCSI drive. I've got the new drive configured with the latest ICD SCSI drivers, a 16MB boot partition, and a whole bunch of 256MB data partitions.

The big question I have is on how I can transfer data between my old drive and my new one. Let's ignore for the moment all the bad sectors, etc on the old drive.

Is there a way to connect both the ICD AdSCSI and the megafile at the same time so that I can just copy files between the drives? I had tried to daisy chain the MegaFile from the "out" port on the ICD adapter, but when I did that the system would not boot from either hard drive.

Any useful pointers would be appreciated.

Thanks.

Jason Harmon

My mistake I meant MacTCP-Connect I wanted to set up. I know what an Old World Machine is as I have a couple 8500-120, 9500MP, and a 9600-200 which any of them could then run Mac-Stip. How then did Bengy at http://www.magical-sides.de the old MagiC Support Site run MacTCP-Connect on a G3-333 iMac? That was not an Old World Machine?

Like my original post said I had just gotten MagiCMac for OS/9 and was trying to setup up the TCP/IP connection with the Mac OS and MagiC when I got a new machine so I never did actually get it working. It appears that on my new G5 it is not possible to run MagiC under the Classic Environment. Stinks but not really that big a deal as I have other Macs in my office that I can run OS9. I would have just preferred to have as much as possible running on my G5.

If MagiCMac for OSX has TCP capability then I may be willing to spend the money to purchase it.

I have heard that Magic Mac won't work with OS 9.2. But it may work
with a version of OS 9 up till 9.2, like 9.0 to 9.1.x
Classic is always going to be 9.2

> in my life.
Yes this is really incredible, I know Francois for a long time now, this
was a good guy really! But there is something broken somewhere! He
should turn the page of Atari life I think for his health.
>
```

> The reality is that we hate the French because their country is bigger,
But it's small, you should hate USA, RUSSIA, CHINA, AUSTRALIA .... ;-)
> their wines are better
This is true :-) but you have mussels - French fried potatoes (is it
good ?, I think this more Belgian than French!)
>and their women are more pretty.
Really, you probably not visit Belfort, really it's not fantastic here!
>Though I have my doubts about the latter.

Friday, July 13th 2007,

Today, it is not a day of bad luck because there is the new release of
Studio Son for your Atari Falcon.

Studio Son 2.093b is available in the wonderful french language:
http://doyeuxyvan.free.fr/studioson/std2093b/STD2093F.ZIP

The english version can be found here:
http://doyeuxyvan.free.fr/studioson/std2093b/STD2093E.ZIP

You can, of course, find the classic 68030 and 68030+68882 versions in these archives.

I have performed a lot of hard tests to check the quality of my algorithms. I have written a lot of different DSP and C programs to obtain correct results. But, it is still a beta version, so be careful with your samples !

This version has been tested with an original Falcon 030 with a 68882 coprocessor. The CT60 card is not officially supported.

Bugs fixed:

- Better WAV, AIFF and AVR formats implementation.
- Space disk remaining bug fixed.

New features and bugs fixed:
(since 2.09b version)

- Rewritten "Apply Effect" function. Studio Son does not need a temporary file any more.
- You can now create with "New Sound File..." blank AIFF, WAV, TRK, SND and AVR files. WAV files created are always 8 bits unsigned and 16 bits signed with little endian format (Intel). Either are always big endian format (Motorola).
- You can create you own sample frequency.
- New management of external DSP effects.
- New useful alert boxes added.
- AU/SND files header write error fixed.
- Several loop errors.
- The approximative hi-speed play has been disabled.
- Icons draw bugs.
- Intempestive play.
- DSP effect restore bug after effects changes during a play.
- Reverse stereo with Invert function.
- Block undraw after a Scrub.
- Undo after the "Replace" function.
- Reverse stereo of echo-delay DSP effect.
- Record from cursor.
- Pause with SPACE while recording under Magic.
- Crashs when filtering under Magic fixed.
- For a resample process under Magic, internal file management fixed.
- Significative noise reduction of plopping sounds as long as you use Studio

Son.
- Management improved of AIFF files compatible with Cubase Audio. These files are now saved with a physical size rounded to 1024 bytes multiples. Useful to prevent crackling noise when you import your AIFF files with Cubase Audio.
- Buggy "Scrub" function rewritten. No crash occurs.
- Reverse stereo bug for a "Scrub" fixed but still in beta test mode.
- Buggy "Cross Fade" function improved. Autocorrection for wrong parameters. The UNDO is also correct.
- Cut, Copy, Paste, Insert and others have their UNDO bugs fixed.
- Bug of the current working folder fixed. (After an Insert for example)
- DSP effect after a Resample and Filtering is now restored with no problem.
- Overall settings saving are now re-enabled ! Up to date, you MUST keep the STUDIO.SYS folder.
- Rewritten "New Sound File" function. You can now create a file with the fileselector, choose a frequency, ...
- Rewritten "Apply Effect" function. Sample gap subtly fixed. Due to the DSP real time application of this function, it is obvious that it remains a very small gap into your final sample. This gap is usually filled by zero values as it has been thought for this rewritten function. So, it's not recommended to apply an effect to a block selection.
- Markers management bugs fixed. (Delete, saving and loading procedures)
- There was play error with "Preview Cut" function. It's now okay.
- Block selection with SHIFT+TAB to the next marker has been debugged.
- Sample time length is now updated after any UNDO.
- Little bug fixed during a play actived by the space bar with an exported sample from Studio Son.
- Resampling function added (Linear Interpolation).
- Resampling function includes a filter and linear interpolation code in only one DSP program.
- You can resample from 2 Khz to 192 Khz.
- WAV files opening issue fixed.
- Huge undo bug fixed.
- Huge bug of the volume of mono samples filtered fixed.
- FIR filters (Low Pass, High Pass, Band Pass and Band Reject) up to 2048 coeefficients.
- Resample process can be followed by a LowPass filter up to 1024 coefficients.
- DSP Filter algorithm improved. The speed of the treatment have been increased. Now you can enjoy a good optimization of the filtering process.
- The end of the sample is now truly filtered.
- Vu meter clipping problems fixed.
- The cursor running is now correct when sample frequency is not the same as the system frequency.
- Desktop background pattern modified to improve the work in monochrome.
- Redraw bug of the desktop in monochrome corrected.
- Several dialog boxes fields bugs fixed in monochrome.
- Crashs at very high zoom levels fixed.
- You can now really select all the sample with the mouse.
- You can now really place the cursor at the end of the sample with the mouse.
- Wrong size of the blocks at the end of the sample corrected.
- You can now create a block with a "one sample" size when you make a long

click on a part of the sample.
- New alert boxes for the Filtering and Resampling function.
- New internal undo for the Resampling function.

New function "Resample..." allows you to change the frequency of your samples with a linear interpolation and an optional Low Pass filter.
The "Filtering..." function enables you to carry out FIR filters (Low Pass, High Pass, Band Pass and Band Reject).
This is performed by the DSP 56001 and with Direct to Disk process.

Known bugs:

- No sound when playing very high frequency samples.
- Slowly WAV files opening.
- Selected block after a resampling task is not deleted.
- Sample duration and time counter are wrong when the system frequency doesn't match with the sample frequency.
- Unable to reduce physically the size of a sample when you cut blocks.
- In the time counter, the value 99 is followed by 10.
- Several little bugs into the sample window.
- The icon of the function "Generate Low Frequencies" differs with the colour of the resolution.
- Little bugs of sample drawing.
- Random error messages when filter steepness is very low.
- Minor bugs.

Up to date, you MUST keep the STUDIO.SYS folder with Studio Son program file.

If you are using Studio Son on a single TOS, I strongly recommend the launch of ARROWFIX.PRG in the AUTO folder:
http://doyeuxyvan.free.fr/studioson/std2093b/arrfix15/

If you are using NVDI, just run ARROWFIX.PRG after this.
Otherwise, GEM must be copied in RAM with the program GEMRAM.PRG before running ARROWFIX.PRG:
http://doyeuxyvan.free.fr/studioson/std2093b/GEMRAM16/

If you have troubles to run Studio Son under Magic, you can use the patch DSPSLOW1.PRG by Centek included into the package or you can find it here:
http://doyeuxyvan.free.fr/studioson/std2093b/DSPSLOW1.PRG
Don't run DSPSLOW1.PRG if you launch Studio Son under TOS otherwise you might have display or DSP locked issues.

You can also use the nice DSPXBIOS patch by Didier Mequignon:

http://perso.wanadoo.fr/didierm/files/dspxbios.zip
http://doyeuxyvan.free.fr/studioson/std2093b/dspxbios.zip

If you use an external clock, run FDI_INIT.PRG into the AUTO folder:
http://doyeuxyvan.free.fr/studioson/std2093b/FDI_INIT.PRG

FPATCH2.PRG is now included in the package.

You can also download self-extracting STZIP unpacker:
http://doyeuxyvan.free.fr/stzip26/STZIP26.TOS

Have fun !

Yvan Doyeux

IIRC, the maximum hard disk partition size supported by TOS 1.0 is 16MB. I understand that later TOS versions increased this limit, but I haven't located definative information on what the max sizes supported by the various TOS versions are.

Does anyone know the maximum partition sizes supported by TOS 1.4 and 2.06?

I have a spare 4GB SCSI mechanism that I am am planning on hooking up to an ICD ADSI adapter, and would like to get an idea of how much of that space will be usable.

Thanks.

Jason Harmon

Well I have a 4 gig hard drive formated with all 500 Meg partitions and it
works fine. I am using TOS 2.06

The maximum for TOS 1.04 is 256 MB, for TOS 2.0x and TOS 3.0x it's 512
MB, for TOS 4.0x it's 1 GB. Bigger partitions are possible when running
MiNT or MagiC.

Many thanks for your hard work!

P.S when you say the CT60 'not officially supported' I am wondering if
you have a CT60/3 to test with? Is it known to work, or are there
known problems? I am asking because I can probably find some time to
test it on my CT60 falcon at some point.

I successfully installed the necessary software to be able to read from an external SCSI CD-ROM drive a few years ago, but I can't remember all the details and am now trying to figure out an irritating fact.

Everything works perfectly if:

a) the CD-ROM drive is turned on

and

b) a CD (with readable IS-9660 data on it) is inserted into the drive and is ready for use.

However, if the drive isn't on when the computer boots, then the drivers aren't loaded and I'm unable to use it later, when turned on. I guess this sort of makes sense even though it would be nice to have the drivers load regardless of the CD-ROM's current status.

The next problem is more frustrating however..

If I *don't* have a CD inserted in the CD-ROM drive (or the tray is open), then the driver software won't load either! Actually the computer seems to freeze at a certain stage in the boot process.

Here are some more details of my setup:

The computer is a Mega STe with an internal SCSI drive connected to the original internal Atari SCSI host adapter card. It's set at SCSI ID 0 and is unterminated, just as I've read and been told numerous times (failing to un-terminate the drive can lead to burning up the host adapter I've been told).

The SCSI CD-ROM drive (actually a burner) is connected via a Link 97 to the ACSI port on the rear of the Mega STe. I also have an ICD Link II, but it didn't recognize the CD-ROM drive, so I suppose it uses arbitration, which the Link 97 supports, I've been told. The CD-ROM drive is set to SCSI ID 3 and is terminated.

When it comes to software I've first got HDdriver 6.13 which, when booting, gives me the following information, which tells me that it recognizes both SCSI devices:

```
  ACSI 0.0:  Quantum LPS540S
  ACSI 3.0: Yamaha CRW4416S
```

Next, it loads a bunch of AUTO programs, the ones concerning the CD-ROM drive being as follows:

```
  Atari MetaDOS  (April, 2 1997)
  Version 2.74
```

... and then:

```
  Spin! /SD 0.34
```

... and finally the one which gives me problems:

```
  SCSI-treiber v5.00
```

.... with a CD inserted I get a bunch of confirming messages, but
without a CD inserted or the tray open when the CD-ROm drive is turned
on I get the following message which stays there indefinitely

```
  Scanning busses....
  ACSI... 00
```

At this stage, all I can do is reset the computer.
Is this normal behaviour of this setup? I know there are other
software solutions around for enabling CD-ROM reading support, but I
was aiming for a free one, at least to start with.

Hal

Actually I just noticed that if I turn off the CD-ROM drive, the boot process continues with a "not loaded" message concerning the CD-ROM driver.

It's works on CT60 but the code is not optimized for 68060.

Please note (you might have missed it) that *any* TOS 1.0x version
supports partitions of 256 MB, i.e. the TOS 1.00 and 1.02 ROMs also
support 256 MB partitions.
Using TOS 1.04 or newer is nevertheless a good idea.

Hmm... I thought I had seen information that said that due to a bug or limitation in TOS 1.0, that the maximum partition size was 16MB. That is not accurate?

Thanks.

I had problems before trying to boot my Stacy with a partition >31Mb,
I think at the time I was using AHDI. I don't know if there was any
reason for this, maybe something I did.

There were limits with RAM-based (i.e. the very first) versions of TOS,
and maybe with very old drivers. But with a ROM-based TOS and a driver
not older than maybe 15 years it should work.

This is what we have. CD support is far from satisfaying. You should go on some comercial solution.

Writing CD drivers from hobby is simple not possible - there is too much documentation required. It costs time and money.

Everybody is free to try these values (provided one finds a software that allows creating these partition sizes for TOS 1.04 and 2.0x). I do not recommend it because one risks a loss of data. The permitted partition sizes have been well-known for years since some people had a close look at TOS and the maximum values in particular for the number of bytes per sector and the number of sectors per cluster.

Julian Reschke's SPIN! is (or at least was) available for free, which

IMO means that he wrote it as a hobby. I doubt that writing a CD-ROM driver needs more time than writing a hard disk driver, and there are also free hard disk drivers.

By the way, there is a way to use data CDs without a CD-ROM driver, but it requires a CD-ROM drive that supports 512 physical bytes per sector. In particular with old CD-ROM drives there were jumpers to configure this. With such a drive one can write a sector copy of a hard disk to the CD and then boot from it with HDDRIVER.

Hi,

The ATARI Virtual Machine i.e. *ARAnyM* was updated in its 0.9.5beta version. The Mac OS X build called MacAranym is available /Universal Binary/ for Intel _and_ PPC computers.

Release in dedicated place <http://eureka.atari.org/MacAranym.zip>
or at the source of its GNU/GPL development <http://aranym.org/>

Best ATARIan regards,

The issue isn't that I want to boot directly from a CD, but rather
that I don't want the computer to freeze if it boots without any CD in
the CD-ROM drive.
Will buying commercial CD-ROM software ("Extendos" from Anodyne?) do
away with this problem?
Is there other software that I could try out to see if it solves my

problem?

I think so, just ask Anodyne. The computer freezing is definitely not normal when no CD is inserted. I have never had this problem with my Atari.

> Is there other software that I could try out to see if it solves my

You can also try out SPIN!, but I do not know a current download link.

Sorry, but that's IMHO still just bullshit! Try this:
<http://doyeuxyvan.free.fr/cdrtools-1.10/scsi-atari-0.3.c/>

Saluti-gerulus

  I will gladly try it. Just missing couple things: SCSI CD drive and
French knowledge.

I correct myself: writing CD driver which will work flawless for more
than 50% of Atari users is very demanding. Free solutions what I tried
are very limited.

What kind of software are you using in order to read CDs?
If this behaviour isn't normal then I might have entered something incorrectly in the config files.
Anyone else using free CD-reading solutions and *don't* have the same problems as me?

I also noticed that I can't read CD-RW discs. I tried burning a CD-RW disc on my Mac, using the ISO-9660 level 1 format just to be sure I wouldn't get any problems, but the CD looked blank when attempting to read it from the Atari ST CD-ROM drive (Yamaha CRW-4416 SCSI CD-writer).

> > Is there other software that I could try out to see if it solves my
> > problem?
>
> You can also try out SPIN!, but I do not know a current download link.

I believe that's what I've been using all along.
I really can't remember the details of my setup, but IIRC I needed several pieces of software in order to make a complete setup able to read CDs; HDdriver is a crucial part of this, isn't it? I'm using version 6.13.

Looking into my AUTO folder I find the following configuration files:

BDCONFIG.SYS	(BetaDOS ASCII config file)
BD9660F.SYS	(part of BetaDOS? A binary config file or something)
ISO9660F.DOS	(also part of BetaDOS? Binary file)
CONFIG.SYS	(ASCII config file for Spin!)
METADOS.PRG	(BetaDOS? MetaDOS?)
SPIN_SD.BOS	(Apparently a file belonging to Spin! Binary)

I think that covers it.
I don't know of any current site/FTP location that carries Spin!
either as I just installed it from my own download archive throughout
the years. I don't know if there's any newer version than 0.34 which
is what I have.

Looks like a file leech dressing it up as a good willed vintage tech/info
preservationist. All that information can be easily found elsewhere in
vintage computing community proven archives, and if it is not, then it means
that there are a couple of copyright hurdles that prevent from doing so -
got to respect that regardless of we enthusiasts liking it or not.

  Thanx. On some forums and Wiki sites are those 'optimistic' values.

It will make some discussions there...
Just to add that myself observed troubles with 1GB partition under TOS 2.06.

boy, you're still wasting your life, aren't you?

still also waiting for Apple to die? After all, you predicted that Steve Jobs would "destroy Apple before he even got started" and called him an "arrogant bonehead". (Even funnier when Steve helped turned Apple's fortunes around and you began licking his boots :))

Still waiting for Sony to license Virtual Game Station?

And how about Mike Harris (now totally disgraced after Ipperwash) and Conrad Black (expected to be growing old in the pokey for a long time after being found guilty for the behavior I complained about and you poo-pooed as "jealousy")

Oh, and how about that Pointcast "wiping Atari users off the face of the Web"? Too bad that it crashed and burned while Atari users are still surfing the web :)

Oh, have you checked out that Canadian dollar? Soon to be at par with the US and expected to surpass it thanks to the efforts of your moron president - whose only saving grace seems to be that he's at least smarter than you :)

yep, same ol' iDiot Forever Known As Sinclap. Still a clueless little troll without two rocks to rub together for brains, and still being laughed at by Atari users (not to mention any women when he tries his stupid "macho stud" talk).

Go home, son, joke's over :)

Sounds to me like your computer is treating an inserted CD ROM disk as
a removable drive, and is barfing when there isn't a disk inserted, or
the tray is open.

I can't speak for the combination of drivers that you have, but
Anodyne's has a setting in the config which allows the continuation of
booting in case of error IIRC.

You mean the CD disc itself, and not the CD-ROM drive?
I suppose the drive should be treated as a removable drive, but not the disc itself. So perhaps the computer is *not* treating the CD-ROM drive as removable media, but as a normal hard drive, and since the data is missing (i.e. the CD disc isn't available) it freaks out.

> I can't speak for the combination of drivers that you have, but

> booting in case of error IIRC.

I might have to buy Anodyne at some stage if I want to burn CDs (which again depends on how successful I am at setting up some kind of networking connection with my Mac), but I want to keep on trying this free solution.

As for my setup files, perhaps someone can see if there are any obvious mistakes which is causing my problem.

First, here's CONFIG.SYS which resides in the AUTO folder:

```
; Beispielkonfiguration f=FCr SPIN!
; CD-ROMs auf ACSI 3
*BOS, c:\auto\spin_sd.bos, A:3

; als logische Laufwerke X: installieren
*DOS, c:\auto\iso9660f.dos, X:A
```

.=2E. then there's BDCONFIG.SYS which is also found in the AUTO folder and is a lot longer. Those are the two ASCII config files.
I don't think any of the other files are user-editable, so I can't have made much damage there ;-)

```
;-----------------------------------------------------------------------=
--
;File name: BDCONFIG.SYS         Revision date: 1998.08.27

;Purpose:   BetaDos configuration      Creation date: 1998.02.27
```

```
;----------------------------------------------------------------------------=
--
;(C)1998 by Ronald Andersson        Email:   dlanor@oden.se
;----------------------------------------------------------------------------=
--
;The first four entries are commented out, partly because you may not
have
;a CD-ROM to use them for, and partly because I have no distribution
rights
;for the BOS drivers.  They are from the SPIN distribution by Julian
Reschke
;and from ExtenDOS, and are what I use for CD-ROM access on my
Falcon030.
;
*BOS, c:\auto\cd.bos, A:3.0
;;;*BOS, c:\auto\spin_sd.bos, B:14\0
;;;*DOS, c:\auto\unidrive.dos, X:A
*DOS, c:\auto\bd_9660f.dos, X:A
;
;One DOS driver above is my own, and is a slightly improved ISO9660F
version.
;This has been completely restructured, so as to simplify adding new
abilities
;(when I get time for that) such as support of long filenames and
Dopendir etc.
;
;The filesystems below are my own, though 'Cook_FS' was inspired by
Julian
;Reschkes 'CookieFS'.  His pioneer effort in producing new DOS sources
gave
;me the impetus (and needed knowledge) to start the BetaDos project.
;
;Cluster.DOS implements a drive that holds a 'cluster' of other
drives, that
;are presented as subfolders, similar to the U: drive of MagiC and
MiNT.
;The main difference is that this one works in SingleTOS as well...
;As yet many features of U: are still missing of course (\proc, \dev,
etc.),
;but some of these will be added later (especially link stuff).
;
;For SingleTOS users I recommend editing the 'V:0' of Cluster.Dos to
'U:0'...
;Or like me, use both.  V: can also be used under MagiC and MiNT, so
it has
;proven a useful medium for symbolic links that can be used
identically in
;all available TOS systems, with or without multitasking.  I use it a
lot !
;
*DOS, c:\auto\cluster.dos, V:0
*DOS, c:\auto\cook_fs.dos, X:1
;
```

```
;Cook_FS is just another cookie filesystem, based on exactly the
principles
;and methods in Julian Reschke's CookieFS.  It has been completely
recoded
;though this did not motivate many changes, except where it concerned
the
;new object linking method, which enforced some changes.
;
;As yet these filesystems can be considered FreeWare, but I make no
promises
;as to what policy I will apply regarding future versions...
;
;In addition to the 'classic' MetaDOS commands, BetaDOS now also
supports a
;new command '*SLB,' Identically to how that has been implemented by
Julian Reschke in his MetaDOS enhancements. So BetaDOS remains MetaDOS
compatible.
;
*SLB, c:\auto\slb_load.ovl c:\gemsys\magic\xtension
;
;Only one such command per BDCONFIG.SYS file is meaningful, and the
path at
;the end specifies the default path BetaDOS will look for .SLB files
in. If
;the SLBPATH environment variable is used, this replaces the default
path
;with a proper path list. The *SLB, command is still needed though,
because
;if it is not used BetaDOS will ignore the new GEMDOS functions
Slbopen and
;Slbclose, so the shared code libraries will not be accessible then.
;Thanks go to Julian Reschke again for providing much info on the SLB
stuff.
;----------------------------------------------------------------------------=
--
;End of file:  BDCONFIG.SYS
;----------------------------------------------------------------------------=
--

Hi Hallvard!

```
S>; Beispielkonfiguration f=FCr SPIN!
S>; CD-ROMs auf ACSI 3
S>*BOS, c:\auto\spin_sd.bos, A:3
S>
S>; als logische Laufwerke X: installieren
S>*DOS, c:\auto\iso9660f.dos, X:A
```

I don't recommend using letter A for the XBIOS drive letter, albeit Julian states otherwise in spin.txt. Instead, I've set it to the same as the actual drive letter of the device. So, I'd set

```
; Example configuration for SPIN!
; CD-ROM on ACSI 3 as XBIOS drive X:
*BOS, c:\auto\spin_sd.bos, X:3

; install as logical drive X:
*DOS, c:\auto\iso9660f.dos, X:X
```

Will avoid any misinterpretations, too :-)

MetaDos will read config.sys, and subsequently start spin_sd.bos and iso9660f.dos with the parameters given. Spin_sd is the driver for the hardware, iso9660f implements the CD filesystems.

S>... then there's BDCONFIG.SYS which is also found in the AUTO folder

S>and is a lot longer.

That's for BetaDos, and I haven't fiddled with that one myself.

With best regards
Ekkehard

Hi

For years I always wanted a cool T shirt with the Atari logo on...
even moeso when Atari disappeared!

So I have just got an iron-on transfer film sheet and thought I'd
have a go at doing my own. BUT anyone got a large logo equivalent of
what, 48 point or higher? I could get away with equivalent of A5 for a
Medium standard T shirt...

Any colour, just the Fountain logo would do...

Thanks if you can help

Mark

What I find amazing is that there are any discussions at all. For more than a decade there has not been a new version of TOS and the partition size limits for all existing versions of TOS are well-known. These are limits hard-coded in TOS, i.e. they will not change anymore.

don't use that word - last time he heard it, the little weinerhead went
and bought a three-piece suit and tie :)

Along the lines of a Syquest or Zip drive without an inserted disk.

I think you will have to buy Anodyne's solution TBH.

I totally agree! Looks a lot less confusing now :-)
Thanks.

> the hardware, iso9660f implements the CD filesystems.

So the whole CD-ROM driver thing is based on a "modular" system rather than a single driver file! Pretty smart as it should make it easier for people to add new "modules" with additional features :-)

I just found out that my version of BETAdos (not METAdos) wasn't the latest one available. I had version 3.09 while I located and downloaded 3.12 at the Belgian FTP server's CD-ROM directory (ftp://kurobox.serveftp.net:3021/utilities/cd-rom/) which incidently also carries Spin! in case others reading are interested (the author's (Julian Reschke) website is no longer available and I can't find a new one of his.
Ulf Ronald Andersson's website (the author of BETAdos) is still working though: http://www.ettnet.se/~dlanor/index_nc.htm

OK, that aside I took a new look at BETAdos, understanding that it's basically a full replacement of METAdos, so it should be improved and work better, possibly removing my problem of the computer freezing when no CD media is found in the CD-ROM drive.
So, based on the help I've received here and a little trial and error I came up with a working configuration meaning I now have a CD-ROM system which works just like before, but with BETAdos instead of METAdos. Here's my configuration file (BDCONFIG.SYS) with the original comments removed:

```
; ### BDCONFIG.SYS file for MetaDOS 3.12 ###
; ##########################################
;
; ### CD-ROM on ACSI 3 as XBIOS drive X ###
*BOS, c:\auto\spin_sd.bos, X:3
;
```

```
; ### install as logical drive X ###
; ### Original Atari (METAdos) ISO-9660 support file disabled ###
; ### and replaced by BETAdos' own ISO-9660 support file ###
;
; *DOS, c:\auto\iso9660f.dos, X:X
*DOS, c:\auto\bd_9660f.dos, X:X
;
;
*DOS, c:\auto\cluster.dos, U:0
*DOS, c:\auto\cook_fs.dos, U:1
;
*SLB, c:\auto\slb_load.ovl c:\gemsys\magic\xtension
;
; ### END OF FILE ###
; #####################
```

But getting back to the problem I've been trying to solve; that the computer freezes when no media is found in the CD-ROM drive...
Upon booting, one of the message that comes on the screen up is this one:

```
      SCSI-treiber V5.00
  (c) C. Brod, S. Engel 1994-1996
       compiled 03.12.1996 22:28
Initializing SCSI driver....
searching driver modules..
IDEot, ACSI, ALIA, TT, Falcon, MM,
scanning busses...
ACSI... 00 03
scanning done
Installing ACSI-buffer
 ACSI 3.0: YAMAHA  CRW4416S   1.0G (XHDI)
SPIN! /SD 0.34
 installed BOS drive X: using ACSI 3.0 .
BetaDos ISO9660F v1.00
 installed DOS drive X: .
Cluster driver v3.07
 installed DOS drive U: .
Cookie jar filesystem v1.01
 installed DOS drive U: .
```

However, if I boot up with the CD-ROM drive powered up, but no CD disc inserted I only see the following whereby the computer freezes indefinitely:

```
      SCSI-treiber V5.00
  (c) C. Brod, S. Engel 1994-1996
       compiled 03.12.1996 22:28
```

```
Initializing SCSI driver....
searching driver modules..
IDEot, ACSI, ALIA, TT, Falcon, MM,
scanning busses...
ACSI... 00
```

So what I'm wondering about now is: what file exactly is the above referring to? And is there anything in BDCONFIG.SYS which could relate to this problem?

Hallvard

May be, but in case of doubt that's for us just *SEP*... isn't it?

It's great to see a free CD-writer tool for our platform. Apart from Anodyne's commercial solution, is there anything else like this?

Unfortunately CDLab seems far from completed. I've spend the better part of an afternoon trying to write a CD without any luck. I'd like to hear from anyone who's gotten it to work.

Even the documentation file isn't complete! But with the aid of ST-guide's own HCP.TTP I was able to compile the .STG file into fully usable .HYP and .REF files which ST-guide could use. Has the author of CDLab forgotten to do this?

Still, I wish the author all the best and I for one am very anxious to get myself a free CD-writer application!

What do you want to burn ?
What is your burner ?

I want to burn a normal data CD with text files, images, programs etc.
My burner is a Yamaha CRW-4416s connected to my MegaSTe via a Link 97.
I'm already able to read CDs (ISO-9660) on the MegaSTe with the same
drive.

Data mode burning under CDLAB only supports MMC compliant drives.
The 4416 is too old and doesn't support MMC commands although it's really close.

I figure that 4416 is supported with my Cdrtools port but it's slightly complicated.

But I am sure that the old Cdrecorder program from Soundpool manages this burner drive and it's very easy to use. It was a commercial program but the existing cracked versions work very well.

Good luck.

Yvan

Try 16/32 Systems (www.1632systems.co.uk) as they have now taken over a lot of stuff from Atari Workshop or try Atari Workshop direct (www.atari-workshop.co.uk)

It probably is ours. I asked only because I didn't want too many
different versions out in the wild ;-)

It would have DDP Translations as a credit in the About... menu item.

I just read the docs... Incompatible with 'exotic' file systems such
as 'ext2', is imho a rather big limitation.
Have you confirmed this? Do you know if it's related to the library
you're using or if it's some other issue?
I know problems may arise when using the legacy file system calls, but
doesn't magic support the enhanced file system functions introduced by
mint?

Anyway, thanks for your efforts, Pierre! I'm sure these minor issues
can be sorted out. I think your stuff deserves to be used in freemint
too..

regards

Yes, and once you've down the "Shutdown" procedure in MagiC etc. you
can physically turn off the power with the power switch.

It's funny this subject should come up now because I dusted off my
Mega STe a couple of days ago and having finished working with it I
stopped up for a second wondering if there was a "shutdown" menu to
select or not :-)

I've been in touch with him in the past as well, and last I heard from him was in January when he told me that the STidem boards were under manufacture in China. After that, nothing.
At least, since you heard from him in May he's still working on stuff, which is good.
Perhaps he's just very busy.

Apparently the "comp.sys.atari.st.tech" no longer serves its purpose of being the technical discussion side of the Atari ST, but this newsgroup seems to be THE Atari ST group....

I'd like to add Ethernet to my Mega STe (which will be recased, so its physical location/size etc. doesn't matter).

The current solutions using the cartridge port won't work for me since my cartridge port is already full of MIDI expansion devices daisy-chained together. The NetUSBee for example (http://hardware.atari.org/netusbee/netus.htm) doesn't have a "pass thru" port, and I'm worried about data loss or poor performance by joining so many cartridge based devices together.

Then there's the ACSI port (or SCSI through a Link 97) by using a Daynaport SCSI Link (http://www.anodynesoftware.com/ethernet/main.htm). I'll be having a Link 97 connected to the ACSI port on the back of my Mega STe, so at first glance this should work fine, but I don't know if the Daynaport devices have SCSI "thru" connectors allowing for multiple SCSI devices to be connected together in a chain (I'll most likely have a SCSI CD-ROM burner connected to the Link 97 inside the new recased computer, and a new SCSI connector on the back of the computer's case for other devices such as an external SCSI hard drive or ZIP drive etc.).
I also don't know how well this works as the Anodyne link above explained that you needed to deactivate the ethernet driver in order to use the floppy drive.
I was hoping for something more "plug and play" and always available, but is this a common issue when it comes to networking an Atari ST?

The final solution is one that I've never heard about but at least in my mind sounds like a great one: using the built-in hard drive interface of the Mega STe!
I've read (http://atari-ste.anvil-soft.com/html/devdocu6.htm) that the internal hard drive of the Mega STe actually runs off an ACSI port, which seems to imply that the interface board (where the internal SCSI drive plugs into) is more or less similar to an ICD Link or something.

Having heard about the EthernNE adapter which allows for a standard NE2000 compatible ISA networking card to be used with the Atari ST, which is then to be connected to either the cartridge port (being the EtherNEC version, which isn't of interest for me as explained above), but also as an EtherNEA version which uses the ACSI port, that sounded interesting to me.

I assume the adapter is meant to be connected to the ACSI port on the back of any Atari ST, but if the internal hard drive accesses a second ACSI bus, then I don't see why I couldn't connect it there instead. After all, I won't be using the internal hard drive any longer, which would leave the bus completely alone for the sole purpose of networking! Wouldn't this be a whole lot better than sharing the cartridge or external ACSI ports with other devices in addition to networking?

Unfortunately I haven't had any success in getting in touch with the developers of these adapters (Elmar Hilgart and Thomas Redelberger), and there's not enough information available online to etch your own

PCBs.

Here are the sites I've found:

http://home.arcor.de/thomas.redelberger/prj/atari/etherne/index.htm
(EtherNEA/EtherNEC adapters)
http://www.asamnet.de/~hilgarte/ (EtherNEA and Ethernet adapter II)

I'd like to hear from people who know more about the subject and could possibly help me get hold of these devices, or information about building one myself.

Does anyone know how to get in touch with Elmar Hilgart and/or Thomas Redelberger?

I'm interested in adding ethernet for my Mega STe, possibly using the EtherNEA adapter (or the Ethernet adapter II) which have designed by the above two gentlemen, but having used the email addresses shown on their websites repeatedly I still haven't received any replies.
I therefore assume that the websites have been abandoned and those email addresses are no longer used.

Here are the websites:

http://home.arcor.de/thomas.redelberger/prj/atari/etherne/index.htm
http://www.asamnet.de/~hilgarte/

I know I'm gonna get flamed for saying this, but what the heck. Those devices should be considered obsolete.

You should take a look at NetUSBee (Ethernec replacement), or, if you really need your cartridge port for something else then maybe there's a way you can hook up the Daynaport SCSI adapter to the MegaSTe's SCSI bus.

Failing that, maybe someone who is upgrading to a NetUSBee may have an EtherNEA they are willing to part with.

Hehe :-)
Things happen quickly on the Internet ;-)

Yes, if someone has an EtherNEA I'd be interested.
Even more interesting is the "Ethernet adapter II" (http://www.asamnet.de/~hilgarte/) which seems to be a single card which is the whole ethernet interface and connects to the ACSI port! The page says "available shortly" while the website was last updated about a year ago.
Now, if I could only get in touch with the author (Elmar Hilgart) and find out if this board is actually available, and figure out if the internal ACSI bus of the MegaSTe will work with this sort of thing...

Speaking of the internal vs. the external ACSI bus; does anyone know if these are independant buses of each other? I'm thinking that if they are then the computer might be able to go online without sacrificing the data-flow of the external ACSI port which I'll be using for the CD-ROM and possibly an external hard drive, and I'm hoping the problems with the floppy drive not being accessible (see the section near the bottom of this page entitled "restrictions": http://www.anodynesoftware.com/ethernet/main.htm) will no longer be an issue.

The idea is that I can, with the help of ethernet, be able to transfer files to/from my Mac desktop instead of messing around with floppy disks, or burning a CD-R/CD-RW.

It would also be nice to surf the web, but I really don't need that as my Mac's much better for that sort of thing anyway.

I haven't had much experience in networking the ST, but I do seem to remember other solutions where the printer or modem port was being used.

Unfortunately there's no parallell not serial port on my Mac. There's a modem, but it's built-in. As for the rest of the ports (Firewire, USB) there's nothing like that on the ST.

So the only solution for networking as far as I can see must be via an ethernet interface.

Bonsoir :)

PeP a �crit :
> I just read the docs... Incompatible with 'exotic' file systems such
> as 'ext2', is imho a rather big limitation.

Not mine. have you not a GEMDOS partition on your system ?

> Have you confirmed this? Do you know if it's related to the library
> you're using or if it's some other issue?

I said that because I have not tested the behavior with an ext2 partition. I don't want to install mint and reformat my hard disk only juts to test it.
I was worried by the possible use of unix "/" instead of dos "\".

> I know problems may arise when using the legacy file system calls, but
> doesn't magic support the enhanced file system functions introduced by
> mint?

I use always gemdos functions. File listing are made with the Dopen()&co funtions introduced by Mint.

> Anyway, thanks for your efforts, Pierre! I'm sure these minor issues
> can be sorted out. I think your stuff deserves to be used in freemint
> too..

Sorry, i'm not a Mint die-hard user. Someone told me it was running under Mint-NP, but I do not know if on gemdos or ext2 or else partition.

Au revoir.

Hey :)

> > I just read the docs... Incompatible with 'exotic' file systems such
> > as 'ext2', is imho a rather big limitation.
> Not mine. have you not a GEMDOS partition on your system ?

Yes I do, but I'm also using 4 ext2-partitions :)

> I said that because I have not tested the behavior with an ext2
> partition. I don't want to install mint and reformat my hard disk only
> juts to test it.
> I was worried by the possible use of unix "/" instead of dos "\".

Fair enough. Hopefully it works, and if it doesn't, it won't be difficult to fix. Unix paths can also be referenced as normal through U: anyway. As soon as I have GBE running properly I'll have a look.

> I use always gemdos functions. File listing are made with the Dopen()&co
> funtions introduced by Mint.

Good, should work then.

> Sorry, i'm not a Mint die-hard user. Someone told me it was running under
> Mint-NP, but I do not know if on gemdos or ext2 or else partition.

Ah :) No worries - you do the right thing and release the source code - which is great because then stuff like this can probably be solved anyway. I think that's great.

have a good one

No they are 1 bus. The card inside the MSTE is infact a poor
implementation of an ACSI<=>SCSI adapter. ACSI is remarkably like
SCSI. It was in fact Atari's attempt to get their own SCSI-like
standard in place before any other competing standard took majority
hold, but both ACSI and SCSI lost out when IDE took over the desktop
market shortly after, but not until SCSI had implanted itself firmly
as the no1 for server systems storage.
```

The restriction is largely irrelevant if you have a good network connection and broadband internet access, plus you have another desktop system. That's more or less my setup. I hardly *ever* need the floppy disk drive.

> It would also be nice to surf the web, but I really don't need that as

The Modem is a USB modem, sitting on an internal USB bus.

> As for the rest of the ports (Firewire,
> USB) there's nothing like that on the ST.

Again, if you can get a NetUSBee you can have Sting/MintNet networking immediately, and USB drivers will start to appear soon. Firewire on the ST range is largely pointless, as is USB 2.0 High Speed.

> So the only solution for networking as far as I can see must be via an
> ethernet interface.

If you really cant get rid of the stuff in the cartridge port and get a NetUSBee, you're gonna be relying on hack-ups with the ACSI bus. Not nice.

Just for interest - what you got in the cartridge port thats so important?

> I was hoping for something more "plug and play" and always available, but is this a common issue when it comes to networking an Atari ST?

The DaynaPorts are the nearest thing to "plug and play" I have seen. They have passthrough ports and switchable terminators. You do need HDDRIVER though....

> The final solution is one that I've never heard about but at least in my mind sounds like a great one: using the built-in hard drive interface of the Mega STe!
> I've read (http://atari-ste.anvil-soft.com/html/devdocu6.htm) that the internal hard drive of the Mega STe actually runs off an ACSI port, which seems to imply that the interface board (where the internal SCSI drive plugs into) is more or less similar to an ICD Link or something.
>
> Having heard about the EthernNE adapter which allows for a standard NE2000 compatible ISA networking card to be used with the Atari ST, which is then to be connected to either the cartridge port (being the EtherNEC version, which isn't of interest for me as explained above), but also as an EtherNEA version which uses the ACSI port, that sounded interesting to me.
>
> I assume the adapter is meant to be connected to the ACSI port on the back of any Atari ST, but if the internal hard drive accesses a second ACSI bus, then I don't see why I couldn't connect it there instead.

I already have HDdriver (can't remember which version, but I haven't
updated it for years).
Yes, the Daynaport solution is probably the simplest way to go (and I
assume those outdated ethernet adapters for the Mac platform are dirt
cheap these days), but I'm a little concerned about the limitations
```

mentioned at the Anodyne site about the floppy drive being inaccessible while being online.
Since using an ethernet connection gives that side-effect, does it mean that I possibly can't use an SCSI device (connected through the Daynaport) before I access the STiNG settings and turn off ethernet?

I'm trying to set up a *simple* and efficient system. Not the kind of computer where you have to remember to change a certain setting before doing task A, but if doing task B turn it on, while remembering to disable C and D, but not E... if you catch my drift.

I would guess that a dedicated ethernet card for the VME port would be the best solution, but those cards are near impossible to find these days (and very expensive when they do pop up).

Hallvard

Was surprised to see a USB/parallel cable at Wal-Mart yesterday for $20.
Probably could be had for less on the internet. Under the impression the
ST's parallel port wasn't bi-directional though. USB/serial cables exist
too. Should be even cheaper. Slow but the easiest to implement. Probably
need a null modem cable or adapter too.

Had a Falcon connected to a PeeCee a long time ago via serial and it wasn't
too bad once I had Zmodem working on the PeeCee. Seem to recall leaving the
Falcon and MegaST4 on all night occasionally to transfer files via MIDI(33K
IIRC). Still better than sneaker net even if they are side by side. May be
possible to mod the ST serial port to run at MIDI speed. Never tried it.

Like I said before, I don't think the temporary loss of FD drive is
gonna cripple your workflow.

> I would guess that a dedicated ethernet card for the VME port would be
> the best solution, but those cards are near impossible to find these
> days (and very expensive when they do pop up).

I have a PAM's VME ethernet card, which works great in MiNT on my TT,
I seem to remember getting it working also in Sting, but I'm not 100%
sure. Because I have NetUSBee now which frees up my VME slot for my
GFX card, I don't need the PAM's card. Maybe I could sell it if you
are interested.

I wanted to buy one of the serial ones for my Mac so I could use older
non-usb devices but alas, the cheap one I saw when I checked the mfr
website, there was no Mac compatibility info.

> Had a Falcon connected to a PeeCee a long time ago via serial and it wasn't

The earlier MegaSTe's serial port runs quite well only at 57600 bps
(still faster than the midi port), and the later MegaSTe (which had a
better SCC) and the all TT's (AFAIK) can run reliably at 230400 bps.

Maybe, but I hate to have to remember to switch on/off things in
control panels or what have you. After a while if you don't use the
computer for a while you tend to forget these things and wonder what
the heck is the reason for this and that not working.

Yes, I'd be interested in hearing more about this card. I've never heard of the PAM card before and searching the web didn't give any useful results.
Does it have an RJ45 connector, and would this solution give a better result and with less complications than the ones where the ACSI interface is used?

I don't run MiNT, only TOS 2.06 and MagiC. Since the computer will become a dedicated MIDI computer I will run it mostly in TOS, so the ethernet card would have to work within TOS.

Once installed in my MegaSTe and with the correct drivers, how would I transfer files from the Atari to my Mac? Will the Mac appear on the TOS desktop as a drive and it's just a matter of drag & drop, or is it a bit more complicated than that?

Oh, too bad :-(
So I would probably have to turn off STiNG (and temporarily lose
network access) every time I needed to use the floppy drive, just like
when connecting a Daynaport ethernet adaptor to a Link 97/Link II
etc.?

> > As for the rest of the ports (Firewire,

I was just pointing out that none of the ports on the Mac are
compatible with the MegaSTe, so I really do need an ethernet port in
order to communicate between the two.
That is, if the communication between the two are worthwhile. If it
takes 30 minutes to transfer a few files from the MegaSTe to the Mac
I'd probably be better off just getting Anodyne's CD-burner software
and burn data to a CD-RW.
My whole point of looking into networking on the MegaSTe is for
transferring (and occasionally backing up) files on to the Mac, where
I have proper access to the net if I need to share any Atari files
with others, and better/faster CD (or DVD) burning options for backup.

What do you mean? Apart from the need to switch on/off STiNG depending
on whether you want network access or floppy drive access, are there
other negative side effects of using the ACSI port for networking?

> Just for interest - what you got in the cartridge port thats so

> important?

A bunch of MIDI related hardware. The recased MegaSTe will end up
being a specialized and dedicated MIDI computer, so removing any of
those devices is out of the question.

Yeah, I understand this. The grey matter is not too good for retaining
this sort of info over time. Now Post-it notes, theres another

story :-)

> Yes, I'd be interested in hearing more about this card. I've never

The PAM's VME card is almost the same card as the Reibl VME card. It uses the same chipset (Lance), but there was enough of a difference that it needed it's own driver. Both of these cards only have a BNC or AUI port, which requires the use of a dongle (which I have) to convert to RJ45.

> I don't run MiNT, only TOS 2.06 and MagiC. Since the computer will

I can't give advice on Magic, as I don't use it (only tried it for a while, and never with networking), and in TOS, you would be using Sting, and from memory I think it was working fine, but I'm not sure. If I have time to play with it I can check it out, but I'm currently trying to get the USB mouse driver ready.

> Once installed in my MegaSTe and with the correct drivers, how would I

As usual its a bit more complex, but the way I do it is to have an automator script saved on my desktop where I just drag the file(s) to the script's icon, and then it automatically connects to the Falcon (via FTP) and drops the file(s) into a pre-designated directory there. Of course for this you need an FTP server on the Atari (included in MiNT, and I know there is at least one that works with Sting). If you want to do it the other way around, you will need to enable your FTP server on the Mac (in sharing preference panel) and get some FTP client on the Atari. Again, with Magic, I cannot advise, but someone else here will be able to fill in the holes.

Probably. Unless someone (Roger?) finds a way around this in the
driver.

Right. There is no other easy way around this.

I mean because the SCSI card is internal, so if you're considering
adding a SCSI/Link you are gonna need some adapters inside the STe, a
double cable to connect the adapter and your existing hard disk, and
some sort of termination power (which is probably already provided by
your other gear). In my books, this is a hack-up. I love this stuff,
though it's not good if your machine is a 'production' machine (which
it sounds like it is).

Can you be a bit more specific? The reason I ask is that most
cartridge port stuff I see for musicians these days is extra midi-in/
outs, or dongles. When I have some time I'm going to look into the
possibility of making a driver for a cheap USB midi port device that
will interface with CAF.

Hello,

I believe you can still download Ghostscript. It is still one some Atari ftp sites. Other programs that work as well are Zview and Porthos.

Take a look at <http://www.myatari.net/issues/feb2002/samba.htm>. I haven't read the whole thing, so I'm writing this from the perspective of connecting from the Mac to the MSTe.

Assuming! that that suits your purpose then, in the Mac Finder, go to Go/Connect To Server... and enter "smb://<your MegaSTe's dotted quad address>". You may also need to go to Network Prefs and turn Windows Sharing on.

You can go to Network Utility and give your STe's IP address a name if you want. I can go to my TiVo's web server (at 192.168.1.9) by simply entering "http://tivo" in the address bar. You'll need to look up the specifics on how to do this.

You could also set up an ftp client as Coda suggests, but this is much better if you can get it running (better integration), BUT you will get .ds_store and .trash files piling up on the Atari.

To transfer files between the PC and my TT I used the WFTP server on the Atari and a GUI based FTP client on the PC. This did allow drag and drop on the PC but not on the normal desktop.

Bonjour :)

Monsieur JF.LEMAIRE has reported me deux bugs. Many Thanks to him.

- division by zero an exit. This happens when file is small and CPU + Net is very quick, upload or download is lesser than 200ms.
If this happens, please deselect the stats 'flow for each file' (the first one, select by default in the stats).

- can't delete a remote folder, evenif empty.

These bugs are fixed now on my computer, but i do not want to bother users with a release every week, so please wait next month, and apply work-arounds.

Apologizes for the inconvenience.

It seems that solution is mainly for MagiC. While I do have MagiC (I
think it's version 4) I will use the MegaSTe mostly in plain TOS (with
the "Thing" desktop) as my MIDI software doesn't work with MagiC.
And although I have a boot-selector (Superboot) where MagiC is one of
the choices, it'll be a hassle to reboot just in order to transfer a
file or two over to/from the Mac.

Yes, this sound exactly like what I've done when networking a PC to my
Mac. Once set up correctly it works like a charm.

> You could also set up an ftp client as Coda suggests, but this is much
> better if you can get it running (better integration),
```

I guess under TOS you're bound to run into limitations because of the lacking multitasking. Even though I would prefer a streamlined solution where I could just drag and drop the files on to the Mac I can handle starting a program on the MegaSTe for the purpose of transferring files (e.g. FTP), get the files transferred, exit the application, then get back to what I was doing.
Come to think of it, the ACCessories are a basic form of multitasking.
Would it be possible to do the file-transferring via an ACCessory or a CPX module?
That way I could possibly do without exiting my MIDI sequencer (Notator SL) just to enter the TOS desktop (or "Thing" if I can sacrifice the memory) to do the file-transfers.

> BUT you will get
> .ds_store and .trash files piling up on the Atari.

There are several (free) solutions to this problem.
Since I've transferred files to/from my mobile phone and camera memory cards I needed to look into it.
Check out the following MacOS X software:

Finder Cleaner (http://www.findercleaner.tk/)
DeStore (http://www.soja.org/destore)
TinkerTool (http://www.bresink.com/osx/TinkerTool.html)

With TinkerTool you can change "hidden" features in MacOS X.
For the above issue, just go to the "Finder" section where you'll see an option for turning off the ".DS_Store" feature over networks.

The above will be no problem as it'll all be placed inside a 19" rack
enclosure.
I will be connecting a Link '97 to the ACSI port and TERMPWR on its
appropriate pin for that, from the computer. The TERMPWR pin on the
other side (the end that goes to SCSI device(s)) will have its TERMPWR
pin separated so there's no chance of problems if say an external hard
drive has power applied to that pin.
An SCSI "through" connector is pretty standard, so I wouldn't call
that hacking.
Everything would be neatly placed inside the 19" rack enclosure with
external connectors being made on the rear panel.
Shouldn't be any problem at all.

CAF=Cubase Audio Falcon?
Specifically I'll be using Notator SL in conjunction with dedicated MIDI hardware connected to the cartridge port. At the end of the chain I will also have a "Discovery" cartridge which has allowed me to back up copy protected floppy disks which are near impossible to get replacements for these days:

MegaSTe -> Combiner -> Log3 -> Unitor2 -> Discovery

I also have a buffer-board which I can insert somewhere along the chain to boost the signal, although I haven't quite decided where yet. I don't think any other hardware can take these C-Lab/Emagic cartridge devices' place as they're very specific to the software.

The Discovery cartridge has a cartridge "thru" port where I could theoretically add say a NetUSBee or one of the other networking solutions which go on the cartridge port, but I don't know how well that would work with that long chain, and especially when a "Combiner" (a cartridge expansion device) is used first in the chain to select which cartridge to use.
Finally there's no "thru" port on the NetUSBee, which is a bummer.

This is why I'm still interested in hearing more about your VME networking card.

I wish you all the best with the USB MIDI port. It's great to hear that people are still designing hardware for this platform.
Any chances of creating a USB board which will allow for USB printers, now that Centronics interfaced printers are becoming a rarity and most people these days have a second computer (PC or Mac) with a USB printer attached.

> You just have to follow my build script up to the comment "Now,
> compile and install the MiNTlib"

Just a word about what I call "follow the build script".
I qualified the build scripts as "semi-automatic" because they are not
intended to be run directly. They sometimes need some manual
interventions. And they don't support error checking.

I simply open a console (rxvt under Cygwin) and I copy/paste every line
(or group of lines) then I wait for the result. It is quick and easy.
But sure, a Makefile would be better.

I have just uploaded a new patch for the MiNTLib. My initial one,
combined with the settings of GCC 4.2, resulted in a bad return value of
memcpy. Now it seems to be quite correct, I've been able to
cross-compile native binutils for MiNT.

Good luck.

Vincent

Yeah, it's called NetUSBee :P

Drivers are being written.

It's unfortunate, if you can't get the one prog you want to use to actually run under MagiC.

> solution where I could just drag and drop the files on to the Mac

I don't know of any TOS solutions to D&D, but setting your Mac up as an FTP server is easy enough. As for file transfer via ACCs or CPXs, hmmm.

>> BUT you will get

I bought BlueHarvest, which does the same job - not too keen on fiddling with hidden settings with such as TinkerTool because it's too easy to lose track of what's been changed IYSWIM.

There is also the commercial Porthos, available via Ulf Dunkel of
Calamus fame, which works well, though very slowly (as does
GhostScript) - not really surprising with a slow processor.

Regards, /Peter/

No. Notator SL doesn't work with any other OS than TOS.
Nothing to do about that as the program is no longer supported.

Fortunately I can run a better desktop on top of TOS, such as "Thing"
which greatly improves the experience, even though it steals a little
memory which I would otherwise like to use for Notator. Oh well.
And if you really investigate TOS 2.06 there's a whole lot of cool
things you can do. I wrote a TOS 2.06 guide several years ago. It's
still available:
ftp://gem.win.co.nz/hall/tos_206/guide206.zip

> I don't know of any TOS solutions to D&D, but setting your Mac up as an

Well, if I can't do drag&drop from the Atari desktop I'm at least hoping for a standard Atari GUI application in order to transfer files back and forth. Please don't tell me I have to resort to a UNIX like command line. I used to think that sort of geeky thing was cool, but am way past that. It's all about user-friendliness and getting things done these days.

TinkerTool has a "revert to default settings" so no problem.

As with the other software I suggested; they don't mess around with the system and work in more or less the same way as BlueHarvest, but as far as I know, BlueHarvest is more automated and extensive, so you can forget about it and let it do its thing in the background.

Reminds me. I never got the Falcon and PC connected at the fastest
speeds(this was ~10 years ago). Probably about what the MegaSTe runs. Forgot
the MegaSTe had a faster serial port.

A program that uses Zmodem is needed on both computers. Using Ymodem or anything older just isn't practical. I used STalker on the Falcon & MegaST4.

I've got an "old" (bought in 1999) iMac. The only external connections it has on it are a 100mb Ethernet port, two USB ports on the main computer unit, a two port USB hub on the keyboard, and a phone connector for the modem. No serial (other than USB), no parallel, nothing a stock Atari would come close to recognizing.

http://www.macwise.com/Keyspan.html

It's made to connect to the Mac's USB and a serial(not USB) cable. The cable needs to be a null modem cable or adapter because both computers are expecting a modem. The null modem swaps TX & RX.

A printer/parallel port can be added that way too. USB can convert to a lot of other standards. Don't even know if the serial and parallel ports work on the PC I built in 2001.

It's been a while since I've used my ST, so I've forgotten all the small details...

So as to have different options I installed the "SuperBoot" boot-selector where one of the settings is MagiC/Thing. I can't remember which version of MagiC I have, but from memory I think it might be version 4.

Anyway, what happens is that when it comes to booting into MagiC and the "Magxboot" application runs, the floppy drive spins for a while (I suppose it tries to boot from the floppy is there's one inserted), then shortly after I get the following error message which locks everything up:

```
  Bildschirm-treiber nicht gefunden.
  MCMD wird gestartet...
  System wird angehalten.
```

I first assumed this had something to do with NVDI not being assigned properly, but then I disabled NVDI when rebooting, but still got the same error message.

After a quick search of Google[0], there's the possibility that
something may have corrupted the magx.inf file.

[0] which can't find the phrase "MCMD wird gestartet" but can find MCMD
"wird gestartet".

```

```

I suspected something like that, which is why I tried creating a new
MAGX.INF file by using MagiCconf (the folder is actually called
"MCONFPRV", not to be confused with MAGXCONF which only works with
MagiC 5 or higher).
Still no luck in getting it to work.

I do however have MagiC working from another (external) SCSI hard
drive. I'll see what I can use from it and get the one on the internal
hard drive to work as well.
In the meantime, if anyone has any good suggestions or ideas I'm all
for that :-)

Hallvard

I am working on checking out all the files that I have loaded onto my
Falcon that were given to me by the MagicNET author. I assume that you
are running high-speed internet of some sort??? I will try and gather
up all of the MagicNET and patches for all of the gateways (Draconis,
Iconnect and such...) I will leave them untouched from my settings so
that we can work together on finding what information will need to be
changed on your end.

I will be in touch by e-mail shortly....

I remember this message ... when I met it, I had made some error in the
boot selector. Try disabling XBoot, after manually renaming the required
"PRX"s in the AUTO folder and see if the error still occurs.

Are you sure that the message isn't in fact: �Offscreen-Treiber nicht gefunden. MCMD wird gestartet...�? That'd simply mean that MagiC! can't find his drivers in the GEMSYS folder...

Tuesday, July 10th 2007,

CDLab 0.92 is available.
http://doyeuxyvan.free.fr/cdlab/v0.92/CDLAB092.ZIP
A CD-R burning tool for Atari-compatible computers.

New features since 0.91 version

- Better AIFF implementation.

- New audio formats for audio extraction. (AU/SND, AIFF, AIFF Cubase Audio).
- Filenames mask for audio extraction.
- Interface improvement in Monochrome.

Main features

- Audio track extraction.
- CD-RW blanking function.
- DAO (Disc-At-Once) copy for any single-session discs. (But it doesn't work with my MMC compliant drive)
- Data CD Mode. (TAO (Track-At-Once) multisession mode.)

You need the SCSIDRV interface. (already included in HDDriver)
You can also run this program before CDLab.
http://doyeuxyvan.free.fr/scsidrv/SCSIDRV.PRG

CDLab is now released under terms of the GNU General Public License.
The source code can be retrieved here:
http://doyeuxyvan.free.fr/cdlab/v0.92/

Original Francois GALEA website:

I'm using a standard 56K Modem and a pay as you go service.

Just to give you some background.  I have two Falcons (there is a
third somewhere) which I wanted networked and to get a broadband
connection.  Both are running Magic 6.20 & NVDI 5.03.

Falcon one is in a tower case with CT60 running at 100MHz.
Falcon two is in a C-Lab Mk X case with CT63 running at 90Mhz.
I have two EtherNat's and two CTPCI's on order.

>I will be in touch by e-mail shortly....

I'll look forward to hearing from you.

I have a later model 1040STFM and a dying MegaFile 60. I guess the old RLL mechanism is nearing its end.

What I'd like to do is remove the guts of the MegaFile, and insert a SCSI host adapter and more modern SCSI drive mechanism (I have a few working 4GB drives) into the MegaFile case. Before I begin this endeavor, I need to locate a SCSI adapter. I've seen a few ICD models, as well as the one from an Atari SH204 available.

Are there any real functional differences between these that would make one preferable to another?

Second, my 1040STFM currently has TOS 1.0 ROMs installed. Although it is a STFM and not an STE, it uses a 2-chip ROM set, and not the 6 chip set like earlier STs. Does this mean I can install TOS 2.06, or am I limited to version 1.4 unless I do motherboard mods?

Thanks.

Jason Harmon

Yes you are limited to TOS 1.4 unless you do the mod, because TOS 1.6+ resides at a different physical address.

OK - this probably seems a bit of a strange request - but
I'm looking for any spare Atari ST boxes (ie the outer
card box and inner polystyrene pieces).

If anyone has any spare - let me know. Probably just
UK.

Thanks.

jao

Xbox 360 to Get 65nm "Falcon" Makeover This Fall
Brandon Hill (Blog) - July 9, 2007 2:17 PM

"Yippee-ki-yay, Mr. Falcon." Microsoft prepares 65nm chips for Xbox 360

When it comes to Microsoft's Xbox 360, Dean Takahashi always seems to have the inside scoop.

Today, Takahashi confirmed that Microsoft's upcoming 65nm die shrink for the Xbox 360's microprocessor and GPU will is codenamed "Falcon." Takahashi reports that Microsoft is currently qualifying the new Falcon chips along with a redesigned motherboard. The 65nm-equipped Xbox 360s are due to hit store shelves this fall.

The new chips are not only smaller and roughly 50 percent cheaper to produce than their 90nm counterpart, but they are also cooler. Cooler-running chips coupled with a revised cooling solution would go a long way to eradicating the Xbox 360's fatal flaw: the Red Ring of Death (RROD).

Heat has been a big problem with the Xbox 360 and has been the root cause of RROD cases around the globe. Microsoft has countered the RROD failures by increasing the warranty of the console, adding various "warranty enhancements" and beefed up cooling solutions on new production Xbox 360 units.

Microsoft ultimately caved in to mounting pressure from the Xbox 360 community on RROD failures and announced a $1 billion initiative to service Xbox 360s afflicted with the problem and extended warranty coverage for those machines to three years.

Microsoft's next move? Code-name Falcon

By Dean Takahashi
Monday, July 9th, 2007 at 12:02 am in General.

Here's a trade secret that Microsoft is unlikely to publicly acknowledge.

Sony's cutting the price on the PlayStation 3. How will Microsoft react? We'll find out soon. But a key part of the strategy is going to be a project code-named Falcon.

Falcon is the name for the latest internal electronics in the Xbox 360. It will have an IBM microprocessor and an AMD/ATI graphics chip that are manufactured in a 65-nanometer production process. These are cost-reduced chips that do the same thing as their 90-nanometer predecessors, but they're smaller.

With smaller chips, Microsoft gets a bunch of benefits. They won't generate as much heat. So the risks of overheating - one of the main reasons behind Microsoft's billion-dollar write-off for repairs and extended warranties - are much lower. The chips may also cost half of what it took to make them before because they use less material and fewer manufacturing steps to produce.

Everyone knows that console makers cut the prices and costs on their consoles over time. But you may not be aware that the primary chips - microprocessor, graphics, and the Ana video processing chip - are the bulk of the cost of the machine. Microsoft started making the Xbox 360s in August, 2005, with a 90-nanometer process. It is overdue to switch to the newest technology, 65 nanometers, but that day has finally come. It may be some time - a year, maybe two - before it moves on the a 45-nanometer process.

But it's worth it. I recall that Ken Kutaragi said that by moving along the semiconductor manufacturing cost curve with the PlayStation 2, Sony was able to reduce the size - and therefore cost - of the PlayStation 2's original chips to just 13 percent of the original over the life cycle of the PS 2.

If you cut the costs on the chips, you can cut the overall cost of the system. You get ancillary benefits such as using a smaller motherboard, more air flow inside the console, and the ability to take the big giant power supply in the Xbox 360's power brick and put it inside the console.

Microsoft is in the process of qualifying the new Falcon chips and motherboard this summer. I expect it will launch Xbox 360s with the new Falcon innards this fall. That is why the company has been able to say that it has solved its manufacturing quality problems. Microsoft is likely to spend a little more money on heat sinks to make sure that the overheating problem doesn't resurface with Falcon.

The good thing about the smaller chips is that they will likely be easier to make in mass quantities and they shouldn't fail as often. Quality should automatically go up. That's what folks said about the 90-nanometer generation. But the 65-nanometer production process is a known quantity at this point at places such as IBM for sure and possibly at other suppliers such as Taiwan Semiconductor Manufacturing Co. So rather than fix the problems with the 90-nanometer machine, Microsoft has the easier problem now of getting a 65-nanometer machine to work right. I suspect that is why Robbie Bach, president of the Entertainment & Devices group, said on Thursday on a conference call with analysts that the company has "its hands around it at the engineering level."

But once this machine is in the field, Microsoft will have a few options. It can take the power brick and put it inside the same chassis. It can also make a smaller version of the core, but this involves considerable redesign and retooling resources. And it could also beef up the console and make room for more costly things - as it did with the Elite.

It's anybody's guess as to what Microsoft will do with the Falcon as its base platform going forward. But Sony had better watch out. Microsoft is moving ahead of Sony on the cost-reduction curve. It would be risky for Sony to get into a price war with Microsoft.

Now it's easier to see why Microsoft still expects to be profitable in fiscal 2008 with the Xbox 360 business. In this fiscal year, Microsoft will introduce a major cost reduction with the Falcon platform. It will launch Halo 3. And it has already written off in fiscal 2007 the costs of repairing consoles for the next few years.

Falcon is a fundamental part of the strategy that Microsoft is using to try to beat Sony. Is it going to be good enough to beat Nintendo on costs? Very doubtful. Nintendo can play the cost-reduction game just as Microsoft can. Falcon certainly means that Microsoft can afford to cut the price of the Xbox 360 going forward. Whether it does so depends on how aggressive it wants to be at winning the lead market share in the business. But everyone knows that if you cut your hardware price too much, you lose money. After all, Microsoft lost an estimated $3.7 billion on the original Xbox.

When I asked David Hufford, a Microsoft spokesman, about Falcon on Friday, he said I was telling him something new. When I asked Peter Moore, head of games at Microsoft, about Falcon on Thursday, he said, "We have a bunch of different projects that cost reduce and improve quality as you find issues, as does our competition. Once you get millions in the field, you learn about the box under all kinds of different circumstances, you can adjust and tweak what you do accordingly."

Microsoft develops new Xbox 360 chipset

Mark Androvich 18:51 (BST) 09/07/2007

Reduces overheating risk, cuts costs

Microsoft has developed a smaller chipset for the Xbox 360, allowing the manufacturer to cut production costs.

Dean Takahasi, writing in the San Jose Mercury News, reports that Microsoft's new chipset is code-named "Falcon."

The new chipset has an IBM microprocessor and an AMD/ATI graphics chip that are both manufactured in a 65-nanometer production process. The original chipset was manufactured in a 90-nanometer process.

The smaller chipset both reduces the risk of overheating and lowers the production costs associated with the Xbox 360.

Microsoft has not yet officially announced an Xbox 360 price reduction, although the move is expected by many analysts, including Michael Pachter.

The "Falcon" chipset redesign would certainly be a step towards a price reduction. The Xbox 360 has now been on the market for nearly 20 months without a drop in price.

July 9, 2007

Report: Microsoft Looks To Cheaper Chips To Lower Xbox 360 Costs

Report: Microsoft Looks To Cheaper Chips To Lower Xbox 360 Costs San Jose Mercury News journalist Dean Takahashi has reported that

Microsoft could be looking to a new internally redesigned Xbox 360, codenamed 'Falcon,' as a means to not only reduce production costs, but also reduce the console's price at the retail level as well.

According to the report, Microsoft plans to replace its current 90-nanometer chip manufacturing process with a less costly 65-nanometer process, resulting in smaller, more efficient microprocessors and graphics chips for the Xbox 360.

The result, according to Takahashi, will be internal electronics that generate less heat, and thus result in consoles that are less prone to the infamous 'red ring' general hardware failure error, the driver behind Microsoft's recent warranty extension. The 65-nanometer technology also makes for much more possible room within the Xbox 360 hardware, which the report speculates could be used to house the console's current brick-style power supply in future models.

In addition, as the chips themselves make up the bulk of the console's manufacturing costs, the savings from the shift to the new process could eventually be passed along to the consumer by way of a less expensive Xbox 360.

When questioned about the Falcon project, Microsoft's Peter Moore declined to confirm such an initiative, instead telling Takahashi, "We have a bunch of different projects that cost reduce and improve quality as you find issues, as does our competition. Once you get millions in the field, you learn about the box under all kinds of different circumstances, you can adjust and tweak what you do accordingly."

Code-name Falcon: Xbox 360 Gets 65nm Chips
By: C=E9sar A. Berardini - "Cesar"
Jul. 9th, 2007 9:09 am

E3 Media & Business Summit 2007

Dean Takahashi has the scoop on the updated Xbox 360 system that will finally make use of the microchips built using the a 65-nanometer manufacturing process:

Falcon is the name for the latest internal electronics in the Xbox 360. It will have an IBM microprocessor and an AMD/ATI graphics chip that are manufactured in a 65-nanometer production process. These are cost-reduced chips that do the same thing as their 90-nanometer predecessors, but they're smaller.

With smaller chips, Microsoft gets a bunch of benefits. They won't generate as much heat. So the risks of overheating - one of the main reasons behind Microsoft's billion-dollar write-off for repairs and extended warranties - are much lower. The chips may also cost half of what it took to make them before because they use less material and fewer manufacturing steps to produce.

Microsoft Readies Lower-Cost 360

Microsoft is reportedly readying a revised version of the Xbox 360, codenamed 'Falcon', in a bid to reduce production costs.

According to a Mercury News report, (a reputable source of Xbox news) Microsoft will switch to a 65-nanometer production process, meaning new consoles will feature smaller microprocessors and graphics chips as opposed to the 90-nanometer processors found in current models.

The smaller, more cost-efficient 360 innards will add a range of benefits to the system, while lower production costs would also facilitate any plans for a future price drop.

If these new production methods are implemented, overall console reliability would be increased. The risk of overheating, an issue that has strongly been linked to the three red lights of death failure, would also be reduced, while more space would be freed up inside the console itself. The report speculates that this new space could be used to house the current brick of a power supply that comes with 360s.

Microsoft is reportedly in the process of qualifying the new Falcon chips and motherboard, with 360s containing Falcon innards expected to hit retail this fall.

"We have a bunch of different projects that cost reduce and improve quality as you find issues, as does our competition. Once you get millions in the field, you learn about the box under all kinds of different circumstances, you can adjust and tweak what you do accordingly," said Peter Moore, head of games at Microsoft, when questioned about Falcon.

Goodness knows what MCMD is, or whether it's only started if MagiC's
offscreen drivers can't be found!

Anyway, it's symptomatic of a faulty installation of MagiC which might
be repaired by copying any missing files (these are *.ofd files IIRC?)

Bonjour

SixteenThirtytwo a �crit :

>   Bildschirm-treiber nicht gefunden.

When you install MagiC, you have to specify a partition where MAGIC.RAM will find its X:\GEMSYS\ folder, where X is C, D, or else.

MagiC video drivers and GEMDESK\MCMD.TOS are located in this MAGIC.RAM.

If you change the location, then you must reinstall. MAGIC.RAM is signed with key and informations (included this path for GEMSYS) when installed and cannot be copied as you want.

Other possibility is that your MAGX.INF is not correct, probably saved with a CR or LF line-end instead of CR+LF.

++

I think you're on to something because it somehow worked when I copied
the entire "GEMSYS" folder over from the external hard drive.
Still, not everything is working properly even after having messed
around with the "MAGX.INF" file using "MagiC!Conf" (MCONFRV).

After several years it's all pretty confusing as I can't remember
which files do what, which variables to set, which config files to
edit etc.
As far as I can see I've had a pretty complex setup with a boot-selector, MagiC, Thing and various "helper" applications and
enhancements.
Is there a MagiC FAQ somewhere? I could need some explanation of the
various entries in the MAGX.INF file including the environmental
values.

I remember a very nice MagiC website years ago, but alas it's gone. I
think it was this one: http://www.magical-sides.de/
An outdated website would have been better than completely removing
it :-(

Hi Micka=EBl,

What a curious answer ?

Mickael Pointier wrote :

Well M$ is making his own an ATARI historical success.

If you don't know about the ATARI machines, you don't need to read
this newsgroup about ATARI computers. You don't need furthermore to
post on c.s.a.st newsgroup.

There's ATARI "Falcon" 30, I have a standard version of it that I bought
in 1993. And now Falcon 60 thanks to Rodophe Czuba and the CT60. I
personally have a Hades 60 since 1996. All these are my devel machines.

If you don't believe me, read the following page and follow the link
about my Eureka 2.12 software.

<http://www.kingx.com/kingx/medusa/thes.html>

I'm submitting an information that is seriously linked to the ATARI
world. Read about it !

ATARIstically,

So what? Most people on here still use an Atari machine for one thing or another, and it has NOTHING to do with the M$ 'Falcon' crap.

Yes, I think so. It would be every bit as related to Atari as this
thread is so far :)
This time I'm not even surprised actually. It is more like "Oh here he
goes again".

Regards,

/Joakim

Ok, so you are saying that you are not aware that "Falcon" is a common
english name, which existed before Atari or decided to continue in the line
of "animals" brands like "Lynx" and "Jaguar" ?

If you find an historical article about "Apricot" machines, don't forget
posting a message in the Apple newsgroups, they will be very happy to see a
totaly relevant post.

Man, that's pretty harsh, don't you think? The point he's trying to make
is exactly what my first thought was upon reading your post and the
```

information linked to it... Just because Microsoft decided to name
their chip "Falcon" doesn't mean it has anything to do with Atari beyond
a coincidental same name as the Atari computer. I don't think Mr.
Pointier meant to say he didn't know anything about Atari computers, or
even that he didn't know that the Falcon and other machines exist. He
and I (and others) are just trying to figure out why you think this
information is so important to us. I personally don't care what
Microsoft codenames their products. I don't use them. It really has no
link to the Atari Falcon at all except for the name.

Yep, having access to sources is valuable in such a case. From what I
can tell, Litchi will run happily under FreeMiNTs memory protection if
compiled with a decent GFA library. At least I managed to compile the
program using Run!Lib and I have not noticed any problems with that
binary under memprot so far.

Would there be any problems with ext2fs I can for sure try and have a
look at that here. I'll await next bugfix update of Litchi before
doing any further tests though.

Regards,

/Joakim

Ho well ... We're on an ATARI newsgroup. A new machine called "Falcon"
means something for ATARIans. You can't ignore it !

Furthermore, we're on comp.sys.atari.st meaning that we're supposed
to talk about "ATARI Computers". We're not talking about birds or
about consoles or portable consoles, nor 8-bits. Xbox is strictly
speaking not a console, but a *nextgen machine* ... You may understand
that, or you are fooling me !

For me, a nextgen machine that is called "Falcon" really chock me !

```
I supposed some of you would be interested with that, as I am.

You're kidding !

Did <http://fr.atari.com/> had some responsibility in that dirty trick ?
We will never be able to speak about Falcon without thinking of it :-(

Ho yes, but that is not all there is !
I think that these machines called "Lynx" also must be of great
interest to all ATARIans. Really !

This is vital information that seriously is connected to the ATARI
today !
I'm sorry, but if you deny this fact you should never power up your
ATARI again. If you refuse to believe these facts, read this:

:P

You can put "Falcon" in your killfile because it is an Xbox.
You can put "ATARI" in your killfile because it's a French company
editing games for many consoles and nextgen machines you have cited.
You'll be satisfied with nothing to read/comment in this newsgroup.

You're an American who live like 20 years ago, in your own world ?

I'm not.

You are a joker !

If you are interested in ATARI then I decide you need to read this,
really. I make the rules, OK ! You are aware that this newsgroup is
for ATARI, yes ? Then you are welcome to enter a state of
retrospective with me !

Surely, you must know of the project HATARI, or are you living in a
very small American box ??

URL: http://www.impawards.com/1962/hatari.html

You're welcome !

IRONICally,

/Joakim

Lucky for your, you don't read French. That preserves you from the endless drivel he posts on the French newsgroup. And I'm not exaggerating. It must be seen to be believed. Well, actually, you're much better not seeing it. Just take my word for it :-)

Cheers,
JFL

Hehe, well if it is anything like the endless babbling we see here at
times I am very happy that I don't understand French indeed!

It is funny to see someone who is strictly speaking for himself,
trying to convince everybody else that they are wrong ;)

Regards,

/Joakim

Jean-Fran=E7ois,

How old are you boy ?

I'm not speaking to people born after 1971 ;-)

Who are you speaking about boy ? Speak first for yourself, please.

Is that a personal opinion ? Is that the opinion of Belgian peoples ?

If something shocks you boy in my ideas, then clearly express for
yourself the contradiction ! Otherwise is just the gossipping of a
coward nasty boy. You're kidding ?

What I would say is that it makes much ado about *nothing*.

ATARIstically,

He even 'explained' me that there were no 3D games before Alone In The Dark.
When I told about Elite, Flight Simulator II, Mercenary... He replied
that I was confusing 3D and isometric games.

Funny for a while, but better in killfile :)

Simon

Then you want to hear about "Alone In The Dark" so please look

<http://corporate.infogrames.com/2007/04/alone-in-the-dark-1.php>

the *ATARI Corporate Site* and you'll understand what it really means.

ATARIstically,

When I saw the post from FLC I immediatly rechecked if I'm not reading the wrong newsgroup (fr.comp.sys.atari instead of comp.sys.atari.st). :-)
Saddly I realized that he starts flaming the english atari newsgroup with his game console crap...

But as I'm a curious kind of person I read all replies to his message without actually reading his message :-D. I'm wondering if somebody really did read it...

Philipp

These allegations are pure *xenophobia*

Jean-Fran=E7ois LEMAIRE is Belgian, Philipp Donz=E9 is Swiss. They are
speaking French, and just decided that French ATARIans don't deserve it.

ATARI rules !

Just because there was an Atari Falcon (only seen by common folk like
myself hitting ridiculous prices on eBay, rather than in the flesh,
sadly), use of the word "falcon" need not be worried about like some
territorial issue. Come on, that's really silly.
Other than the sharing of the term, quite a popular name for
marketing, I'd imagine, and let's not forget that it is marketing
departments who choose these names.... this bears no meaningful
connection to the ST family.
If the most important thing about the Falcon was its name, it wouldn't
be important at all.

Please consider these questions:
1. Is the Microsoft project compatible with the Atari Falcon?

2. Does it contain any Atari hardware that's not also common to most machines?

3. Is it related to the Atari community in any way other than a generic word that happens to have been used for one of Atari's computers?

If *any* of these are yes, then I agree that this is important. Otherwise, no, it means nothing for Atarians, and I can indeed ignore it, no matter what you call it.

> Furthermore, we're on comp.sys.atari.st meaning that we're supposed

> that, or you are fooling me !

Yes, we are supposed to be talking about Atari computers here. What does XBox have to do with an Atari? So what if it's a "nextgen machine"? It's not an Atari, no matter what they codename the dumb thing.

> For me, a nextgen machine that is called "Falcon" really chock me !
> I supposed some of you would be interested with that, as I am.

There's a Unix browser called Lynx. I've seen cars with XL and XE in the name. I've seen products here and there with an ST in the name. I've even seen a lamp store with a logo that looked strangely familiar (it was extremely similar to the fuji symbol). None of it ever made me think that any of these things were important to the Atari community (except maybe the Mint version of the Lynx browser).

Sorry, but I'm just so confused as to why you think this is so important.

Better and better! I'm French, and I think exactly the same (and all
readers of fr.comp.sys.atari think the same and are anger against you,
you are alone), shame on you, I hope other non French people will
understand that other French  people are not like you!

Go speek about Atari games, PS3, Xbox etc. on atari.com forum or on
other specific forum for game, not here or fcsa, it is our freedom.

Olivier

Don't worry Olivier, we all know that French people in general aren't
self proclaimed Atari prophets suffering from serious megalomania.

So far it is just one bad apple, and he is just as unpopular here in
comp.sys.atari.st as in the French newsgroup from what I can tell.

Regards,

/Joakim

Mr. Olivier Landemarre,

We all know that you banished me from your <http://www.lutece.net/> portal that used to be the commercial place for an housesell agency, without any sensible reasons, exactly the 1st of April 2006, the day of the anniversary of the 19th year release of my Eureka 2.12 software. That I was consequently banished from E-mail address and WEB site, tough I had no job since 2 years at that moment, and living with social allocations.

We all know that you're not an ATARIan, because you only owned a 520ST when you were young, and that you require real ATARIans for your activity (I'm one of these poor victims) because you don't have any interest in ATARI hardware, but only with emulators.

There is also a proof of what I'm telling, because E. Baranger was another victim of your "activity" because you denied him the publication of <http://myaes.lutece.net/> with the very famous distribution of ARAnyM that he maintains with his proper software

    <http://ebmodel3.atari.org/Pack_3D/>

We all know that you are against European Political Construction because you were making a buzz against the European Constitution, what I really couldn't bare, because you have primal conceptions.

I don't know what point of non return you will reach against me,

```
but the main thing I can say is that you're one of my best enemies.
I'm not wishing you the "St Olivier" because you haven't any humanity.

I always told you, but I'm repeating it : LEAVE ME ALONE !

ATARIstically,

--=20

Though it's not ethical to laugh on someone's misfortunes or defects,
it's sometimes really funny about him :D

LOL = MDR = Mort De Rire !

Sorry about this french product. "We are the nation that invented ballet
and the souffle and FLC". Our troll should have remained locked in the
fr.comp.sys.atari, but he learnt English somehow. You're lucky that he's
a bit lazy about writing English posts. We have to endure and read HUGE
ones.

D�sol�, "I hope this scum has not in-con-weenienced you"

Quite strange affirmation, fully wrong, you never use email address with lutece.net always atari.org. Web site ok I bane you after you have freely insulting me, but never you have put the real address, always you mention eureka.atari.org, and I not remove it before you have put a new one on an other server. You never pay anything for this service, this was fully free for 5 years I think.

If I said you what was my problems when you have start insulting me, probably you will have shame of you (oh no you will not you never shame of you), and prefer your problems than mine!

> have any interest in ATARI hardware, but only with emulators.

Really, I have always my STf! No interest in hardware, strange I work on a coldfire card, and this probably more difficult than compil software from others. Strange from someone that only see Aranym as solution, to put in on PS3 and wan't to said: This is an Atari Hardware, the proof? Atari made game on it!

>
> There is also a proof of what I'm telling, because E. Baranger

>
>   <http://ebmodel3.atari.org/Pack_3D/>

Really?!!! I have very good relations with Emmanuel and yes I was not agree that it put myaes on his distribution for two reasons:
- For a time you put him against me
- MyAES can't be used (for wdialog) without use of commercial software

(not free! You know this softwares made by other and sailed that you not have permission to redistribute!)
Very strange because Emmanuel still use MyAES and some day's a go I

send him an alpha version of MyAES, because soon (probably after hollydays) we think do a specific version of this pack where it will be probably easy to choose the AES!

Of course you not have my permission to use MyAES for your own pack, it is not a game, develop on an emulator, this is not serious!

>
> We all know that you are against European Political Construction
> because you were making a buzz against the European Constitution,
> what I really couldn't bare, because you have primal conceptions.

Blabla..!!!! All people have understand that who is not agree with you is your enemy, strange vision

>
> I don't know what point of non return you will reach against me,
> but the main thing I can say is that you're one of my best enemies.
> I'm not wishing you the "St Olivier" because you haven't any humanity.

I'm not a St anything, I have help you so many times in the past when you do construtive work on your computer, for sure there is now nobody for help you!

>
> I always told you, but I'm repeating it : LEAVE ME ALONE !

But you are alone! Stop posting stupid messages, I not answer you, because if nobody answer you think your are god.

Good speek on fr.comps.sys.osx boy!

>
> ATARIstically,

Nothing ATARIstically in this!

Bye, I stop annoy you.

Olivier

>> it.

Since that lunatic is in my killfile (and may I strongly urge everyone
to do the same?) I had missed that beauty. And though I generally
refrain from participating in these threads, I can't resist now because
the notion of Philipp and I being xenophobic anti-French, only because
we are French speakers from other countries, is so *unreal*... that I'm
at a loss for words. This is one of the most insane sentences I've read
in my life.

The reality is that we hate the French because their country is bigger,
their wines are better and their women are more pretty. Though I have
my doubts about the latter.

Cheers,
JFL

>> means something for ATARIans. You can't ignore it !
>=20
> Please consider these questions:
> 1. Is the Microsoft project compatible with the Atari Falcon?

No. But you've certainly heard about, so far as I know you, the
projects that ATARI Corps had founded with the Falcon when they rapidly
shipped the Falcon30. The successor to the Falcon30 was really awaited.

> 2. Does it contain any Atari hardware that's not also common to most=20
> machines?

The machines may have changed, but ATARI is still there. The primary
known capacities of the ATARI production were game softwares with
"Pong" and arcades. That is very well known.

We're far from <http://www.fr.atari.com/index.php?pg=3Dproduct&id=3D448>

> 3. Is it related to the Atari community in any way other than a generic=
=20
> word that happens to have been used for one of Atari's computers?

When a so powerful firm is naming a games machine, specially a nextgen
machine, with the "Falcon" code name, it is undoubtedly related to
the ATARI projects.

> If *any* of these are yes, then I agree that this is important.=20
> Otherwise, no, it means nothing for Atarians, and I can indeed ignore=20
> it, no matter what you call it.

I'm feeling concerned with this. You may also be concerned, as I am.

>> that, or you are fooling me !
>=20
> Yes, we are supposed to be talking about Atari computers here. What doe=
s=20
> XBox have to do with an Atari?

Well ... Many peoples have projects about new ATARI machines. There's
hardware projects mainly around ColdFire, and a Virtual Machine that was
initiated by Milan GMBH and concreted with ARAnyM <http://aranym.org/>

What on earth can we do if we have the most famous company that
makes ATARI projects its own strategy ? It will simply wipe out
all wishes that you ever dream about GEM, MiNT or alternative
to the IT mainstream.

> So what if it's a "nextgen machine"? It's=20
> not an Atari, no matter what they codename the dumb thing.

You're not really measuring the effect of the dirty trick.

>> For me, a nextgen machine that is called "Falcon" really chock me !
>> I supposed some of you would be interested with that, as I am.
>=20

Well ... But Apple is the company that produced the Beatles pop group ;)

> None of it ever made me think=20
> that any of these things were important to the Atari community (except =

> maybe the Mint version of the Lynx browser).

Have you heard of the trails of Apple (Inc.) vs. Apple (Beatles) ?

> Sorry, but I'm just so confused as to why you think this is so importan=
t.

Well. So far as I'm concerned by the ATARI history, and all founded
hopes that ATARIans had about the new machines that would follow the
Falcon30, I'm really concerned with a nextgen machine called "Falcon".

I personally own a PlayStation3, on which I'm willing to run ARAnyM.

Best regards,

The sad thing is that this paragraph was probably as much on topic than the original thread was :)

I'm really sorry for all readers of c.s.a.s, because if Fran�ois reach his cruising speed, he will write tenth of ridiculous threads per week, about all and everything, insult people, publish personal information, and in the end never excuse to anyone for what he did.

As a French person myself, I feel the need to present preemptive excuses to everybody here: You will need some real strenght to endure that - or good kill files -.

    Dbug (who know at least one very pretty girl in belgium, has a MegaSTE but no PS3)

Just wondering... wouldn't it be more sensible to use MagX-Net,
instead of iConnect, as MagiC! is required ?
Why so many stacks for so many apps running on the same
environment ?
Why not allow the apps to behave accordingly to the stack that
is already present in the system ?
There is MiNT-Net ? so it switches to the correct stack and
uses it.
There is STinG ? OK, let's use its protocol.
And so on for others.
That isn't meant as a pure criticism, but just an attempt to
understand why so many wheels that need to be reinvented so
many times. That's rather disappointing for me. :-/
As of today, among the many internet apps that I use, I know
only 2 that don't rely on a specific stack (unless I'm wrong,
of course!) : MyMail and CAT.
For all others, I need GlueSTiK, that slows the system down
and sometimes causes crashes. :-(

Regards,

J.-Luc

OK, I forgot to mention aFTP (patched version), and I couldn't
make MyMail work with only MagicNet - though I used to, before,
when I didn't have GlueSTiK installed! :-/
I don't know what I did wrong, but I did it! :-(

Hi,

We can read all about ATARI history from there

<http://www.google.com/archivesearch?q=3Datari&as_ldate=3Dall&as_hdate=3D=
all&nav=3Dm&scoring=3Dt>

All what is archived on the WEB about important facts and figures.

That is really remarkable.

ATARIstically,

Hello, ST lovers !

A new port of GCC 4.2 and binutils 2.17 for the Atari ST is available here:
http://vincent.riviere.free.fr/soft/m68k-atari-mint/

Cygwin binaries are included, allowing you to cross-build ST software from Windows.

Hi,

Any chance of getting Postscript viewing support for Zview ?
Some time ago this was promised to be implemented some day. Would still be nice.

Hi Guillaume,

I had the opportunity to try your enviroment under steem. Compiling/
linking the demo.c works great. But when I try the same for demo.cc I
always get two bombs when linking. Do you have any idea what is the
problem? Steem is configured to use tos2.06 with 14MB of memory. I
updated the inf files with the correct paths.
Can you please explain what are those LDG files and how to update
them? Do they affect the linking process? Shall I install something in
the AUTO folder?

Thanks,
Jozsi

I have an Falcon Mk X - the recased Falcon that was sold by C-LAB
towards the end of the Falcon days. This is absolutely immaculate
except, that the top cover in one corner has had some holes 'drilled'
in the top with what was probably a screwdriver....

I'd really like to have a go at repairing this, and wondered if anyone
had
ideas. The case is metal, and I thought of using car type filler to
fill
the holes, and then respraying the case.

Anyone attempted this kind of thing?

Cheers.

jao

Salve commonly, J.-Luc <Myname.Mysurname@myisp> wrote:

> wouldn't it be more sensible to use MagX-Net, instead of iConnect, as
> MagiC! is required ?

Definitively not! MagiC! is IMHO a synonym for MagiC!, MM and M_PC and
MagX-Net don't run on the last two one...

> Why so many stacks for so many apps running on the same environment ?

IConnect is only 1 stack for a lot of absolute different environments!

> There is STinG ? OK, let's use its protocol.

iFusion (STiK/STinG over IConnect) v1.0 still exist!

> only 2 that don't rely on a specific stack (unless I'm wrong, of
> course!) : MyMail and CAT.

MyMail don't work well on my Quadra840 and CAT supports IConnect and
STiK/STinG on MagiC! but under MM only IConnect works! Only with M_PC
it can use owing to I2C directly the win-stack instead...

> wouldn't it be more sensible to use MagX-Net, instead of iConnect,

Fiffi is from 1997. At the moment I'm happy to get source. Maybe I make it that
is possible that it can use MagiCNet or MiNT-Net. The next problem is that it
run only with MagiC, because it use the threads from MagiC. I saw that there
are some change so it can work with N.AES, but I never test it.

> Why not allow the apps to behave accordingly to the stack that is
> already present in the system ?

Because I must support four stacks: IConnect, Sting/StiK, MagiCNet/MiNT-Net and Draconis

> Why so many stacks for so many apps running on the same environment ?

While anybody think he can do it better. But you are some years to late. We have four stacks and must life with them.

Gerhard

Hi all,

NAS2007.
The event was held this last weekend (29/6-1/7in Gothenburg, Sweden. We had a real nice time and got to see a bunch of both new faces as well as some of the more wellknown. One of the guests at NAS was kRadD who has a blogg and some pics at this (rather extensive) URL: http://twh.homelinux.org/zope/welta/partyfolders/2007/atdemoparty.2007-07-01.7970201294

*GBE 1.51 (GFA Basic Editor)
Lonny Pursells excellent and GEM-friendly GFA editor has been uploaded just in time for a NAS-release.

*AtarICQ 0.170
The GEM ICQ-client has been updated for the first time since NAS2006 and the number of smaller fixes and adjustments is worth a look.

*Spectrum emulator - x128.
Following the saturday releases of AtarICQ and GBE, yet another piece of software has been made available during NAS2007. PeP (Peter Persson) has ported the x128 emulator to FreeMiNT. It needs a fast machine, and it's a bit tricky to install since it uses his experimental joystick device drivers. Feel free to try it out though.

Download links for the software releases can be found here:

http://www.sak.nu/

Thanks to all who visited NAS2007 and contributed to a nice weekend!
More pictures from NAS will be uploaded to the SAK-website shortly, so please check it out from time to time.

Regards,

/Joakim

Greetings,

If I recall, GhostScript could read some .PDF files on the Atari ST-Falcon.
I may have the name wrong.

Is it still available?

Also, has it ever been updated in the last few years?

And is there any other Atari ST-Falcon program that will read/create .PDF files?

IIRC all of those stacks except one have a gateway that allows their
use with MagiCNet. The exception is the IConnect gateway, which was
never publicly released (that I know of). If someone could rescue that
from Vassilis and, with his permission, release it into the wild?

BTW, as a matter of interest, are you using the DDP Translations
resource file from fiffi 1.30 as a basis for 1.50b?

>Can you please explain what are those LDG files and how to update
>them? Do they affect the linking process? Shall I install something in
>the AUTO folder?

    No the SCREEN.LDG doesn't affect the linking. If the shell starts with
the background image, then the LDG runs correctly: it's only a collection of
graphic routines.

    The problem should be in the linker itself. Does it use other opcodes
than de 68000 ones? (I don't know what processor steem emulates).

    Being not a specialist of GCC, I can't help you more.
    I mostly used it to compile the MPEG2 routines and then, step by step,
convert them in assembler.

    Guillaume.

Last time I checked IConnect only worked with a modem, has this changed? I
haven't used a modem since 2000, and currently I don't know anyone that
still use one.

Thanks for the info, Looks Cool!!

I should have everything needed to run it here.

Will it work with just Plain TOS 4.04 with a FPU or does one need to run
Mint and or Magic?

I still like using Geneva, have nothing against Mint / Magic.
However, I don't like to use alot of Stacks just to work a program,
if ya know what I mean.
Phantomm

May be, but the main problem with such gateway is: they're in general
very slow or don't work well...

Greetings,

I'm looking for collections of Atari ST-Falcon Software Collections
that are on CDs/DVDs. Including Atari 8-bit as well.

Personal Collections
Shareware/PD Collections
Any in Between

After reading mags like ST Format in the past, I remember
seeing PD/Shareware Collections of software from OverSeas.

I'm really interested in Collections like this, if anyone has some
for Trade/Sell/Etc. then send me a discription of the CDs/DVDs
that you have and maybe we can work something out.

I do have some of these, but I know there are some that I don't have
and could make use of some of the software.

Also interested in Atari 8-Bit / ST-Falcon Software for use with external hardware,
such as DIY kits and the like. I enjoy using my Ataris to control things.
8-)

E-mail your discriptions and etc to me at.......
phantomm@bellsouth.net

Keep it Rockin!
Phantomm

Thanks for the tips - that's a great help. I'll see if I can find the
epoxy.

I assume it was for extra "cooling" as its over the PSU, but the Mk X
case already has holes for cooling on the left hand edge so its
a bit odd.

Thanks

jao.

Derryck,
I use an Iconnect gateway with my MagicNET setup. If anyone is
interested and wants to have this setup on there computer let me know.
I will review what it took to get it going and send the appropriate
files and explanation on where all the files are to be placed. As far
as the sources are concerned. I dont have those but I have contacted
the author just this week to see if he would be willing to hand over all

sources including Iconnect, Draconis and MagicNET so continuing support
can be achieved.

Thanks,

Don't know! I don't have any original hardware anymore - I mostly use
MM on a Quadra840 or a G3-MT (with PowerFPU) and there it simply
works! I've also M_PC but Zview don't run on vulgar MC68000...

You're right, I saw the same problem yesterday.
This was not a problem for GCC 3.4.4, the current version on Cygwin.

This problem is trivial to fix. It is just a missing cast.
You just have to modify the line 1536 as this :

```
   char* ptr = (char*)sym.a_name;
```

Then you will be able to complete your compilation !

I'll upload a new patch containing this fix.

Good luck.

Vincent

Cool! Not a C fan myself, but this is a good thing for the Atari
platform :)

Thanks for sharing :)

Anyone heard from ST-Labs (http://stlabs.free.fr/) lately?
They have some very interesting hardware projects in the works, but
none of my emails have been replied to.
Are they still in business?

Hallvard

Someone with the initials MB at the Cheshunt Computer Club should be
pricking his ears up at this time!

I had a very similar setup to yours, Carey, and it worked very well.
Blessed if I could recall what one had to do to get it working though.

Some years back, someone posted a very comprehensive guide on setting
all this up, including support for multiple news servers IIRC.

> on where all the files are to be placed. As far as the sources are
> concerned. I dont have those but I have contacted the author just this
> week to see if he would be willing to hand over all sources including

I guessed that there must have been some unsurmountable problems (with
the IConnect gateway).

Hi Hallavard,

     It took him a while to reply to my first e-mail(months I think).
The last response I got was He will have the price and availability of
TTRAMIDE in June. The e-mail was on May 7th and I've heard nothing
since.

Gerhard,

Have you thought about using the HighWire network module code?
If I remember correctly, it supports all the stacks except Draconis.

```

You're wrong, you just have compiled gcc !
From your gcc build directory, type "gcc/xgcc --version" to get the proof !

More explications :
I put the build scripts online, but I didn't describe the whole building process (I plan to do it later).

The problem is that the gcc package contains the compiler, as well as libraries dependent on libc (such as libstdc++-v3). But the libc is not provided by GCC ! We must use the MiNTLib as libc (Linux uses glibc, Cygwin uses Newlib). The MiNTLib cannot be compiled if gcc is not installed. The package gcc cannot be compiled if the MiNTLib is not installed :-\

You encountered an error because you tried to compile libstdc++-v3 (from the gcc package) before having installed MiNTLib and PML.

Here is the solution.

Step 1 : binutils
Compile *and install* the binutils. Update your PATH variable to include /usr/local/m68k-atari-mint/bin. You must be able to run m68k-atari-mint-as from any directory.

Step 2 : gcc (Part 1 - Compiler)

Make only the gcc compiler. The key is to use "make all-gcc" instead of "make". You just have to follow my build script up to the comment "Now, compile and install the MiNTlib"

Then you'll build the libraries with this partially compiled gcc package.

Step 3 : MiNTLib
Just follow the build script to compile *and install* the MiNTLib.

Step 4 : PML
Just follow the build script to compile *and install* PML.

Step 5 : gcc (Part 2 - Libraries)
You can now build the remaining stuff in the package gcc with "make".
Just follow the build script where you stopped in Step 2. Install gcc.

That's all ! You should be able to to run m68k-atari-mint-gcc.

In my binaries, I left multilib enabled. It means that all libraries are built multiple times, with some variants and combinations : standard, -mshort, -g, -m68020-60... So building step 5 is very long. When the patches and the build procedure are good, it is not a problem, you just have to wait. But when you are struggling for making it work it is easier and faster to disable multilib. This can be done by appending --disable-multilib on the gcc configure command line. You'll get only 68000 libraries, without FPU, and with sizeof(int) == 4.

Good luck !

Vincent

At the moment not. I will look if it possible, Thanks for the idea.

Use someone Highwire with MagiCNet and the mintnet.ovl and work this? I have make me a special ovl for MagiCNet.

Gerhard

Bonsoir :)

Now final version. Voil� !
Litchi is a new FTP client, running with tcp/ip stack STiK2, STinG or
compatible.

Download on my homepage or directly in the folder:
http://ptonthat.club.fr/files/ <- litchi10_uk.zip (100 KB)

New features, since the beta3 release:
```

```
- bugfixes:
  - automatic opening of newly created local folder (final "\" was forgotten)
  - remaining space on correct disk (bad parameter in Dfree())
  Thanks Cooper/Paradize
  - alert #254 and exit, when listing a file more than 2 GB length
    The files more than 1 GB length are now skipped from downloading
  Thanks JL.CECCOLI
  - the Console did not open with the menu item
  - display problem of Console window is not topped
+ recursivity for local files and folders contents deletions
+ recursivity for files and folders contents uploads
```

My goal was to have the same functionnalities of aFTP, so I could
delete it on my hard disk. Development is finished. There may be some
fixes and enhancements, if people want.

Hope you'll enjoy.

Yes on the SPAM.. I'm debating just deleting the HighWire Wiki.

Talk with AltF4 about the network ovl's for HighWire. If i remember
it's mostly his code

They certainly did!! At present I'm using Iconnect and STinG but
would like a unified system that MagicNet with the Iconnect gateway
provides. I'd certainly appreciate any help you can give regarding
this setup.

Hi all. I'm more of a Mac person, coming late to the Atari game. I'm
used to needing to tell the computer that I want to turn it off, using
e.g. the "Shutdown" menu option on a Mac, and only then turning off the
power. I've also used an Atari STf before, which didn't have a hard
drive. Now I have a Mega STE with a hard drive. Can I just turn it off
when I'm done with it, or do I need to shut it down through software
first? I just don't want to damage the hard drive.

After you've quit any running software you can just turn it off.

Different rules apply if you have alternative operating systems such as
MagiC etc. In such cases, there will most likely be a Shutdown menu
item.

Did you miss this:

To connect simply use kdxvcfa.dyndns.ws as the address, a
username/password is not necessary.

I think you will find it only fits one way. The "plug" on the drive has a plastic "tongue" along one side of the pins. The "socket" on the end of the cable usually has a recess on one side that matchs the tongue. I am pretty sure if you try the wrong way it just won't go.

Hi Dave. Thanks for your reply. That's what I would have thought, which
is why I didn't write it down when disassembling. But upon reassembling,
I found that the cable would really go in both ways. See:

http://ryandesign.com/tmp/atari-mega-ste-floppy-drive-power-cable2.jpg

Could someone with a MEGA STE please open it up and see which way the
power cable is supposed to be connected to the floppy drive? Thanks so
much!

-Ryan

i surely accept this input guuys,,,especially rod...so far pascal
isn't that bad and most commands are similar to that of which i carry
up from basic.
but i should remain true to my objective and that is to learn and
obtain knowledge of the language i have choosen, basic was good to
learn program flow , command words along with identification of
variables,and ,strings ....
now pascal has shows areas of libraries , stronger program flow
methods ...quicker procedure ,,,,i guess i'd like to enjoy a steady
learning pace,,,and not jump right in the pointer filled land scape of
'c'
a little about myself , i picked up programming four or five years ago
so i am relitivealy new!!!! having no ideal a symbol from a pointer
from a variable,
sorting this shuffled mess has been quite a task , thanks for
expressing enough interest to guide me past the "nooks" and "cran-ies"
of programming ...i will eventually progress , even if it's years
ahead.

charles

Interesting, the Apple II archive is simply a copy of the Asimov
Archive.

Those particular plugs are the same as a PC's cd audio cable and have no
specific orientation. Cheap and nasty way of doing it, very easy to plug
in backwards. If it is plugged in backwards it can be quite bad as it
would be feeding 12v into a 5v rail. Anyway, B is the right way;-)

I've got Personal Pascal if you like, it was on a cover disk years ago.
Looks like all the program files are there, few docs, some code samples.
Cheers

Thanks for your reply, Mark. That was exactly my concern! I didn't want
to fry it since I have no replacement. I reassembled it with the cable
plugged in the way you indicated, and it worked.

For the archives: with the Atari MEGA STE opened up and its top flipped
upside-down, the correct way to attach the floppy drive power cable is
with the yellow wire to the right, the red wire to the left.

Dave, I also now see what you meant about the plastic "tongue" on the
plug fitting in to a matching recess on the socket. Well, on my cable
they don't seem to actually fit together much, but I can see how they're
probably supposed to do that.

Thanks again, everyone. Now my Atari is purring along prettily again.

Well, I'd like to know what the compatibility of those different development systems with the ST serie?
Do they run with a 68030?
Do they support MINT?
Do they support other resolutions than the ST standard ones?

Guillaume.

And all of the IBM PC files have 2007 as a date :-(  If all the dates
have been reset, that's not very useful at all as a historical
archive...

Hey folks. The thread about the Vintage Computing FIles Archive made me
wonder...

If there were to be a worldwide repository of Atari knowledge and/or
programs... an Encyclopedia Atarium, as it were... what current online
resource might it resemble?

I know that there are (or at least were) several Atari-related ftp
sites, but it'd be great if there was one place where you could find
everything, wouldn't it?

Ideas? Suggestions?

Joe Mirando

Hi Joe,

May I suggest you to have a look at <http://eureka.atari.org/atari.html>
that includes a lot uptodate bookmarks about ATARI universe, including
also FTP sites and an *ATARI Search Engine* provided by Google Co-Op.

You may find useful information about the state of our scene.

Best regards,

If I remember well, GFA has a special way to encode the floating values and uses high speed routines for floating point operations. If a standard IEEE encoding is not needed, then GFA gives you a real power in that way.
Well, if you have a FPU... then "C" is better!

Guillaume.

Put an Eiffel in the case and used a standard PS2 keyboard & mouse.

Francois,

Ah, but think of it... all the available information and applications (free/shareware and public domain, of course) all in one place! Our own version of the Encyclopedia Galactica!... the Encyclopedia Atarium! <g>

I am not, as you may think, ignorant of the state of the Atari world, having been involved, in one aspect or another, in our scene continuously for the past 20+ years.

My question wasn't really "where can I find stuff", but "wouldn't it be cool if we could find it all in one place, and what would the darned thing look like?" I should have been clearer in my original post.

Would the overseeing of such a huge amount of data be prohibitive even for a site that was database driven? Would indexing and re-indexing even be possible with such a huge amount of data?

I took a quick look of eureka.atari.org, and it's quite an impressive collection. But links are an imperfect answer at best. Think about it... how many times in a month do we see "whatever happened to <fill in your favorite site url here>" posts?

If there was one main repository, mirrored at several other reliable locations, we could... dare I say it?... we could rule the world! [grin]

Would the sum-total of all Atari knowledge fit on a DVD-R? A dual-layer DVD? Or would we, perhaps need a special device that could be carried with an individual, and connected to the Encyclopedia Atarium via hyperspace bypass?

It would out=sell the Encyclopedia Amigaum by a large percentage for two reasons... First of all, we'd make the Encyclopedia Atarium slightly less expensive, and second, we would print, in large, friendly letters the words "DON'T PANIC!" across the front.

Naaaaahhh. It's been done. [grin]

Anyway, if someone were to undertake this project, and the sum total of Atari knowledge was collected and deposited in such a place, who would be our 'Mr. Atoz'? (10 geek points to anyone who recognizes that reference)

Joe Mirando

OO originates from Simula in the 60's, so the concept has been around for decades. There are object oriented Pascal-variants, and IIRC Pure Pascal is one of them. I haven't used Pure Pascal myself, but from what I've heard it's pretty similar to the earlier object oriented versions of Turbo Pascal.

Hello all;

Version 3.91 of TeraDesk open-source desktop for the 16-bit and 32-bit
lines of Atari computers is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

This release brings some small improvements related to formatting and
copying floppy disks, several bug fixes and size optimizations (program
size has been reduced a bit).

See the history file for more information.

Have fun.

His rather lengthy text seemed to make a major point about the value
of simply mirroring other's archives, so I don't get the impression
that he is claiming ownership.

In fact, he is correct--copying archives *is* a real value, since it
improves availablility through distributed redundancy.

On reflectiuon, the MEGA was produced when Atari was well on the slide to
oblivion, so I suspect they used whatever was in stock that would fit, so it
could be the "adjusted" a non-standard connector...

> Thanks again, everyone. Now my Atari is purring along prettily again.

Behind the STacy4 sticker are two screws that must be removed to allow
enough room to dismantle the case.  Beware that it's not an easy task
to reassemble everything.

Hi Peter!

Out of curiousity, I am totally crap at programming. :-)

I think it was mentioned before, that C is not so developed on ST/TT as
GFA-Basic is. It's like the older ROM Basic on various 8bitter, some
commands can't be faster, not even in Assembler. (obviously a tough
compiler, going with GFA, IMHO.)

Although, I find the ST/TT/and higher CPU is one of the best for
Assembler programming. Beginning with the 68000 (32bit), of course :-)

Well, as I said I know very less about coding, I would go with
GFA-Basic, indeed. And Assembler, if it were my primary-time
hobby/fun/work etc.

Best Regards,

Daniel Mandic

Actually, most have April 1st, 2007 as the date.
I get it!  It's a joke!!

What I can't understand though is why is he posting it on atari
groups. From the http mirror I haven't seen any Atari related stuff
(but then I didn't search too much....)

I see.. Funny. I haven't looked at PureC/Lattice, but I often study the assembler code generated by GCC just to be on the safe side. With optimizations enabled, I often find it hard to beat the compiler by hand... Anyway, judging by the applications created using it, the GFA compiler is a lot faster than people might think.

Not sure I agree; GCC is one of the better compilers around imho..

68000 assembler is really pretty, yes.

Personally I'd go for C and assembler, but many talented coders have proven that GFA is a fast and flexible language. If you're using a multitasking OS, try Lonnys' GBE environment. Truly amazing work.

Yes, there are something like (real) register :). Not to mention the forward compatibility, e.g. the AMIGA OS was written in Assembler and C, already with 32bit. A 020-060 can then run the same code, just with 32bit RAM access (if available) instead of 16, or even 8 (68008).

Oh well, I thought there is nothing good C for ST line.

It's just 3 weeks until the third annual Vintage Computer Festival, Midwest edition. We've got a few interesting speakers lined up, and more to be added shortly.

So come all ye collectors, see the speakers, and even exhibit your favorite items from your collection! We still have plenty of space to fill up with exhibitors. If you're interested in being an exhibitor, please sign up before Sunday, July 8th. Don't wait until the last minute, or there may not be space left!

VCF/Midwest 3.0 will be July 14-15, at Purdue University's Stewart center. Speakers will run from 11a to 2p each day, and exhibits and the marketplace will be open from 2p to 6p. Admission is $5 per day for access to the whole event, and kids 17 and under get in for free.

For more details, and to sign up as an exhibitor or vendor, please see the official VCF/Midwest 3.0 website at:
http://www.vintage.org/2007/midwest/index.php

If you have any questions, feel free to send me a message at:
vcfmw at computer-refuge.org.

Pat

;;
lonny , i love pointers and memory blocks...never used memory blocks ,
but i suppose thats the same as dimension-ing an area of memory .
pointers within gfa are my favorite ....*a$,,,eh?
is a memory block a reserved area of space ?space for each char value?
1-byte , 2 - word -4 integer,8...16   etc etc for as many

any how keep in mind i'm still learning with little holding me back
from experimenting...by the way , i think i may go back to gfa or
omikron, cause pascal is very bad mannered at the moment.

charles

FWIW:
WinHTTrack mirroring was slow (24kB/sec average over a couple of
nights), but it seems to have downloaded fine.

Hi,

Have you ever been so fan with arcade games to spend
all your spare time playing in pubs when you were teen ?
Have you ever spent nights playing games on your ATARI
computer with friends and family with really good ones ?
One of my "best of" game is out on the PlayStation3. I

played it on my 1040STf in 1986, on my MEGA STE4, on my Falcon30 in 1993 with "Backward" to slow down the 68030 from 16 to 8MHz and eliminate data + instruction caches.

I mean this arcade game is *Joust* just released on the _PlayStation3 Machine_ enhanced with network playing.

<http://www.jeuxcherche.com/go.php?ressource=3Dvideo&id=3D44465>

You've understood that I strongly recommend it to you.

Will you hit the pterodactyl ?

Have fun :-)

Fiffi make it possible to access an FTP server. FTP stands for file transfer protocol and makes the transmission of files between computers of all kinds of operating systems and system architectures possible. On FTP servers are often the interesting software archives on the Internet.

Furthermore, it is possible to upload files on your website.

This Fiffi version based on the source from J�rgen Koneczny.

You need the following programs for using Fiffi:
- MagiC (Atari, Mac, PC) v4.5 or better and
- IConnect v1.0 or better.

Changes between version 1.3 and 1.50b:
```
- NEW: When clicking on the path display, the popup is now aligned to
       the mouse cursor position.
- NEW: Keyboard control of the FTP window completed:
       <Return>:           Selected file/directory will be loaded/
                           opened.
       <Control>+<A>:      Selects all files/directories.
       <Control>+<Delete>: Deletes the selected file, and only these!
- FIX: While Dragging&Dropping of directories to the FTP window,
       there is no more halt of the system.
```

Download program and source:

Look around eBay, but be wary of old supplies. 18VDC 2A is not that common, and some older supplies can drift off of specification after enough years. Alternatively, you can use a battery (the Stacy will actually accept anything from 10.6 to 18V and converts it internally to 12V). See below for more details.

> 2) I am unable to get power with other adapters. Is this okay?

If your adapter is under 2A the STacy probably won't start. It has a significant startup drain.

> 3) Does the Stacey4 have a fuse somewhere?

I think so, but no longer remember for sure. It's been six years since I owned one.

The STacy expects an input between 10.6 and 18VDC. (The STacy has a 'power low' light that comes on around 11.5V. However, the STacy keeps running until somewhere around 10.5V).

I experimented with the STacy in 2001 and made several posts in 2002 regarding powering the STacy with batteries. Here's a brief summary:

Don't use "C" cells! Atari and I both tried it, and it doesn't work well (you get 15 minutes per charge). With some expensive high-amperage cells you can get 30 minutes, but internal packs just don't have enough juice!

However, a 12V cord to a 12V battery will work, but since the "power low" light comes on at 11.5V you will have the "power low" light on frequently. Also, you need to have a large enough battery to handle the drain. Expect to use 2 - 3 Ah (Amp-Hours) of capacity for each hour of use for large (auto-sized) batteries and 3 - 4 Ah of capacity for smaller batteries due to the voltage drop. The commonly available "jumpstart" batteries typically hold 14 - 21 Ah and thus I'd suspect that they'd work for several hours. (FWIW, I used a 40 pound 72 Ah lead-acid wheelchair battery (13.8V) to power the STacy for several years and managed over 24 hours a charge!)

Before I go, let me note that I'm going off of memory, although I'm reasonably certain my numbers are accurate. Still, no warranties are given or implied.

Galen

Hi Jammer,

Thanks for the reply...no, it doesn't make any sense...to me anyways.

Thanks

Hello Sam,
I am very curious about this card as well. I have not heard anything from the developer. I even put myself down as a possible tester when a workable prototype was available. Been so long I might have to write the guy agian and see what is up. I thought OzK was one of them working on the software end of it. Might have just been the drivers not sure.
Agian been a long while. Hope we hear some good news

Thanks,

I have an STbook NST141 with battery pack 9.6V 1300mAh. Power supply 17v 700 mA
It ended its days because I was trying one day to install a new harddrive.
Never got it to work again.....

Bonsoir :)

Download on my homepage or directly in the folder
http://rajah.atari.org/files/ -> litchib3_uk.zip (100KB)

snapshot: http://rajah.atari.org/images/snapshots/litchi_snap.png

News: console and statistic (please activate them in the options config.
disabled by default coz it costs CPU time on ST 8 MHz).

News in details:
- internal database numbers, unsused are removed (listing will be quicker)
- RSC adaptations for 640*200 screen rezolution
- if 8+3 filename convertion and if filename already present, the dialog
  will always appear.
+ warning alert if using accent or space on foldername or filename
 (FTP protocole do not manage those, it's dangerous to use them)
+ console (disabled by default, activate it in the options), choice to
  display errors, warnings, informations, FTP protocole
+ data flow and estimated remaining time computing (disabled by default,
  activate it in the options, doing this maths may slow data transfers)
+ LITCHI.BUB file for helping bubbles (carefull, in the BUBBLGEM.CPX,
  check 'top only' if you have checked 'help deamon', to avoid nasty
  blocking by bubble during files transfers)
+ new dieHardUser behavior: if 'Control' key is pressed at start of a
  drag&drop files (local to remote, remote to local windows only),
  then the files will be MOVED instead of COPIED.
  (deletion at the source, if transfer was correct)

Hope you'll appreciate.
Next step is recursivity (transfer of folders contents), but i dont
know if i will be able to code it.

Voil� !

Hello,

Yes this does help. That is bascially what the article said to do. I have only one question, where is the power supply in your tower? The one in my old Hades case is too low and i cannot move it up unless I cut through the back of the tower. When I get my CT63, I am going to install it without soldering as my skills there are very bad. Thanks for the information.

>Edward,

Hello Coda,

The Micro PSU could be another option for me. It is powerful enough to use on the Falcon and a whole bunch of extras like a Jaz drive, 3.5" drive and two CD drives? I will have to look into that, but everything is at stand still until I get the CT63.

This question is to all you people who have already put your Falcons in a
case. What did you use to extend your keyboard?

You are correct here. When I start, I plan to take one step at a time. Before everything, it just would be nice to have all the cables, power supply and the upgrades all in from of me so I can get a picture of what I have to do.

Actually I bought a VGA adapter for the Falcon that is about 5 inches long. It should work for me. I bought it on Ebay. I bought two and the other one was shorter, about one inch.

I didn't recased my Falcon but i've recased my old ST. I took the old case, cut it with a saw, closed it with parts what i have left over and solderd a connector by myself. BTW: Nice feature was the power and the reset switch at the keyboard. :)

bye from germany
Bernd.

I used a modular socket, the kind that you get in a DB25<=>RJ45 plug.
I wired this to the Falcon and then this allows me to use a MegaSTE/TT keyboard.

I purchased a keyboard adapter, allowing my to use a MegaST keyboard for
  my Falcon.  I really didn't want to go the route of using a regular pc
keyboard.

Edward, I feel exactly the same way....I'm even worried about soldering
the two wire which go from the CTCM to the CT060!!  That's about all the
soldering that I'll attempt.
Furthermore, I would rather have the lead out plug in to the Falcon
ports, and the other ends attach to brackets and those get screwed in to
the backplane of the tower, the same way as pc boxes do.

Edward, what do those vga adapters look like? I've got (if I can find
it)one extra keyboard adapter......perhaps a trade of some kind! :) :)

    The only pascal I saw was the Pure Pascal, long time ago!
    It's a very old one, 20 years ago it could look as a serious development
system, but now, it's obsolete.
    The editor used to reserve 80 bytes for each line, whatever was typed
in. So this limited the size of the edited program!

    But, if anyone else has "newer news"...

    Guillaume.

Hi,

in the nineties, I was the author and maintainer of a couple of
programs for the Atari (TOS), and I'd quite like to have a couple of
screenshots of these programs. Unfortunately, I don't have the
original source code any longer, nor do I have the right hardware
setup to run all of them. Are there any enthusiasts willing to help?

The programs are

=E9gale - a tool to compare and edit files. This runs on later TOS
systems (such as MagiC) as well. Developed 1993-98.

Tetric - a Tetris clone for b/w (640x400)  with my extra cheesy
background music and multi-player option via MIDI network or modem
connection. Published in 1992.

X-Point - a news&e-mail client for a small network of BBSes, Starnet,
which was based in Germany.

ClickRun - a graphical shell that allowed users to quickly access
programs and files. A bit like today's OS X "Dock".

I've managed to run NoSTalgia, which is neat, but if any of you here
have screenshots (color, b/w, anything will do), please drop me a line
(by direct e-mail).

Thanks
David

I used to program quite a bit in Pascal at university. At that time I only had my Falcon and did a lot of programming using High Speed Pascal. This is a fairly good Turbo Pascal clone, it even has BGI libraries. It also has GEM and AES libraries, so you can develop GEM applications if you want. Unline Pure Pascal (which I don't have any experience with) it doesn't support the OO extensions in later versions of Turbo Pascal.

I would say, forget Pascal. It was designed as a tool to teach programming, hence the reason why it is (or was) so present in schools and uni's. Of course there were some great app's written in Pascal, just as in any language, but you are much better off learning C. That's of course if you really don't want to stick with GFA, which is actually a quite flexible and powerful language.

If you want to program C on the Atari, I think there are these choices today:

1. Hisoft C. Interpreted C, but compiler is available. Obsolete, and no support anywhere, AFAIK. I don't know anyone using this today.
2. Lattice C. (Also by hisoft). Professional and almost complete C compiler with some C++ syntax. Obsolete, no support, but fairly comprehensive manuals. Some Atari programmers still use it (me included) so answers to tricky problems can still be found (the archive of the CSASP newsgroup is useful). Can sometimes be found for sale on ebay, and some Atari vendors may still sell it.
3. Pure C. Unless you speak German, there is no documentation, apart from a small English introduction and basic usage guide. Quite a few Atari programmers still use Pure C though. I think HDDriver is written in Pure C. There are good libraries available for Pure C (Godlib springs to mind).
4. Gnu C/C++. You need a MiNT installation to use this, and some knowledge of how to work in a Unix environment. Quite a few developers use this package, a lot of dev is done with GNU C, not only on Atari, but also on every unix platform in the world, and others (its even available for windows, but the unix version can still build windows binaries!). If you want future compatibility, or to port code from other platforms this is the one to go for. Atari libraries are available.

Good luck.

Sure that you mean Pure Pascal? The last version that I have is form
1995-06-31. Texel and CAB are make with Pure Pascal.

Hi,

You can have a look at "Alice Pascal" from its author page

<http://www.templetons.com/brad/alice.html>

I guess it is a good entry point in that matter :-)

Best regards,

>Can you send me your complete develop environment as zip file?

Sure, I put it on my page:
http://perso.orange.fr/gtello/gnu_tos.zip

7 Mb...

It's the copy of the folder that was located on disk N:, so
N:\GCC\etc... You may have to change some paths.

The shell itself is:
N:\GCC\TOOLS\GCCSHELL\GCCSHELL.APP

Depending on your video system, you'll have to update (or not) the SCREEN.LDG (the same as the one used with MyAES).

It's been some months since I used it for the last time, I'll try to help if I can, or I'll redirect your questions to Olivier if I can't answer myself.

Guillaume.

It is my belief that archives like this one should be provided without any limitation to the end users ability to utilize the archive. These archives are getting harder and harder to find and because of that we all should do what we can to let those who want to mirror our archives do so. As such I am now bringing this archive to the vintage computing community. I have not and will not put any limitations on how users can utilize the archive provided here. Users can freely download as much or as little of the archive as they want. Users can also freely contribute as much or as little to the archive as they want. This way people will be able to mirror the archive easily which will help ensure the files contained in this archive have a nice long life span. This will also allow this archive to grow freely and become an ever increasingly useful resource to fellow vintage computing hobbyists. It is my hope that people will take advantage of the great disk space and bandwidth provided here and both contribute to and download from this archive. This will allow users to have a good solid place to go whenever they are in need of a file for their vintage computing hobby. With the resources provided here it is my hope that with others contributions and utilization of this archive that this will become a great resource for all vintage computer hobbyists. That's right, there is no certain vintage computing era this archive is limited to (except the 2000+ computers and their related files), as it is my hope that this becomes a great central archive of everything vintage computing. A resource that makes the vintage computing hobby easier and less intimidating by not requiring hobbyists to go all over the internet for the files they need. Hopefully someday this goal will be met for the benefit of everyone who enjoys vintage computing as a hobby. Enjoy! :-)

FAQ

Where are the files?

The files are hosted on a KDX server. This provides me with an easy to administrate server and it provides everyone else with a nice, easy to navigate, server with which you can download/upload files and chat. If you don't know what KDX is click here for details on what KDX is and how to use it as well as download links for the client. To connect simply use kdxvcfa.dyndns.ws as the address, a username/password is not necessary.

What about http/ftp access?

You can still access the archive via http by clicking here, however note that the http copy of the archive will no longer be updated. Instead it is highly recommended that you use KDX to enjoy the latest additions to the archive. The same goes for ftp uploading, please upload via the Uploads folder in KDX instead as the archive will now continue to be maintained only via KDX.

Why the change to KDX?
Http access was great for a while. However, http access was being donated and as such disk space was limited. The donated disk space is now getting tight and as such I had to think of alternative methods of

keeping the archive online. The best way I could think of was to host the archive myself since I have a bunch of HD's here which thus provide plenty of disk space for the continued expansion of this archive. I could easily have setup http access myself but I thought that since I was doing the hosting myself I might as well use KDX. Why? It's easier to administrate, the administration interface provides many easy to utilize controls for what users can and can't do. It has everything for the makings of a community, file browsing for downloading/uploading, a chat room, private messaging support, and a news section. In addition KDX is completely free and has clients for all the best operating systems: Linux, Mac OS, and Windows so no matter what OS you use you can still enjoy this archive. So now the archive is being provided and maintained via KDX.

How can I contribute to the archive?

To contribute to the archive simply upload your files in the Uploads folder

To expedite the sorting of uploads please do the following when uploading files to the archive:

* Look for a folder corresponding to the type of computer your files are related to (Apple, DEC, Commodore, etc)

* If one exists go in it and place it in the correct category sub folder (e.g. Utilities, Multimedia, Office, etc)

* If the folder corresponding to the type of computer your files are related to doesn't exist or the correct category subfolder doesn't exist create it and place your files inside of the folder (if you create a category subfolder for a category that doesn't exist publicly and your files are determined to be able to be legally hostable, the new category will be created publicly with your files inside of the new category)

This will help speed up the sorting of the uploads by avoiding mess and clutter as much as possible. Thanks! :-)

Uploaded files are not instantly made publicly available as it is necessary to review the files for possible legal issues which could prevent them from being able to be shared publicly on the server, the upload folder is checked daily and any newly uploaded content that is deemed legally sharable (e.g. abandonware and/or software which was made by a company that no longer exists or still exists but has long since abandoned the software and does not care if the software is shared) will be sorted in the appropriate publicly accessible folders.

What era or type of vintage computer related files are allowed in this archive?

There is no specific era or vintage computer that this archive is restricted to as long as the file(s) don't relate to any computer made in 2000+. It is my hope that this becomes a great central archive of everything vintage computing. A resource that makes the vintage computing hobby easier and less intimidating by not requiring hobbyists to go all over the internet for the files they need. Hopefully someday this goal will be met for the benefit of everyone who enjoys vintage computing as a hobby.

Why should I contribute to/download from this archive?

This archive is unique in that it is maintained with the belief that there should be no limitations in place for how one can utilize this archive. This archive is hosted on a server with 200GB of disk space and 2.8TB of monthly bandwidth, this ensures that everyone can enjoy the archive equally. In addition this archive is hosted in a state of the art data center in the USA, this means that the server has high upload and download speeds, something not every vintage computing archive has unfortunately. The high bandwidth and disk space available for everyone's use ensures that everyone can equally enjoy this archive with nice fast speeds both up and down. This in turn makes it easy for people to download the files they need and for people to contribute to this archive without spending a lot of time doing either. In addition every file uploaded is backed up locally so that if the hard drive in the server goes bad the files will not be gone and can easily be reuploaded (and they would be as soon as the hard drive got replaced). Not only that but because I encourage people to mirror this archive you can rest assured that I will not be the only person with a backup of this archive so that these files will have a good, long life span.

Do you backup the archive?

Yes I sure do. Every time I check for new uploads I backup the uploaded content locally onto two hard drives.

Can I download the entire archive?

Yes! You certainly can using something like wget. I do not believe in limiting the potential of these types of archives as explained above and as such there is nothing stopping you from downloading the entire archive. In fact I encourage people to mirror this archive as it'll help ensure that the files stay around longer. Also note that while we won't stop people from downloading the whole archive for their own personal use (i.e. they have no intention of later sharing the archive with others) it is preferred instead that in this case files are downloaded individually as needed.

What can I do if I find one or more files that are wrongly categorized?

Please email me at hexstar@gmail.com with the location of the file(s) in question and the location where you believe they should be moved to.

How can I contact you?

You can contact me at hexstar@gmail.com

Hi everyone. I posted this question to this newsgroup 6 months ago and didn't get a good response, and then I forgot about the Atari for awhile, but now I'm getting back into it -- just got a synthesizer again and would like to read my songs off my floppies. So I'd appreciate some help from a fellow MEGA STE owner.

I disconnected the floppy drive's power cable, without realizing that it would physically reconnect to the drive in either orientation. Now I want to plug it back in but don't want to fry the drive by plugging it in wrong. So the question is: which way should it be plugged in?

http://ryandesign.com/tmp/atari-mega-ste-floppy-drive-power-cable.jpg

Thanks in advance for anyone who can set me straight on this!

That soundsok to me. I have the DEKA hardware from Wiztronics. I plan to use
that, but if things bad your solution is a good one. I like the TT and Mega
keyboards.

One more, how about the reset and hard drive light connections. My tower has
those, can Ijust connect them to the Falcon motherboard or is there some
modifications involved?

Yes I want the ports to be screwed in the back of the tower also. I am still
checking for someone to do this for me. There may be someone locally who can
do this, but I have sent some emails out.

Actually I may need this one, but you can try Best. The sell them. When the
CTPCIboard comes out we will not need it all.

Back in 1986 or 1987, I bought Personal Pascal from OSS for my Atari 520ST and made heavy use of it for several years. At the time I found it quite adequate, but I'm not sure how it stacks up today against other Pascal compilers for the ST. One oddity about it is that it includes GEM interfaces, but it modified and simplified the standard GEM interfaces. Thus, if you learn GEM programming via Personal Pascal, you'll have to re-learn it if you subsequently change to another language. Personal Pascal's GEM interfaces are odd in that they let you build dialog boxes, menus, etc., without using a resource editor, which is a requirement of most other ST languages. If you've got a separate resource editor, you can still use it; but if not you'll have to code dialog boxes, etc., by hand in the main program.

For learning Pascal generally (particularly an older one like Personal Pascal), I can heartily recommend the book _Oh! Pascal!, 2nd Edition_ (1985) by Doug Cooper and Michael Clancy (ISBN 0-393-95445-5). Checking Amazon.com, it seems that the book is long out of print and hasn't been updated in a while, but it's extremely well-written. Amazon has links to used copies for as little as $0.01 (plus $3.99 shipping!).

Others have suggested bypassing Pascal in favor of another language, such as C. There's something to be said for this, particularly if you want to learn something that'll translate into marketable job skills. IMHO, Pascal's main limitation is in its memory handling -- or at least, that was the case ~20 years ago. (I've not programmed in Pascal in over a decade.) C gives you much more flexibility on that score. OTOH, C is also a much "looser" language (not just in memory handling), which means it's much easier to dig yourself a deep, dark, bug-filled hole in C than in Pascal. If you're a relative programming novice, starting with Pascal will let you write working programs with less pain and learn good programming techniques in the process; but if you've been programming for a while and understand the basics of things like functions, control loops, recursion, memory management, etc., C will give you more power. Another factor: There are programming trends and techniques that change over time. Pascal and C both predate some important modern programming techniques, such as object-oriented (OO) programming, so you won't learn OO programming with Pascal. Many modern languages, such as C++, are OO languages. (C++ is an extension of C, so if you learn C, learning C++ becomes easier.)

It seems that your point "without any limitation" doesn't reconcile with
your choice of KDX...

From their website:

Purchasing

Haxial KDX Client costs US$30. You can purchase it at the Haxial Online
Shop. Please download and try KDX before purchasing (yes, we allow this).

OK so the OS is faster but a modern PC is much faster then a Mac
Plus... I bet it could not play a 30 second MP3 file.

I'm running Windows 98SE on an AMD XP2600+ and it puts XP/Vista to shame.

"Load of rubbish, run Vista" they all say.

Comparatively speaking, today's computers are not hugely faster at all.
Almost all of the advancements are soaked up by a must-cater-for-all
bloatware O/S. In my mind; Windows98SE was the last one they got right.

None of this matters anyway as I code in RISC assembler for microcontrollers
with a whopping 128-bytes of RAM. They run off of a watch battery too.

The Atari ST today is still perfectly usable. If anything it's alot more stable. Like, how often does your ST crash randomly?

Yes at a slightly slower clock speed.

Downside of the Atari was the OS was written in C which slowed down execution a bit.

If you really want to get disappointed in modern MS OS, you can probably check out some Dr. Dobb's Journal from the late 80s. One column that was interesting was ~Inside Windows where they pointed out many flaws and unscrupulous behavior by MS.

The rumor was the programmers at MS had the saying "Windows isn't done until 123 won't run" in order to make excel the best selling spreadsheet. Likewise they were in a battle to dominate word processing software.

The net result was collusion between the OS and application programmers at MS that eventually got them in trouble with the FTC. The OS programmers would provide the application programmers with illegal jump/locations in the OS so the applications would win benchmark tests. If someone else used the illegal vectors, MS made sure the next version of the OS would break their application.

You ended up with a bloated OS that had to carry forward illegal vectors for their application compatibility and code to insure other applications didn't run. That's a lot to ask an OS so you can't really expect it to be fast or efficient too.

Hi Everyone.

I've moved the Falcon motherboard to a nice big tower case.

Everything is working fine but...I need some help on the Falcon
motherboard.

Would someone be so kind as to write a step-by-step document on how to
lead out all its connector, or point me to someone who could make the
necessary cables and connectors?

I would most definitely be will to pay for the cables and connectors as
my time is at a premium these days.

Thanks!

Here too. You should use the login link on the left side (in the menu), this
one works very well.

Not for me. I do get to a login page but whatever I type, the page
simply redraws and I'm back at retyping. I don't even know now if I'm
registered or not.

Cheers,
JFL

What I did is found a place for the motherboard at the back of the case. This way I only had to cut a hole on the case and use the original connectors of the motherboard. Very cheap and some connectors are hard to find.

In theory leading out a connector requires:
- find a connector that can be plugged to the motherboard connector and wires can be soldered to it (if the motherbord connector is MALE the find the FEMAIL pair of it and vica versa)
- find a connector that looks like exactly like the connector on the motherboard and wires can be soldered to it
- find a cable that has as many wires as many pins the connector has
- solder the two connectors to the cable: pin1 to pin1, pin2 to pint2 etc.
- use this method with all the connectors you want to lead out

Hi Rick!

Yeah really. Rembembering a desillusioned guy who tried to argument
with Lotus 123 in an AMIGA Shop.
PC was no thema at that time ;-)

hmmm, I am quite happy with NT...

MS can also stay conform to many things (e.g. Internet, Picture
formats, sound, video and other cross-platform thingies, IMHO).

Best regards,

Daniel Mandic

P.S.: Not again all that MS babbling (mainly ANTI, IMHO). Believe an
ol' AMIGA rant ;)!

Hello,

There is a nice article on the MyAtari website and it mentions some places to buy the cables. I am planning on doing the same thing with my Falcon. My I ask was it a chore to get the motherboard into the tower? I was going to put my Falcon in my old Hades tower, but I think I may have to use another. The power

supply looks like it will get in the way. Did you measure the dimensions of
the MB? If so, can I have them?

>Hi Everyone.
>
>I've moved the Falcon motherboard to a nice big tower case.
>

Hello,

I would say yes if you can find a wide SCSI to SCSI 1 adapter. I am sure they make them. I hooked up a SCSI 3 drive to my Atari using an adapter.

Hello,

That is one reason why I installed Linux also. I could not get the graphic environment to work, but that was using a Hades060 with an old kernel. I hope that I can get the Falcon version to work better.

I was under the impression NT was done by a different group at MS. It was meant to be server type<?> software so it didn't have the problems with having to make sure things like spread sheets wouldn't run.

I ran W2000 for years and only reason I stopped was HD crash. It is pretty good.
<snip>
> MS can also stay conform to many things (e.g. Internet, Picture
> formats, sound, video and other cross-platform thingies, IMHO).

IF you are really bored, take a look at QNX. Been a while since I last looked and I have heard one of the key programmers died.

For a while they had a down load of a 1.4 meg floppy image that would boot on a Intel platform and IIRC provice web browser and GUI.

Super stable, used in critical operations like oil wells. Small foot
print so it can be used in embedded systems.

I am a Digital Research fan too of course. I even used DR DOS 6 so I
could have an ST format GUI on my IBM compatible while waiting 15 years
for MS to come up with a stable OS.

I'm ok with XP but just the other day I used CCleaner on my S.O.'s
computer. It recovered something like 350 megs of disk space. When I ran
a registry cleaner on my computer it came up with ~900 bad entries.

This leads me to believe XP in reality isn't very good. It is just that
todays 10-100 giga byte drives hide just how bad it is.

Hi Rick!

Stolen?

No, joke aside :-), they paid for it. The prehistoric NT Kernel is still tough and newer NT's rely, AFAIK, on that old one, not really developed by MS itself.

> I am a Digital Research fan too of course. I even used DR DOS 6 so I could have an ST format GUI on my IBM compatible while waiting 15 years for MS to come up with a stable OS.

Yes, that's right. NT was with version 3 already a Hammer, but I can good remember the Hardware available at that times. My DOS have had 32MB (iDX4-100, Saturn-II PCI/ISA), which was far more than std. shop-PC's with 4MB and
Pentiums with Slooooow boards (Chipsets). ~93/93
But that 32MB costed ~1400bucks then, and NT3.x could just start/boot with 32MB ;-) etc. AMIGA OS3.x was still the better choice for me and my computing.

<=4MB Fast-RAM, and every communications is going well. DOS and Internet was no thematic for me, and Windows??... errrrrrrmmm.
:-) not till NT4 came out... (it's still dazzling. Well, the USB Mouse, now 15y too late is nice [NT<=5]. The AMIGA Mouse-cursor is still smoother ;-))

But I heard that Bill Gates was interested, long ago: "How's that Mouse cursor operating?" (when he saw the first window operated OS, I think it was a Apple!?). He never met the smoothness of AMIGA, or better said ATARI.
Apple is not in the slightest my case. I would rather fortify my next five years to learn Linux/unix, before I would use on a Mac. Brrrrr.

> I'm ok with XP but just the other day I used CCleaner on my S.O.'s computer. It recovered something like 350 megs of disk space. When I ran a registry cleaner on my computer it came up with ~900 bad entries.

Today it's easier with CPU's over 500MHz. Well...

> This leads me to believe XP in reality isn't very good. It is just that todays 10-100 giga byte drives hide just how bad it is.

XP=Experience ;-)

It looks too much candy at the first but can be configured nicely to lower NT outlook. I was almost satisfied with Nt4 for computing (Internet), but XP is much better and free of Military certifications :)

I can't say much bad, but I am wondering about the stability, indeed.

Kind regards,

Daniel Mandic

Hello all,

I registered yesterday late (10.00/11.00 pm), but didn't get
my password so far.
I just wonder if this site isn't just a fake, reproducing
actual pages just for grabbing personal e-mails...

J.-Luc

Edward,

What I did was remove my falcon's mb from it's original case, then trace around it on a poster board, then marked where all the screw holes of the mb were onto the poster board. I then cut out the poster board and voila!..I had a template of the falcon's mb which I then placed into my very big tower case. After fidgeting about, I was able to mark where the mb standoffs should be placed...mounted the mb...and that was it!

The difficult part...for me that is... are the lead outs of all the connectors.

Heck, I'm even nervous about soldering the 2 wires of the ctcm to the ct60!!!

I hope this helps!   My tower case stands just over 27" tall and 17" deep...and that's not including the wheels! :) :)

Hello again,

Just tried again :

- registering with same account and my e-mail, states the account
  is already used, and to try another with one,
- logging with the so-stated existing account, states that cookies
  must be enabled past this point - but they are on the windows
  machine I used for this purpose!
- going to the forums pages and asking a new password, states the
  e-mail adress can't be found - what did they smoke or drink ?
- going to the map module and creating my location, said I don't
  have authorization to access the module!

Really, what for a shambles is this ?????????????????????????

J.-Luc

I can't say exactly what is the problem with atari-users website but I
have a few thoughts here.

> - registering with same account and my e-mail, states the account
>   is already used, and to try another with one

I've often found that if an account is already created on a forum/
portal (even if not yet active!) it is (of course!) not possible to
create another one with the same email address. After all, the email
address is used as the identifying "handle", so to speak.

> - going to the forums pages and asking a new password, states the
>   e-mail adress can't be found - what did they smoke or drink ?

Appearantly the AUN server can't send back new passwords to a not yet
active account. I don't think the web servers drinking or smoking
habits is an issue here.

> - going to the map module and creating my location, said I don't
>   have authorization to access the module!

It seems like the map module requires users to log in to create their
map location. But if your account is not active, then you can't log
in. Quite logical, actually.

Obviously atari-users.net has a problem with the sign up process,
maybe something todo with the verification email not being sent from
the server. I am sure Rob will do what he can to sort this out though.

Regards,

/Joakim

WHAT?? I've had a few beers.. so forgive the rudeness.. are you an idiot???? WHY with all the ATARI sites I host would I be collecting 'personal e-mails' ????? Fake site???????

Just to point out .. this same server host Highwire, AtarICQ and the SpareMiNT (and CVS) sites. Not to mention the other Atari sites I host and run myself.

Yeah, I wasn't a big fan of the digitised screams on the Amiga version. Also the flight controls felt a little off somehow. Too colourful too. hehe.. I'd grown used to the stark colour of the c64 version. Sorry, haven't seen the Apple II version. For me it was definitely the c64 version that was best. I expect the Apple II version probably had a similarly good feel to the flight controls. (It did feel very sim-ish.) I would somehow seem right on a green phosphor screen too. (I'm very much a retrogamer at heart .. I like my Apple II games to be played on a green phosphor screen.)

It was one of those games I preferred having infinite missiles/bombs for. Too much to-and-fro-ing with the regular ordinance quota. The game was quite time consuming enough as it was. :)

I would agree too that the Apple II version of Choplifter was the best. Though I was over the moon to see it get the arcade treatment,

but they somehow lost some of the fun factor in that version. The c64
version was very good, but I think the Apple wins out because of the
analogue stick and two buttons - made the game much more playable.
Other than that the c64 and Apple versions play almost identically.
Nice raster-effect in the border of the c64 one too .. made the game
feel almost full-screen.

Nathan.

I remember reading somewhere that the game supported Mockingboard
sound, but the cracked version I have most certainly doesn't. Can
anyone confirm/deny that the original supported Mockingboard ?

Not on the Windows machine I used for this.
And, even on my FalCT60, I control each message marked as spam
before retrieving the mails.

Seems the bubbles of the beers are sparkling... ;-)
OK, what I exactly meant was : would it be possible that part of this
site would be hooked (is that the exact term?) by someone, who could
have used it for bad purpose ?
Well, I thing that "pirated" could be the correct term.
>
> Just to point out .. this same server host Highwire, AtarICQ and the

> and run myself.
>
And, of course, thinking the own maintainer of the site being the
author of the "piracy" is a non-sense.

Well, let's sum-up : I registered to this site, with my regular
e-mail adress, and got a message stating that I would receive my
password soon. That was two days ago.
As of today, I didn't receive any password - and, no, I don't use
any spam filter on the windows machine, and even on my FalCT60 I
check every mail checked as spam and uncheck it if necessary before
retrieving my mails -, and the account I created is not active
though acknowledged.
I think the correct term for this is "deadlock", isn't it ?
So, let's see what happens next.

Regards,

J.-Luc

Sounds like that is the root of all problems - the verification email
not getting through. I am sure Rob is already working this.

I just told the server to resend the account info. Let me know if you
see it or not. According to the mail logs.. it was sent.

Rob

Thanks, but that's not what I need.  I've already put my falcon in a
tall tower case.  I just need someone to write a step-by-step document
on how to lead out all its connector, or point me to someone who could
make the necessary cables and connectors.

I would most definitely be will to pay someone to make the cables and
connectors, provided the price is fair.

Erm, am I misunderstanding something here? Did you click all the links
on the top of the page? There Joakim describes how to make extensions
for cables etc.

The only cable extension it described, which I was interested in, was
the vga extension.

I also need that info, or the actual cables themselves, for all the
other ports except midi.
```

Thanks

Why not just make your own cables? The only one that will be tricky is the SCSI from what I recall of the Falcon. The D-subs can be done with IDC plugs and sockets and ribbon cable, and a vice to clamp the connectors up.

I actually re-housed my falcon in an ugly rack mount case, thinking im
gonna 'need' CD writer, large hard drive, big PSU, CT60 etc etc
etc....

Very soon it's all going back in the original case, I have the micro PSU, plenty of CF cards plus an IDE adapter, and so I can ditch the 3.5" HD and CD writer (used ONCE!). I think these days most people don't need to go full tower form factor, as everything you could need is so much smaller.

I just gotta buy HDDriver cos its the only thing that will work with CF cards. I think.

If I had the time, I would do it myself. However, I am extremely busy and have very little time...I haven't even had time to organize my home office in order to work on my falcon. That's why I'm particulary interested in someone to make the cables for me...for which I'd be willing to pay.

Thanks

```

Hi All,

I just got a Stacey 4 without a power supply and battery pack. The power supply is 18v 2a.

1) Does anyone have an idea where I can get the right adapter/charger? Radio Shack does not have one that syncs to 18V 2A.

2) I am unable to get power with other adapters. Is this okay?

3) Does the Stacey4 have a fuse somewhere?

The laptop is very clean and looks like it has not been tampered or opened.

Thanks.

Take my advice and don't touch it until you can devote time to do it
properly. It won't be a five-minute job anyway, and inevitably you will
have to bug fix afterwards.

I've got 2 cables that might help you.
They are both the same, about 13cm long, with a 9 pin D type plug one
end and black plastic socket (10 holes, 2 rows of 5) at the other, that
plugs into a cct board. If that doesn't make sense I'll upload a pic.
Cheers
Jammer

You can find "universal" powersupplies for laptops, like this one:

http://www.amazon.fr/Targus-Notebook-Adaptateur-secteur-externe/dp/B000JJGRCW

(some cheaper alternatives can be found, be sure to take one that claims to
be a switcing mode PSU)

>2) I am unable to get power with other adapters. Is this okay?

It all depends on those other adapters characteristics ...

You shouldn't need to have a 18V 2A replacement PSU. Another PSU with the
```

same voltage and superior intensity (more than 2 Amps) should do it.

>3) Does the Stacey4 have a fuse somewhere?

Anything not involving work would be a vacation. A few games of Mule, Blue Max, and Star Raiders would be a nice break.

Mike,

Sounds good to me! I'm running dual boot xp and linux on my x86 box,
and really am starting to like linux....just haven't settled on a distro

yet. I like PCLinixOS and Ubuntu. Would really like to see Mint get
heavily developed as linux does, along with synaptic type of way to
download software and....auto updates of system files as windows and
some linux distros do....ah....we can dream eh?

Another option that would require a lot less effort would be to use a PC
running Linux or Windows as a print server. The printer driver on the
Atari could print plain bitmaps to /dev/printer, the device driver will
then talk to the server on the PC which prints the bitmaps. NVDI is
already capable of "printing" to bitmap files, so you "only" need to
develop the server software.

Yes. Need UW-50 pin SCSI adapter. I use UW IBM drive in mega STE so.
Of course need ACSI-SCSI adapter too.

Hi,

You may have a look at this TV show of a meeting between
Steve Jobs and Bill Gates in the US California, 30th of May.

<http://d5.allthingsd.com/20070530/video-steve-jobs-and-bill-gates-prolog=
ue/>

This show is composed of 7 part videos, a prologue and a "best
of jokes".

They are both remembering good old days beginning from 1977, and
30 years of "cordial" collaboration. It looks like "the nerd and the
visionary". I won't tell you who is who in my thoughts ;-)

Anyway, the word "ATARI" is pronounced apart from Apple and MS.

It's been very instructive for my knowledge of IT history.

You might learn from it ?

Best ATARIan regards,

Yeah, that would work, too, although not the idea I was shooting for. I
was just trying to think/dream of possible alternatives should my
NVDI-compatible printers completely die and I can't get anything
compatible (that day is coming, you know, if not already here).
Personally, I don't cherish the idea of having to fire up all of my
computers just to print a document. I'd rather find some atari-based
solution. Also, what about those of us, like myself, who don't have
ethernet on their Atari's and have a Mac or other computer without a
parallel port? I don't want to buy a PC (spit, ptoi! Hate those dumb
things!) just to be able to print. If we could just buckle down and port
something or write something that could use already ported and free
drivers, I think it would be well worth it! Just my opinion.

Hi Michael and Nicole!

MANF>Also, what about those of us, like myself, who don't have ethernet
MANF>on their Atari's and have a Mac or other computer without a parallel
MANF>port?

You'd have to find a printer with parallel port still. While this is still possible (e.g. Brother Laser Printers), I'd rather use such printer over the network.

I've got a Falcon with Ethernet card, and a Brother MFC-7820N multi-function laser printer attached to the network. It's locatad in another room, so no way to use a parallel cable.

This printer knows both PostScript and PCL, and can be accessed using both Samba and the older lpr.

How do I print to that printer from my Atari running MagiC and MagiCNet? Or from MiNT+XaAES, for that matter?

MANF>If we could just buckle down and port something or write something
MANF>that could use already ported and free drivers, I think it would be
MANF>well worth it!

This should integrate seamlessly with NVDI, so one can simply print via GDOS and the system cares for the rest.

With best regards
Ekkehard

The web site is again online.... I just had to pay for a new year....

I will add some details about CTPCI next we.... and inform all users I
have in my CT mailing list.

Regards

Hi there, this is probably going to seem a little dumb but here goes.
I would like to put a small HD in my TT, but I am not sure where the
internal 50 pin SCSI connector is.There is a small card, which seems
to have two 50 pin connectors attached, and is perpendicular to the
motherboard.
Any help is appreciated.
PS. I intend to sell this TT at some point.
Mark

Well, don't bother posting I found the connector, right next to the floppy drive connector on the mother board, to the far right as you face the back of the machine. The other thing I was looking at was the VME connector for a graphics card I no longer have.
Thanks

Hi there, I have a Falcon with a Centurbo II fitted. It works pretty
well, but I can't seem to save the flash parameters. When I set it to
"external" hard disk driver and such things, it always reverts to
"Cecile" and other settings. Also I can't seem to save the NVRAM
settings, like for the desktop language for example. Is this a NVRAM
problem or something to do with the Centurbo, or both?
Mark

The VME connector is just under the floppy unit.

Guillaume.

It's NVRAM problem, read this:

[NEW] KEEPTIME v1.0 System patch when battery of your Real Time Clock is down.

Friday, December 1st 2006,

KEEPTIME v1.0 is a patch to disable a system time reset when the battery of your RTC is dead. This text has been written for the Atari Falcon. It may be applied to Falcon, TT and compatibles.

The Problems

"My Falcon losts the time and date when I switch off."
(15/31/07 0:00 for each boot)
"My Falcon boots in low resolution."
"My TOS is always in English and the keyboard is Qwerty."

The Explanation

Whenever you are shutting down your Falcon, the time,the date and NVRAM settings are saved into the RTC chip (Real Time Clock).
The Real Time Clock can also be named 'CMOS Clock' or 'CMOS Battery'.
The RTC contains a 128 bytes memory to save setup information.
The approximative life length of this chip is about 10-12 years because the RTC contains a built-in battery. The Falcon is not a very young machine, so the battery of your RTC is now dead !!

This chip soldered on the Falcon motherboard (U64) is a Dallas DS1287. It can be replaced by unsoldering with the same chip or equivalent (ST MK48T87B-24, MC146818A, MCCS146818BM) . The Dallas DS1287 is, in fact, a DS1285 which a lithium battery has been included in the same block. So you can also break the shell of the RTC to find the built-in battery.
Then, you must disconnect the circuit of the battery and redirect it to a new external battery added. You can find infos about this process on Atari forums on the web or inside ST Magazine.(issue 141)

Unfortunally, you don't want to open your Falcon and replace the RTC chip because you think you are not able to do this !

The Solution

First of all, a good solution is to launch the classic accessory Control Panel to set the time and date for each boot of the machine.

Yes, it's a safe solution but there is a problem !

If you are using TOS or MagiC operating systems, when you quit a program, a time and date reset occurs ! No problem, if you are using Mint OS.
I think it is a little bit irritating to work with that !

It is due to the specific XBIOS Function Gettime(). This same function can be found on TOS versions 3.xx (TT) and 4.xx (Falcon).

This function is called by the system when you return to desktop after closing an application.(I don't know why...)

The Gettime() function has a special behavior when it finds that the battery of the RTC is dead, this function simply resets the time and date!
The dead battery information is sent by the RTC itself.

KEEPTIME is a patch to disable in TOS the time reset by Gettime() function if the battery of your RTC is dead.

http://doyeuxyvan.free.fr/keeptime/v1.0/

You must run it in the AUTO folder.

Caution: To take effect, the TOS must be found in RAM !
Basically, the Falcon works with the TOS located in ROM.
Therefore, the TOS in ROM must be copied in RAM.

So you can use the excellent free tool by Uwe Seimet called ROMSPEED:
http://www.seimet.de/files/atari/romspd31.zip
http://doyeuxyvan.free.fr/keeptime/v1.0/romspd31/
You have just to run ROMSPEED.PRG in the AUTO folder before KEEPTIME.PRG.
In this case, you must know that the MMU is used by ROMSPEED to remap TOS in memory. KEEPTIME takes into account this functionality to locate the TOS.

Under MagiC operating system, the same function Gettime() as the TOS is present. However, you don't need to run ROMSPEED because MagiC is already loaded in RAM.

Copy in this order ROMSPEED.PRG and then KEEPTIME.PRG in your AUTO folder (Generally C:\AUTO). Be sure that your XCONTROL.ACC file is present in the root directory. (Or any kind of another tool to set time and date)

"Thanks, time and date reset has been disabled as long as my Falcon is powered on, but I'm still booting in low resolution with wrong keyboard configuration..."

Yes, it remains the NVRAM configuration problem.
You can find different tools to set up keyboard, TOS language, etc.
But you can only reboot your Falcon if you want that parameters take effect.

I have selected NVRam by Centek:

http://centek.free.fr/atari/softs/nvram.zip
http://doyeuxyvan.free.fr/keeptime/v1.0/nvram/
With this tool you can, of course, configure the NVRAM (into the RTC chip). In addition, you can write a bootable program on a floppy disk which writes your selected configuration into NVRAM chip for every Falcon boot.
Be sure that your floppy disk is present in the drive of course !

Follow this process to create a bootable floppy disk with NVRam:
- Run NVRAM.APP from the desktop.
- Set keyboard and TOS language, time format, boot resolution, ...
- Click on the floppy disk icon and insert a floppy disk in drive A.
- Click on the left icon (NVRAM -> Floppy Disk) in the new window opened. The program quickly writes the boot sector program on the disk with your NVRAM Settings.
- Then quit NVRam application. Your floppy disk is good.
(If you click on the NVRAM icon for quit, the settings are saved on NVRAM chip, but to take effect you must reboot. So, you can perform inifinte reboots with your good parameters until you switch off your Falcon.)

At each boot, NVRam bootable program looks for if it has been already installed in memory. In the case of NVRam already installed, the NVRAM config is not written.

So be careful when you have just switched off your Falcon, the memory and the RTC are not cleared instantly because it may remains residual current in the components. I advise to wait a long minute.

The End

Here is my summary procedure to work with a dead RTC battery:
- Switch on the Falcon with the correct floppy disk in drive.
- Very quickly, the floppy disk boot program will be read (You can read on the screen NVRam flag) and a system reset will occur.
- Now your Falcon boots with the correct NVRAM settings.
- After comes ROMSPEED and KEEPTIME loading.
- On the desktop, it remains to set the correct time and date in the Control Panel.
- That's all! Good Luck!

I agree. However some violence is justified, whatever the
weather... :/

Absolutely, "political correctness" advocates will be first against the
wall! :D

I just thought I'd let you know what I've been reading into the "Crusader" spam. I don't want to post this to usenet because somebody might try to tie that in to my posts in some way (someone already has, in uk.misc).

First of all, I'd like to ask you to believe that my phone line in my apartment is bugged, and has been for many months. I have moved a couple of times this year, but "they" have faithfully been on my trail.

Anyway, let's suppose my phone line is bugged. Now, when I talk to my internet service provider, it's over a SLIP (now PPP) connection. So if you wanted to bug what was said, either you'd listen in over the line and have to decode the transmission, or you could go to the service provider (more difficult) and ask them to decode a particular user's connection.

OK, so now they're listening to everything I do over my SLIP/PPP connection. A couple of months ago I was messing around with faking articles through nntp servers and through anonymous remailers. I chose a nice inconspicuous newsgroup for my little tests, something no-one would ever notice. Guess which newsgroup I chose??? Yes, _FISH_!!! or rec.aquaria to be precise

And guess what articles I tried to post? Goldfish, Koi carp and, you'll never guess... PIRANHA!!! The goldfish article and the Koi went through, but the piranha didn';t appear.

by now you probably think this is too silly for words. But if you look in the papers a few eeks ago you will find John Major, Tonny Blair and Paddy

Ashdown sharing a "private joke" about Major's sunburnt goldfish. We haven't had anything about Koi yet (they must be too dull). Now, sent by someone who clearly knew what they were doing (they chose an Italian backbone site for their launch point) we have many thousands of messages to people all over the globe. All about piranha, and with the punchline "that gives you something to think about, doesn't it?"

The way it works is that they're trying to kill two birds with one stone again. I don't knoiw why they should be against these national alliance people, but my interpretation is that they simultaneously try to discredit them, and stem the flow of Corley articles.

:People can always be called "MR X", to save them being named.
:
:I'm completely perplexed as to what you mean by b). Revealing identity?
:To who? And why would this be bad for any part of your life when you
:already have a less than respectful reputation here?

I'll just enumerate one or two things that I can still remember. Sometime around August/Sept 1992 I was living in a house in Oxford, and coming out of the house was physically attacked by someone - not punched, just grabbed by the coat, with some verbals thrown in for good measure. That was something the people at work shouldn't have known about... but soon after a couple of people were talking right in front of me about, "yeah, I heard he was attacked".

Again, one I went for a walk in some woods outside Oxford. The next day, at work, someone said "you know he went to the forest yesterday".

I don't want to put details on usenet of what happened because to do so would be to risk it happening again. If you put ideas in peoples' heads then you can find them reflecting back at you, and I don't want that. Also I can't remember that much from three years ago. From november 1992 I started taking "major tranquilizers" and just blotted the whole thing from my mind.

>This is a feature time and time again, that the security services
>(presumed) get at you by manipulating other people around you to get at
>you. If you have their contacts, manpower, resources and technology then
>you can do that sort of thing.

:But why? Are you a threat?

They pretend they "have" to get at me. After the first few weeks they had to find a reason to spy and abuse. You can't abuse someone unless they're in the wrong in some way. What I did "wrong" was to be ill. So it became "nutter" and "monster" and "he's going to attack us" coupled with "ha ha ha, he can't do anything to defend himself, it was so funny". That obvious contradiction within their propaganda is something they blithely ignore.

:So, the Security Services never *actually* appear, and you assume that
:they get someone else to do your dirty work. This is a bit of a big
:logical step, here: That person doesn't like me, or is causing me trouble,
:it's not because they've got problems themselves, it must be the "Security
:Services". Yes. Because people are infallible. Or is there more?

A single source is indicated because of the range of harassment. BBC + Capital + manipulated_public_at_large + set_up_situations, what does that add up to? Add in the technology to carry out the covert spying and the manpower and knowhow to follow you around for five years without being spotted. It smells very much of the security services, because there is no other organization (to my knowledge) which does the things I've seen these people do.

Remember, they have deliberately chosen the softest of soft targets to victimize. They purposely chose a mentally ill person who they thought would be likely to kill himself anyway, so that they could get away with murder.

And in all likelihood it will have started as a personal vendetta by someone. Who could that be? I don't know, but I can give you some clues.

The first possibility (deep breath) is that someone from my college set me up. Six years ago I graduated from university in the UK, during the last year there I was steadily getting more and more ill. I know that I was talking in my sleep; although I don't know what I was saying, it got me a reputation, and if someone from my college talked afterwards to the "wrong" people then that could be the reason for all that has followed.

I think that's the strongest contender for source. Directly beneath my room lived another bloke who frequently had his friends round late at night, after the time that I went to sleep. So they could have heard what I was saying in my sleep, and that could have got me the reputation for "talking to myself".

What I don't know is why that should have rebounded a year after I left.

You'd think it would have happened sooner; it's a bit odd to wait for a year and then start abuse. That leads me to question what in particular happened around May/June 1990 for them to start then.

>What I don't know is how it looks from the other side, from the side of
>the people who are being manipulated to get at me. On a couple of
>occasions I have challenged people to tell the truth of the matter, but
>they have alwats ducked the challenge.

:Have you ever considered the possibility, that you have made a mistake, and
:the people don't know what you are talking about?

Yes. I am currently considering the possibility that some people around me know only what is being posted on Usenet, and have not been "contacted" by "them". But I _know_ that others have been contacted.

:What words? Are they in common use? Could they be a catchphrase of a
:popular comedian?: "Nice to see you, to see you nice"?

In England the all-time No. 1 is "nutter". Easter this year, returning home from Clapham police station to report five years of harassment ("we're not saying it's happening and we're not saying it isn't happening"), another "not happening" incident of harassment when a cowardly little slut did her country proud by yelling "nutter, nutter, nutter" in the face of the hated enemy.

What can you do about that? You can't yell abuse back in their face, because they know they're supported by their peers, by the media, by the murderers in the security forces. You can't put them down when the fascist establishment is on their side. You can't hit them, because they would deny their abuse, they would deny knowing anything, and bring charges against the "nutter" who attacked them "at random".

>You know, you're
>passing saomeone, they're hardly going to construct an argument for your
>benefit, so they work a word of abuse into the conversation which they
>can giggle at.

:Abuse such as what? We're all adults here, we can take it. Is this abuse
:aimed at you? How can you tell it is?

I think I've said already what the words are. Thing is, at any given time the language is consistent. In January everyone's calling you X, then a few weeks later people stop calling you X and start calling you Y.

You can tell it's aimed at me, because when people repeatedly say the same words are you walk past, then laugh, you would have to be hard of understanding not to recognize it.

>Or they repeat something that's been said somewhere else... the PE thing
>being a case in point. PE says it, then other people pick up the refrain.

:Remind me who PE is again.

PE = "Private Eye"

>: >To give you an example, which I mentioned in another posting. In around
>: >October 1992, Private Eye ran a cover with the heading "Major's support
>: >lowest ever", with John calling to Norma on the cover "come back, Norma".
>: >Only one obvious interpretation to that, isn';;t there? I certainly
>: >thought so when I saw that cover. Wrongo!! Down the pub with people from work
>: >Simon says to phil, "don';t you think it's wrong then?" phil says, "well
>: >private eye are usuallyright"..."hislop strikes again..
>
>: Erm. Mike? Heeeellllllooo? What are you on about. What is the other
>: interpretation then? Norma having an affair? Seems a bit wrong, with the
>: heading "Majors support Lowest ever"...
>
>No, this one isn't obvious , it really does need to be explained. I
>certainly didn't understand it when I first saw it. You see, the kernel
>of vitriol is in the words "come back". At the time, the themes of
>abuse were centred around interpretations of those two words (stretch your
>mind a little bit, I don't have to spell it out for you, surely).

:You did in your mail item.
:
:You seem to be scouting about something called a "Double Entendre". The
:inference being "Come" = Ejaculation, "Back" = Anus (not the first part
:of the body I would have went for, I would have foolishly gone for "Back",
:silly old me).
:
:You see to have picked a sodomy double entendre out of a Private Eye
:headline. They are everywhere. The English language has much double
:meaning in it, and if you put your mind to it, you could pull a double
:entendre out of a randomly chosen page of the bible. So what?

>The point is that when Simon pointed it out to Phil, he did recognise
>what it meant after a moment's thought... and so did I... and so did the
>people who repeated it several times later... so however murky it may
>seem to you, that is the meaning they intended it to have...

I still don't really know if the meaning was intended when that headline was written, or if it was simply "found" after the fact. The reason I think it might be the former is that I got quite a lot of abuse along the lines of "sound-alike" or "double-entendre" at work, in particularly from Steve. So "double" inevitably came to mean split-personality, "two people in one"; "back" inevitably came to mean "backside", "come" inevitably meant you-know-what, "split" (well, we'd better split now) again you can guess, "bent" (of a similar bent), the list goes on forever. These aren't "nice" double-entendres intended for comedy, they're nasty words to humiliate and cause pain. If I could turn the clock back three years then I would sue my former employers for harassment and I would almost certainly win. I had to take pills after a year of Oxford, so they wouldn't be able to lie their way out of it. Actually, I could still take them to court - the main obstacle being that three years after the fact is a bit late and much of what happened, the details that would be necessary for a case to go to court, has just been obliterated by time.

says:

>Indeed, I feel that my Usenet access is censored simply because I don't want
>to download groups he is partaking in, because of his behaviour.
>
>I wasn't that bothered, but I am starting to get seriously pissed off
>with him. Which takes a lot.

Hi Snail

This person Corley seems quite interesting for three reasons. I put the following at the end of a post in another thread just to see if he was reading any other threads in uk.media.

It seems he is probably not.

Heres an interesting little story from back in the early days of CCD technology. There was this miniature camera which was designed to fit behind the infrared receiver lens of the remote control system (just beside the IR sensor itself) the camera clocked out the data in 256 lines of 256 pixels from a Fairchild chip and fed it out, a line at a time, into the VBI within the TV set itself. The signal could be picked up remotely from a standard license detector van from where it was stripped out of the surrounding RF signal and relayed back to the TV station where it was displayed as a slowscan monochrome image in a corner of the news readers monitor.

This is the first I'm an hearing about this. Can you guys give me more
details?

Is it after you log on with the new account?

Rob

Sure, I'm using Fedora Core 6 and Firefox 2.0.0.4.

> Is it after you log on with the new account?
Direct after editing the username, the e-mail address and pressing the "new
user" button.

bye
Bernd

Check out this link, comparing a Mac plus to a modern computer. Did
the Mac Plus use the same CPU as the Atari?
http://hubpages.com/hub/_86_Mac_Plus_Vs_07_AMD_DualCore_You_Wont_Believe_Who_Wins

Thanks.
Hope you have download it before Lycos/multimania crashed my website.
Cannot access to my ftp account, and the lycos tells it cannot find
the index.html and others files...

I'll try to find a solution or wait for the situation become less weirdo

Tchuss

It's a Hades060, latest revisions of XaAES/FreeMiNT, Thing (latest official version, not the beta), NVDI5.x.

> > parhaps passing a bad pointer or something?
> Is a bad pointer which is send by the AV protocol.

Yeah, that's my impression too.

I've also noticed that it doesn't find the AV server when double-clicking on files in the "list of found files"-list, so it could be something in the AV-related code. I've downloaded the sources and browsed them briefly, but I'm using GCC myself so I can't really do something unless I translate the source first.

regards

It works!! :) And this version seems to select some nicer fonts by
default as well.

Thanks Gerhard!

Bonsoir :)

Upgrade of my new FTP client, download on my website (has changed location).
```

or directly with http://ptonthat.club.fr/files/litchib2_uk.zip (90B).

Carefull, I do not know if Club Internet likes direct download. It do not permit to display the directory file list.

New snapshot: http://ptonthat.club.fr/images/snapshots/litchi_snap.png

New features in this release:
- fixed a bug in the 'sort by name' (that may cause a crash)
+ sort by type, distinguish case or not for sorting (Thanks _Dbug_)
+ some keyboard shortcuts
+ local files browser (convenient for monoTOS, Thanks Cooper for the idea)
+ Tidy windows
+ Download behaviors for each URL:
  . point to download folder when opening connection
  . verify free disk space before saving downloaded file
    (careful, verifying slows the process)
  . convert filenames to DOS 8+3 names (always done if not MagiC or MiNT)

In short words: adaptations for good old TOS.

Next release not next week, nor month, maybe in two months...
I would like to read Plato in the parc and appreciate the shiny sun.

Voil� !

Hello All,

I am back, but without my Hades. It is gone, at least that is what Fredi says. I now have a Falcon030 and am waiting for the CT60 with PCI upgrade from Czuba tech. I plan to put the Falcon motherboard in my old Hades case, so if there are any tips, I would like to hear them.

Until the CT60 comes, can anyone tell me why sometimes I have keep reseting the correct time and date on the Falcon when I quit a program. Other times I do not have to worry about like now. I even had to turn off the Falcon and it came back with the correct time and date?

It sounds like the onboard battery is going south, if not for turning it
off/on and it coming back with the correct date/time. Mine acted just like
yours, except for that.

I had Alex Yu at ATY Computers replace mine, with a socket, so I can
change it out in the future (of course I'll be using my Falcon 5-10 years
from now!). :)

Hello,

I can't remember the value of the fuse that protects the cartridge port
of the Falcon. I tried to read it on the one that is on my own, but I
can't believe 5A to be the correct value - I must have misread, don't I?
Someone here knows the type (F or T) and value ?
Thanks,

```

Hi.

Quick question - I'm selling my Atari kit in the UK and wondered if
advertising the ebay link was within policy for this group. Some groups
like it, some groups don't and I don't want to annoy people.

Opinions? If no-one objects after a day or so, I'll post the link up.

Cheers,
Ian

I just looked at the schematics, and it just says Fuse F2. There is
other writing near the fuse symbol but I can't make it out as my copy
is incredibly bad. I thought it was supposed to be 0.5A.

I just checked the MegaSTe schematics, and indeed that one is written
as 0.5A.

imho, atari parts are rare enough to justify an ebay link. But the auction should preserve the spirit of this group: high prices just to "make money" should be avoided.

and the seller should keep in mind that he talks to a lot of specialists when writing the description... no lies!

Guillaume.

Fully understood - I'm confident I don't fit into the "high prices just
'coz" category.

>   and the seller should keep in mind that he talks to a lot of specialists

(God,

those ebay links are horrendous aren't they?)

Full system - highlights are STe, SM124 monitor, hard drive (40Mb'ish -
don't actually know unformatted, but that's what the partitioned space
added up to), Connect IT/Genius LAN ethernet adapter and Spectre GCR.

Would like it to go to good home so thought it worth posting here.

(though that's -not- an invite for buy it now, to be honest I have no
idea how much this bundle might go for so I'm happy to just let the
auction sort it out).

Cheers,
Ian

Thought about that, but I tend not to like the fact you can't see where
you're going, particularly relevant on Usenet in a group where I don't
have much history (I -have- posted here before but not for years and
never that regularly I'm afraid).

Cheers,
Ian

That never crossed my mind, I see your point. However, it's a commonly accepted way to post a long link on a group, especially in news feeds, because some news readers will never allow you to select a complete URL thats split over two lines. It's worse when the original message becomes quoted.

Anyway - here it is in tinyurl form. http://tinyurl.com/yqgm2v

Just post the eBay item number, a note that it's on eBay (of course),
and the country where the item is located.

```

I've been wracking my brains to remember this. When I had an Atari STFM, I had a hardware 286 emulator fitted inside it - 7.1Mhz I think, they later upgraded to 16Mhz. The resulting emulation was pretty good, though screen display was a bit slow. It was certainly good enough to get me through my 'A' levels (mostly Turbo Pascal) and the start of university too. Actually the ST made a superb machine for its time, since I could run it natively or emulate the PC and Mac as required.

Can anyone remember the name of it? It wasn't PC Ditto - that was software-only from memory. It was something else.

Cheers,
Ian

Wasn't PC-speed the XT version i.e. 8086 emulation?

I think AT Speed was the 286 version.

Also i think PC-ditto 2, hardware based this time was a 286 emulator.

Many depends from version of Mega STE. Earlier ones have TOS 2.05,
which has no HD floppy support.
There are some micro switches too, (see schenmatic) which must be set
for HD activation.

In any case upgrade to TOS 2.06 is worth, since 2.05 has too much bugs.

That's it - AT Speed. Excellent device, helped me through A levels (UK exams taken at 18 pre-university) whilst writing Turbo Pascal programs.

Thanks for that.

Cheers,
Ian

All but positive Ditto2 was an 8086 emulator. Gave up on it when realized it's color capabilities were CGA only. Still have it here somewhere. Never got along well with DOS3.3. Got somewhat competent with DOS5 after learning to type but by then had an AdSpeed and TEC Card on the CPU. Too bad they didn't get the Megabus connection finished.

At least I got to see it work. From what I understand most didn't. Even tried Windows V.2 on it. Obviously Windows V.2 was a loser on any computer but was unusable on this.

There is a little bit more than that. Ugrading my Mega STe required
changing a GAL, and adding a jumper on the bottom of the mother board.

B&C ComputerVisions, myatari2@juno.com, was most helpful with that
project.

Jim

Hi there!

I just installed Linux for the first time on one of my computers, and was struck by the fact that while our Atari's are struggling with using a very expensive program (NVDI) with way outdated drivers, Linux has really well done printer drivers available for it - for free and open source! I investigated a little, and got to thinking, why don't we have Foomatic, CUPS (Common Unix Printing System), and Gutenprint ported to Mint yet? Yeah, I'm sure the memory needs on them is a bit big for many Atari's, but then again, how many people with a complete Mint setup are running it on an ST? I would think most are using a TT, Hades, Milan, Afterburner, CT60, or Aranym for that task. From what I've read of them, they should be easily portable to any Unix system. I would think Mint falls under that category.

Does anyone know if it would be possible to incorporate CUPS and Gutenprint either into fVDI (if we want an NVDI-type configuration again) or into a stand-alone program (probably preferred)? If it were possible to accomplish, it would add greatly to the goal of having a completely free OS on the Atari, since that's one of the few common OS elements that's not currently free in any modern, usable fashion.

Just a thought. Comments?

Mike Freeman

Stick it on a picture web site. SIL resistors usually have a dot or bar by
the common pin. When using as terminators there is a matching dot on the PCB
, or on some of the older drives the socket had a square surround,

Ok thanks David, here (I hope) is the photo of the motherboard on Yahoo photos.

http://photos.yahoo.com/davidmgray_de

There should be an album called TT,

Do I pull both out of the board. It looks as if they are soldered but I've not looked at the other side of the board. Basically I need some advice on what is involved.

Dave

yeah, I was reading that the GBC rendition wasn't as good as the older
computer versions.

KNI Studio wrote:

> Ok, what is Wavelib ?

Hi!

A perfomances-librarian for the KORG Wavestation (various models),
which runs on ST.

I have found some Banks on Internet, mainly demos by known Wavestation
artists and sound creator.
Inside the demo-archives are "*.syx; *.mid; and *.lib files".

I just wanted some suggestions for nice *.syx Loader. I have already
found some.... they work and do not crash the Keyboard like PC
programs. (Resetting the Keyboard is hard work....)

Suggestions for other NICE *.syx loader still awaited! Or a better
method...? I have no idea.

Best regards,

Daniel Mandic

The SIL resistors will be pushed into SIL sockets, which *are* attached
to the motherboard. The sockets are black plastic, maybe 1/8" high &
1/8" wide. You should be able to pull the resistors out of the sockets
with your fingertips, you don't need pliers :-). Pull straight up to
avoid bending the pins if possible (but they're very forgiving, you can
almost always straighten the pins out afterwards with no problems).

If you ever need to re-insert them, there *is* a right & wrong way to
connect them, so make sure you make a note when you remove them as to
how they're marked (as noted above, there's usually a dot at the end
which is pin 1, and the motherboard will be silk-screened in some
fashion to indicate where pin 1 goes).

BTW, I'm a little puzzled that you can only see two terminating
resistors. Usually there are three, each with 8 pins. On the
motherboards that I'm familiar with, two are side by side and the third
is slightly offset, a short distance away. IIRC, the three resistor
sockets are silk-screened as RPA01, RPA02 & RPA03.

A last reminder: make sure your system is powered off and the power plug
is disconnected from the wall before doing *anything* inside your TT!

Good luck,
Roger

    I don't want to sound biased, but overall I found the original
8-bit Apple II version had the most pleasing game play.

    The Amiga and a recent PC remake (from Byte The Bullet)
```

were visually more colorful and graphically appealing, but from what I recall the animation was awful. Almost in a comical way, it reminded me of an animated Monty Phonty short, the way the plane glides, turns and scrolls! The looped digitized clips were less than stellar too. The Apple II one had a very realistic flight-sim feel to it, combined with video game style action, despite its MUCH more limited graphics and audio.

What is interesting is Broderbund had a 16-bit Apple IIGS version being worked on by Matt Crysdale and Robin Kar (programmer/artist dual behind PBI's Alien Mind) but it was never released. Would've loved to have seen this.

Definitely one of my all time favorite games, I'll still pull it out from time to time and play it on a real Apple II. :) Still remember the cheat I discovered 20 years ago in the Apple II version that allows you infinite lives. I think my walk-thru is still floating around.

What cheat was that? My brother and I discovered how you could get 30 bombs, rockets or torpedos - made missions so much quicker ;) You'd highlight 'bombs' and then hit the up or down arrow key just when you hit the button on your joystick to choose that weapon. If you got the timing right, you'd end up with 30 rockets or torpedos. This also worked in reverse as well, so you could get only 1 rocket or 1 bomb, if you liked. ;) Just for fun, my brother did a whole mission with just 1 rocket at a time...took him a couple of hours. Another time, he did a mission with just rockets - even to take out the little soldiers running from the barracks or machine gun nests. He got quite good at sniping them from high altitudes.

hey thanks for that info Mitchell.

sounds to me that it's a similar story to Choplifter. Many, including the guy who wrote that game, Dan Gorlin, feel the Apple II version played the best. The Sega 8-bit arcade version had by far the nicest graphics, and this version was translated down to the Master System.

I too would have loved to have seen & played Wings of Fury on the 16-bit Apple IIGS. What a treat that would've been.

Like Rescue Raiders. If Wings of Fury is already redeveloped using modern technology like 3-D graphic this century, it would be horrible slow because of too much memory and depend on CPU / GPU speed heavily. I wish that this century can reuse last century technology to continue using 8-bit games this century!

Yes those look like the terminators, or are there other SILs in the TT?
Trouble is there are a few different TT board layouts....

.. Let me look in mine and check...

On checking the schematic these are I think RAM pull ups. Looking closely at the photo it looks like the internal terminators have already been removed. The terminators on mine are right behind the external SCSI socket, which is of course where they should be. They fit into what looks at first like a 3 hole x 9 hole grid of sockets, but which is actually 3 x 9 hole sockets. In the photo you can just see the empty sockets between the external SCSI port and the square chip near the internal SCSI port. In this TT they are as Roger says slightly offset.

Of course this means that if you use the machine without any external SCSI
you should pulg a terminator into the external SCSI port....

Hi,

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometime dated information. Part of those bookmarks persist since the creation of the WEB page, 10 years ago.

The interest with these numerous bookmarks, there's 552, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It has become quite consistent now.

This is a first experience in the direction of WEB 2.0, because even if I'm responsible of its creation, *ATARI Search Engine* can possibly be extended by everybody connecting at

<http://www.google.com/coop/cse?cx=3D014753128619202207476%3Atzogojpdahi>=

Have a good ATARI WEB Surfing :-)

You see this is the sort of thing I'd have liked to have seen in Fire and
Ice - its obviously very good, but its just a bit too cute for my taste.
:)

                  All the best,

Due to its flexibility, SuJi has long been the favourite file finder on the Atari range of computers running TOS, MagiC or MiNT. It will search for files matching an entered name or partial name (very extensive wild-cards can be used for search-masks); alternatively the contents of a directory, partition or whole disk can be listed. The results are displayed in a list which can be sorted in ascending or descending order on any of the columns (name, size, date, time, program flags, path of origin). If your desktop supports AV-Server, double-clicking an entry in the list will either launch the application if it is an executable file, or display the contents on the screen.

Now the original author, Daniel H�pfl, has released the sources, and Gerhard Stoll has used these to produce an improved version 1.36 that has three useful new features: Using Alt-O when the list is open brings up a dialog in which you can decide which columns are to be displayed (not many people will need to see the file time-stamp or the program flags, say), so making more room for long path-names to stay visible without scrolling the list window. In the same dialog you can also select which columns of selected entries (or the whole list) are to be written to the clipboard when you use Control-C; you can then paste this to a text editor for further processing. The third improvement is that both these options as well as the size and position of the list window are saved when the program is quit, so will come up the same way the next time you use SuJi.

SuJi remains freeware, is available in German, English or French, and may be downloaded from Gerhard's web page:
http://home.ewr-online.de/~gstoll/

This has been a public service announcement from Peter West (who produced and updated the English ST-Guide hypertext for it).

Hi Roger & David,

Thanks for your responses.

When I bought this TT it had an internal drive connected which worked fine for a while. It plugged in ZIP drive and started having problems with both the ZIP and also the HD.

Came back to the TT a few months later and the HD was not working at all. I assumed it was duff and removed it hoping just to use the ZIP as the HD. Now none of it works :o(

Right so if I'm understanding correctly this machine is "ready" as it is for an external drive because the SIL resistors have been removed. And if I get some resitors and plug them back in I could potentially use both a ZIP and an internal HD.

Will any SCSI terminator do if it has the correct number/size pins?

Do TTs take IDE drives? I had another look at the HD I pulled and it could be an IDE, there's no marking to either SCSI or IDE.

Cheers
Dave

Lets start with a quick note on SCSI. Both the ends of a scsi cable "SHOULD" be terminated. This can be done by terminating resistors on the last device, or by a seperate terminator like this:-

http://www.worldofcables.com/oscatalog/CreateHTMLPagesItem/SCS-4910.htm
(fits on the external socket)

or like this

http://item.express.ebay.com/_W0QQitemZ120044580765QQcmdZExpressItem
(fits on the last socket on the cable)

Note that the TT SCSI controller sits between the internal hard drive and the external connector. In a "basic" TT the internal drive provides the termination at one end, and the "on board" terminating resistors provide the termination at the other end.

> When I bought this TT it had an internal drive connected which worked
> fine for a while.

It "shouldn't" have worked with just an internal drive and without the terminating resistors in place, or having an external container. However the internal lead is very short and provided the internal drive had its terminator resistors in place (generally older drives had these) or termination enabled (later drives often have one link that enables the terminator resistors) it would probably have worked.

> It plugged in ZIP drive and started having problems
> with both the ZIP and also the HD.
>

When you add the ZIP drive the cable length is probably long enough for the electrical reflections caused by no termination to have an effect..Does the zip have an "enable termination" link or resistor packs. Or was there some kind of external terminator.

> Came back to the TT a few months later and the HD was not working at
> all. I assumed it was duff and removed it hoping just to use the ZIP
> as the HD. Now none of it works :o(
>

Sounds about right if the ZIP has no terminators.

> Right so if I'm understanding correctly this machine is "ready" as it
> is for an external drive because the SIL resistors have been removed.

It expects an external drive and an internal drive. The external drive need to be terminated in this configuration.

> And if I get some resitors and plug them back in I could potentially
> use both a ZIP and an internal HD.

If you plug in terminators you should only use an internal drive.

>
> Will any SCSI terminator do if it has the correct number/size pins?

>

Some are designed for "differential". You need single ended.

> Do TTs take IDE drives? I had another look at the HD I pulled and it
> could be an IDE, there's no marking to either SCSI or IDE.

No, only Falcons take IDE (or othrs with IDE adaptor). If the drive has a
50pin or 68 pin connector its SCSI. If its 40 pin its IDE. Of course just to
muddy the waters there are devices like this:-

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=320113515428

First, apologies for being late this month, many, many
many things going on. An Atari SysOp is never bored. :)

Second, we've reached another milestone (of sorts) here, at The DarkForce! BBS. We just recently added our 500th user!

Because of that, I had to expand our user database. Some functions, such as MassMail will have some unintended consequences because of this. Current users will have multiple old MassMail entries waiting for them. Simply hit any key to go through them all. Everything should be returned to normal on your next call. Thanks for your patience and understanding in this matter.

So...here is to another 15 years and 500 more users! :)

Our monthly winner of the 3 magazine subscription to
ST Magazine is:

Orion_

Congratulations, and remember, you can't win if you don't call each month! :D

Ok thanks for that. SCSI really does seemed to have changed quite a
bit over the years.

>Note that the TT SCSI controller sits between the internal hard drive and
>the external connector. In a "basic" TT the internal drive provides the
>termination at one end, and the "on board" terminating resistors provide the

Right got it, I think :o) Any idea where I can get some of these
terminating SIL resistors? Are the ones used in the TT still in
production?

>

I'm looking at the external drive now, it has what look like SIL

resitors near the SCSI port. They even look like they might pull out.
Going to leave this drive as it is because it has a load of registered
Atari software on it. I've put the pics on Yahoo photos again...

Yes the ZIP drive (and I tried two) has a switch to turn on/off. I
had it swet to On.

Ok best left alone then. The reason I favour using a ZIP drive as the
HD is because I'm going to have a blast at using MiNT when I have a
moment. Watch this space :-)

It's currently booting from an external ACSI Gastiener Mega Drive.
This thing is like a telephone book and sports a gargantuan 96mb...
Work though.

Sorry I should say BUS rather than cable. So on a TT with internal and
external drives you should have

terminator <=> Internal Drive <=> scsi controller <=> External Drive <=>
terminator

And of course the terminators may be inside the drives.

I don't think so. The rules have been the same as long as I remeber.

To be honest I don't know what resistance they are, but I am sure compatible
ones are available.

Those are terminators. Leave them in if the drive is on the end of the
bus/chain.
If its in thye middle you must remove them. Why not pop this drive inside
the TT?

It should be OFF unless the drive is at the end of the physical chain.
Did you have both the ZIP and the Hard drive external and no internal?

One other important note. When the TT boots its the device ID that
determines which device it boots from not the
position of the device in the chain. Each device must have a separate ID. If
you want to boot from a ZIP drive I think it needs to be ID0...

It can also have another ID, provided that there is no *bootable* device
with a lower ID. The Atari boots from the first device with a bootable
root sector, which is usually the device on which the hard disk driver
was installed.

Hi,

<http://www.atari.org/> domain looks to be down to me.
Is there an explanation ? What happens ?

Best regards,

FamilyNet International Newsgate

You know I think what did it for me was Star Raiders. They had that phrase where it mentions "186,000 miles per second for the speed of light. It's not a suggestionit's the law"

And so I've tried to hit light speed driving a car as often as possible. Hey it's the law right? >:)

Bonsoir :)

Litchi is a next generation FTP client. Download on my website (after
the Troll) or directly in the folder http://rajah.atari.org/files/
-> litchib1_uk.zip (90KB)

Snapshot: http://rajah.atari.org/images/snapshots/litchi_snap.png

Still in development, but it's already usable (its archives were
uploaded with it). At the moment, the program is adapted to MagiC (and
MiNT ?). Working for old TOS is planned (8+3 names and intergrated local
files browser). Recusivity (folders and their contents) is also planned.

Hope you'll enjoy. Please read the ST-Guide doc for more informations.

Voil� !

While watching the video and seeing the "grandpas" in it, my thoughts was then: "damn, we are old!" I got my first ST at Christmas back in 1986 or 1987 . And i still have it, use it (sometimes, i use more the Falcon or Aranym) and love it. Since when do you use a computer? I mean, can you imagine the time between then and now? We grew up, we are married, have some children now ...

We got old!!! :o(

bye
Bernd

Okay guys... as some of you may already know... Telnet is down. It
should be back up in a couple of days. But in the meantime... the java
applet is still available at www.newnet.net... although, some people
seem to be having problems with it. The best bet is use an IRC client.
I did discover a problem. Most of the servers won't let you in unless
you use port number 6667. So... if you are having problems connecting
to a NewNet server here is my suggestion. Type /server servername:6667
(ie: /server irc.eyearesee.org:6667)

Here is a list of the servers on New Net

irc.tobug.net
irc.Sith-Net.com
irc.rejectauthority.com
irc.redwolfs.net
irc.ircsoulz.org
irc.frog-face.com
irc.eyearesee.org
irc.spasticsystems.co.uk
irc.flatlined.net
irc.indianskickass.info

<http://www.atari.org/> and <http://www.dhs.nu/> are both down. There
must be a link between the fact that those domains can't be reached.
Because Anders Eriksson maintains both these WEB sites.

Somebody can tell us what's happening ?

ATARIstically yours,

Hello,

I'm looking for the schematics of the hardware that went with
Blitzcopy, that used to allow to copy some uncopiable software.
Anyone knows where I can find this ?

Regards,

Jean-Luc

  ^^^^^^^^^
Sorry, it's Blitz Turbo. I own the original software floppy, but can't
find the HW anymore. :-(

Hello,

What's happening to Atari-related sites ? They all seem to �vanish� one
after another :-(
To the three Francois listed, one must add martin's, that is
unreachable since friday at least :-(
What's this ? A new kind of flu that targets Atari-related sites ? :-(

GFA program, it's said in the RTFM that this release is not compatible with MiNT memory protection: you should get the GFA source and compile it with a GFA library MiNT MP compliant, such as LicomLIB.

I should have compiled with this LicomLIB, but it has drawback i hate: the lib fragments memory with a remnant of small bytes when program exits. In multitasking, that's not really a backdraw, but it's really annoying under monoTOS, where you get less and less available RAM when you launch programs compiled with this lib.

Also, someone has reported a bug under MiNT (that is less visible under my MagiC system), "string too long" alert and quit. Maybe it's the big bug I have discovered in the 'sort by name' function.

I have implemented the local file browser window, so I plan to release the 'beta 2' this week-end. This is really convenient under monoTOS.

Voil�.

Ah. I read the manual, but only the "installation and required things"-section..

Thanks for releasing the source code! Good move! I'm a C-programmer myself, but I'll set up LP:s GFA environment and see if I can get it up and running.

regards

Great utility! Really usefull when looking for dependencies etc. while coding.

However - it seems to have some minor issues related to memory protection. Thing gets killed as soon as I launch SuJi... parhaps passing a bad pointer or something?

Indeed it seems to be unreachable again. AFAIK, it's a DNS problem. I'll tale contact with the owner of the server asap.

CU,
Martin

I actually managed to get ahold of more machines than I "need", so I now
have a Mega2 ST (NTSC) + keyboard in excellent condition that I would like
to offer for sale. If anyone has an interest, please reverse each segment
of my email address and drop me a line.

Thanks

Ok thanks, that explains a problem I had at the end of last year with
this TT.

Can anyone point me in the right direction for a TT motherboard diagram and/or instructions on how to set this jumper? Is it easy to get at? The reason I ask is that I usually kill electronics I take to bits :o(

Wednesday, May 2nd 2007,

CDLab 0.91 is available.
http://doyeuxyvan.free.fr/cdlab/v0.91/CDLAB091.ZIP
A CD-R burning tool for Atari-compatible computers.

New features

- New audio formats for audio extraction. (AU/SND, AIFF, AIFF Cubase Audio).
- Filenames mask for audio extraction.
- Interface improvement in Monochrome.

Main features

- Audio track extraction.
- CD-RW blanking function.
- DAO (Disc-At-Once) copy for any single-session discs. (But it doesn't work with my MMC compliant drive)
- TAO (Track-At-Once) multisession mode.

You need the SCSIDRV interface. (already included in HDDriver)
You can also run this program before CDLab.
http://doyeuxyvan.free.fr/scsidrv/SCSIDRV.PRG

CDLab is now released under terms of the GNU General Public License.
The source code can be retrieved here:
http://doyeuxyvan.free.fr/cdlab/v0.91/

Original Francois GALEA website:
http://fgalea.free.fr/cdlab/

They are  "SIL" resistors, not jumpers, and access is via the hard drive
cover. On mine I think there were three like the ones in the picture here:-

http://fabian.com.mt/RESISTORSdilSil.htm

Just remove from the mother board....

Hi!
```

Wavelib is working great. Sending receiving, no problems. No need to dismantle the Wavestation and find the tiny reset button (crashing regularly with a PC library program, do not remember the brand), not to mention the not-need of a second MIDI synth looped in, so that the crappy SB Gameport-MIDI finds the MIDI-IN of that specific Wavetable Synth ;-)
(might be a problem of an old ROM version... who cares, the ATARI MIDI Port can.). By the way, Cache of the 030 (TT030) is to be turned off, for proper MIDI flow control :)

Well, but how can I load .syx files with Wavelib, or .mid and .lib, found on Internet... ?
Do I need an other program?

Maybe something with menus, like Wavelib, please! Freeware if possible.

Best regards,

Daniel Mandic

The ATARI ST was a computer known for brutal, violent and
exceptionally gory games. Kids and young adults who used
to play these games turned into spree killers, rapists,
satanists, serial killers,terrorists and cannibals.

This is true. Many murders are committed by ATARI users,
this group is probably full of future mass murderers and
serial killers!!!

ST = deadliest computer ever!!!

Try to find someone who has never played any Atari game in his whole life...

Guillaume.

Hey Rusty, thanks for the Falconspeed software. I replaced the Dallas chip and dropped the card in, works ok. BUT;-) My manual is in German, and makes very little sense. I was wondering if a English copy existed in electronic form somewhere. I can't even get the floppy drive to kick over under emulation. Nice touch with the reset tho.

Cheers

Mark

ROTFL. Getting excited, just dropped a few of the DBUG falcon hdd
install games on the old bird. Damocles, Magic Pockets and Stunt car
racer on a Falcon....woooohoooo. Kicks PC off end of bench.......

I fell in love with Falcon's the first time I saw one. Lovely piece of
kit. This one has a 3gig hdd (might drop in a 20gig), 14meg chromagic
simm card, Falconspeed (of course;-) a new Dallas clock, a Piezo speaker
(original and chromagic card won't fit) and TOS 4.01:-p. I don't suppose
you know where I can get a Tos eeprom reprogrammed?

Mark

Hi Gang,

I just re-installed GForge Active Server on the AtariForge.org server. I don't have the time needed to test everything out, mainly the cvs access. If anyone can help, please post a message on the Support Forum on atariforge.org

THANKS!!!!!!!!

RobM

Hey everyone!!! We still have the IRC chat night going on each week, on Thursdays, if anyone wants to come in and check it out. Official gathering time is 8:00pm CST/CDT, and you have 3 options for getting in:

- Use your favorite IRC client to connect to irc.newnet.net and join channel #atari.

- Telnet from your 8-bit or other machine to irc.atarichat.net (216.37.55.109) and login as "atari". This will get you into the chat without the need for an actual IRC client.

- Use the Java applet found at http://www.newnet.net.

If you can't make it around 8:00 tonight, you can stop in at anytime, somebody is usually awake. We are predominately 8-bit folks... but a lot of us dabble in other stuff too. (Commodore, Amiga, STs, etc, etc, etc) There isn't much we don't talk about. It is a lot of fun....and very informative.

Hope you can come join us....we will be glad to see ya!!!

Hiya,

Even though most of you guys in here might not understand that much of Swedish, I still thought I'd drop a line in here too. We have just launched a new website for SAK (Swedish Atari Club) which has a more modern look and also is a lot more interactive.

You'll find the website here: http://www.sak.nu/

A big reason to mention it in c.s.a.s is that our annual event, Nordic Ataris Show (NAS) is drawing nearer each day. This year, the event will be held between June 29 and July 1 in Gothenburg, Sweden. This is of course covered (in English too!) on our website:

http://www.sak.nu/nas/

You'll hopefully find answers to any questions you might have about NAS, but if not, feel free to ask away on the forum.

Thanks,

/Joakim

i can tell you this from my own personal experience with rodolphe.
his stuff is first class.
he also comes thru. when you pay for his products a head of time. you
do not need to worry. you get the product in a reasonable time frame.
its as advertised, and its a first class product.
i have bought a ct060, a ct63, 2 100 mghrz 060's and a clock for the
ct060. plus he has me down for at least one pci slot, i will probably
fork out for two of them in the end.
on the other hand i have paid for a ethernac card at least a year
ago. i have never heard a thing since then. i may have to write it
off.
so in my opinion rodolphe and deidler, and some others have saved the
atari scene from a slow death.
the above guys are not some large corporation that can crank the
stuff out till the end of time.
i know they probably all have families and other responsibilities. we
should be happy we are getting what we have.
i can tell you from my own personal experience that we do a lot of
development work on atari 8-bits and the game machines. its slow work,
its hard sometimes to find parts and information, plus we all have
other responsibilities.   so maybe rodolphe cannot snap his fingers,
and get one made.
i can tell you my falcons fly. when i flip them on, i am in heaven!
we are close to modernization once we get a graphics card, and some
slots.
so ask rodolphe politely. maybe he is tied up on other things.
but if he says he will do it. put me down for one. i have a tt030,
and i know from what it did to my falcons, my tt will fly!
hey, if he does a upgrade on the tt030, what about mega ste's? that
would really heat up the atari world. 3-060 machines available at
once.
thanks,
lance

Have you watched the postings on http://nature.atari.org ?

Latest as of April 24th is another 18 are finished and they would like to send out 20, I hope this month.
I also paid well over a year ago.. September 24th 2005 to be exact.
But, I understand they had issues with the boards and they needed to be fixed which is taking time.

But they are trying to give monthly updates on the website, so check it out. Once and a while We will also post the latest on Atari-users.net

Hi,

Found this on Ebay, a peripherial for Atari:

http://cgi.ebay.fr/ws/eBayISAPI.dll?
ViewItem&item=280111420724&ssPageName=ADME:B:SS:FR:1

but I really don't know what's the use of it! Don't speak german at all...

Can anyone help?

Guillaume.

Hi Gang,

I added a new section to Atari-Users.Net today. It's a google map for Atari-Users, aka a frapper map.
The map interface requires a modern browser (I think it's Javascript based)

Log on and add your self to our Atari Map!

While logged in, zoom in on your location then select the "add" button on the right side.

Thanks for adding your location!!

Rob

sorry forgot the links..

The direct link is http://www.atari-users.net/index.php?module=Atari-Users%20Map

Or visit

www.atari-users.net and select the "Atari-Users Map" in the Menu.

perhaps a e-mail from them with a notification about progress reports
on their web site would be helpful.
rodolphe kept me updated on every one of his projects that i
purchased from him thru e-mail. plus he posted stuff on his site.
communications is part of the answer to having a satisfied customer.
how i found out about the ethernat was thru rodolphe.
i never even knew they had a site. at least i know now. thank you.

It looks like it is an Interface to connect a rfm/rll hdd on an atari. If i have
some time left today i'll have a look in my C'T collection.

bye

Bernd

I would have to agree, I am remembering that after playing Rainbow
Islands and Magic Boy I suddenly became incredibly evil. But the
cannibalism is relatively under control now.

Try google:-

*** RARE PIECE *** c't self's building - BUS INTERFACE IBM + ECB with c't
flat cable for bus connection at the Atari ST with driver CDs, IBM
sparkplugs and non removable disk plug-in card an attached non removable
disk ran at that time thereby.

Hi,

I'd like to install a 4Gb hard drive on my TT but partitions larger than 512Mb are refused, and 8 partotions is too much.

I've heard about BigDOS.

How to install it? Should I keep one boot partition with 512Mb and share the 3.5Gb for the others?

Is BigDOS compatible with Freemint+MultiTOS, FreeMint+MyAES, Magic6.02?

My usual system is the TOS3.06, but I sometimes use the others for testing purposes.

Any help is welcome,

Guillaume.

if you use FreeMiNT, you don't need to install anything -- your >=512
MB partition will be visible without any problem :) The same for
MagiC. However, it wont be visible from TOS, of course.

I borrowed Wings Of Fury for the Apple II from a buddy in the late 80s. I thought it was the best damn game I'd ever played on that computer once I learned the controls.

Yet I really doubt the Apple II version was the best.

For those of you that have played some or all versions of Wings Of Fury, what's your take on which one was the best?

Hi,

Ok before I kill my TT, by removing the wrong thing could someone please sanity check what I have to remove in order for my TT to use an external ZIP100 as it's hard drive.

The internal HD is dead and a 100mb ZIP would do just fine + I could transfer files easily between my PC and the TT.

I've attached a photo with the HD cover removed. Is it the two (?!?!) resistors at the top which are a rusty red colour?

Does anyone have a motherboard diagram for a TT?

Thanks in advance

Dave

thanks, I'll give the Amiga version a try since it seems to be the
most powerful platform WoF was ported to.  thanks for the links also.

Hmm. Posting a yEnc picture worked in alt.test but not here...

Is there something different about this group?

I can email the picture if anyone has any thoughts on my original post.

I can verify the Gameboy version isn't all that wonderful.

Ok no takers in Bedfordshire.

I travel up and down the A1 or M1 fairly regulary between Bedfordshire
and Yorkshire. Would be happy to meet someone en-route.

Just pains me to throw this away...

Hi,

Is it possible to setup a SCSI ZIP drive as the C: drive and boot from it on a TT or Falcon?

Dave

Ok, thanks.

Just tried this with a 100mb ZIP and a TT. I partitioned the ZIP and formatted it, I then installed HDDRIVER.SYS into the root of C: (The ZIP), I checked that the boot drive was set to C: and then rebooted without a floppy in A:

Message reads "No partitions found".

Even running HDRUTIL.APP from the A: drive now cannot find the C: partition.

Is the procedure for using a ZIP as the C: drive exactly the same as it is for a normal HD?

Thanks
Dave

Almost every 50 pins SCSI HD should work but... I have a Seagate
Barracuda KLGSPR drive that I never could manage to make work on
my TT, while it did on my Falcon :-/
>

You need a 50 pins to 68 pins converter - give me a few days, and
I give you the exact ref of the part ;-)
I'm currently using an IBM Ultrastar DCHS04U drive, which is 68 pins
single ended fast/wide with such an item, and it works fine :-)
Note however, that under plain TOS you will only be able to use the

12 first GBs (512x24, assumed that you don't use any other drive
such as CD), so ther will be 6 GBs lost :-(
Only MiNT or MagiC! will let you use the whole available space.

    I feel your pain.  HD Driver or the ICD utilities have always made it easy
to get another drive working though.  Granted in the last time I tinkered with
it I got a 120 mb old Mac drive working, but then I didn't need to do much on
the TT I have.  But later I might add more.

    Always wondered about using one of those IDE to SCSI converters, could be
fun.  :)

Any SCSI-2/3 drive that can somehow (without adapter if the drive has an
8 bit bus, with adapter if the drive has a 16 bit bus) should work with
the TT and HDDRIVER.

Yes, it's exactly the same. You should check your cables and
termination. The problem you observer could be a termination problem.

Cable is ok and the ZIP is terminated.   I've not changed any
termination on the TT itself, mistly becuase I don't know how to.

Ok so if I boot from the ZIP drive can I then switch ZIP disks once
the system has booted? At this stage I'm just using TOS.

>> in terminator. If I just pull the dead HD from the TT what else would
>> I need to use in order for this to become the main HD?   Would I need
>> to set some sort of termination on the TT itself?
>

I've found a SCSI cable which has the (Centronics?) 50 pin connector
on one end for the TT and 68pin (Wide?) connector on the other end.

Is it just me or are all the different SCSI connectors confusing?

In another thread regarding a ZIP question Uwe mentioned 8 & 16bit
bus... Argh!!!! ;-)

>Note however, that under plain TOS you will only be able to use the
>12 first GBs (512x24, assumed that you don't use any other drive
>such as CD), so ther will be 6 GBs lost :-(

Right so it's ok just to use the first part of the disk? Unused space
is simply that, unused space.

>Only MiNT or MagiC! will let you use the whole available space.

That's one for another day.

Cheers
Dave

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra

Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

OK! Lets change gears. I need to hook up my Mega ST4 to a modern LCD Flat Panel Sony TV using the Sony RGB interface. There are 2 kinds of RGB, Digital and Analog. Unfortunately my ST supports the wrong kind of RGB on the Sony. I would like to do RGB or even use the Sony as a MultiSync Color/MonoChrome Monitor.

Can anyone help? Thanx! ===Ben===

50-pin SCSI = 8bit
68-pin SCSI = 16bit

You can easily use 16bit drive on 8bit bus.

The cable with 50-pin connector on one end and 68-pin on the other would work for you.

Joshua.

I can't recall if you can set all available ID numbers on the ZIP
drives. If you can't set 0 for it, have you enabled its ID in HDDriver?

Re your termination question, the ZIP drives have a switchable termination.

Hi!

Is there any decrease? I mean, does the HD read two times 8bit or can
it internally change to 8bit operation, so that 'words' come in a row
with/to 'bytes'?

Having some more silent (other 1-2GB SCSI-HD's I have, 50pin SCSI-II,
are mainly loud and crappy, vibrations etc.) drives here around, but
with the HD-Socket 68pin...

Best regards,

Daniel Mandic

P.S.: HDDriver (Uwe Seimet) would be obvious then, yes? (having a 4,3GB
IBM 5400upm modern [~98'] silent and an IBM 9.1GB old style [~94'-95']
full height! copper striped, but with 68pin, too!)

Where is the difference between these alternatives? Instead of 16 bits
at once two times 8 bits are transferred. As far as speed is concerned
this is slower, of course, but with the Atari this is not relevant since
it cannot even make use of the full speed of an 8-bit SCSI bus.

Ben,
  What leads do you have at present for your mega? If you have RGB out three
phono plugs, then one of these:-

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=320106153232

 may allow you to use your Atari via the S-Video input I expect the quality
to be less than perfect. For best quality you need a more complex design
such as:-

http://www.jrok.com/hardware/RGB.html.

For mono you need to use something like this:-

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=130104309364

Plenty of circuits for these on the net. You may actually find that if you
feed the RGB into the VGA input it works. Trouble with Atari stuff, is that
as you know , the volumes are so small parts are expensive....

Dave.

If there is an internal drive *and* an external drive the termination jumper's on the TT' motherboard must be removed, otherwise they must be present.

> Ok so if I boot from the ZIP drive can I then switch ZIP disks once
> the system has booted? At this stage I'm just using TOS.

You can do so as long as there are no applications that expect the same data to be present on the boot drive that were present when booting. Accessories, in particular, might expect that, but I have no idea if any accessory actually does.
All in all it is basically the same like with any other (non-bootable) partition: Applications should complain if they are missing something they expect to find.

I think only 5 and 6 are supported. In this case, just as you say, HDDRIVER must be configured accordingly, e.g. by using the "Auto Configuration" option.

21 or 34 pin? (TV model numbers would be most helpful.)

I found this for the 34 pin (I have absolutely no idea if it is correct) on the web. (http://pinouts.ru/Home/sonyrgbmulti_pinout.shtml)

Pin #	Descrip
1,2	+5V
3 - 16	GND
18	T IN
19	N/RGB
20	H BLK
21	V SYNC
22	H SYNC
23	BLK
24	NO CONNECTION
25	B
26	G
27	R

28	Audio L
29	NOT MARKED BUT COMES FROM THE VIDEO BUFFER
30	REMOTE IN
31	NOT MARKED BUT GOES TO A TRANSISTOR BASE
32	Audio R
33	NO CONNECTION
34	INT/EXT

Since the Atari pinout is:

>1- Audio Out
>2- Composite Sync (or video)
>3- GPO ("General Purpose Output")
>4- Monochrome Detect
>5- Audio In
>6- Green
>7- Red
>8- Ground (+12v on some models)
>9- Horizontal Sync
>10- Blue
>11- Monochrome
>12- Vertical Sync
>13- Ground

Thus, I would guess your cable would have to be (ST -> Sony):

6 -> 26
7 -> 27
9 -> 30
10 -> 25
12 -> 31
13 -> all of 8, 9, 10, 11, 13, and 15

You could also use the audio pins for sound.

Hope this helps (and double check this with others -- I don't think I made a mistake, but it's not my monitor!)

Galen

Please don�t consider this spamming - this is not about earning a lot of
(!) money but I want to get rid of this old stuff and maybe someone has
a use for some of it.

It�s on ebay.at (austrian) but I think it also surfaces on .de (german)

Sers Uwe!

I understand. Yes that's the same...
But does it work otherwise? 50pin-to-68pin adapter (8bit SCSI drives to
Wide host-controller).

How fast would it be (MB/sec), let's say with a 4.3GB UW HD and the
adapter for 50pin SCSI, with HDDriver and the TT?

By the way, will any other SCSI devices work properly, with the
68-50pin Harddrive connected to the TT SCSI-Bus? So far I understand,
it should just act like a real 50pin 8bit SCSI HDdrive. Can it even
support different SCSI settings, like std.SCSI and Fast-SCSI 10MB/sec
etc. (of course in an other, more capable controller, e.g. NCR53C810
etc.)?

In short, is it really compatible (wide drives with adapter to TT) as
it were an 8bit SCSI-drive (older newer, anyhow, except the SCSI
version of the Fireball QUANTUM ;)), with downward compatibility to
older 8bit
SCSI host-controller, not able of Fast-SCSI, SCSI-II and such?

I have no adapter yet, just asking. Thanks!

Best regards,

Daniel Mandic

It's been a long time since I set up a ZIp drive for booting from :-)

I've just recalled that it matters which of the two sockets on the back
you use to plug the ACSI-SCSI converter into, which would tally nicely
with your earlier mention of cabling/termination issues.

Thanks for all those hints. Just ordered the contact spray and will do
as you described.
Of course I will knock on wood (as we say in Germany ;-)) before and
after.

Hi,

what I did with my Supercharger to speed it up:

http://perso.orange.fr/gtello/overclock_e.jpg (912 kb)

I removed the original 24 MHz quartz and put three of them (24, 30 and 36
Mhz) with a switch to select the one I want.
The CPU frequency is the third part of the quartz frequency:
24 : 3 = 8MHz, normal mode
30 : 3 = 10 Mhz, runs fine, +25%
36 : 3 = 12 Mhz, too bad, it hangs!

Maybe with a 33 Mhz one... don't know!

Guillaume.

Based on the above description, it should be:

  9 -> 22
12 -> 21

The ST has no composite sync, so it can only interface directly to a
TV (or monitor) with separate sync inputs like the one described
above. Alternatively, one can build a sync mixer board, although I
have no idea where to find plans for this.

The maximum with the TT is about 1.8 or 1.9 MB/s with any drive not
older than about 10 years.

Any device should work, and the TT (and Falcon as well) can make use of
any available SCSI-2/3 command.

Most of the older circuits use a simple resistor mixer to generate mixed
sync. I think the ones I have have 2x330ohm resistors in from the seperate
syncs onto the composite sync pin... See

 http://atari4ever.free.fr/hardware/video.html

Sony monitor lead for info

Yikes! What was I drinking yesterday?

Of course, you're right.

Hi,

I can't reach the ex Chapelie Belgian FTP server at

     <ftp://kurobox.serveftp.net:3021/>

Where has it gone ?

Regards,

Hi,

I remarked there's peculiarities with XaAES and its way to
handle apps memory stack. So that there's stack overflow with
Papyrus or with SpeedoGDOS (when printing with my proper
software).

May XaAES be too strict in its memory stack management ?
It there's a way to increase the stack memory reserved
by XaAES for applications pool ? Can something be changed
in xaaes.cnf so that it prevents from stack overflow ?

When we have to deal with GCC built applications, we can
modify the apps stack with "fixstk.ttp" or with "stack.ttp".
But when we have Papyrus or SpeedoGDOS that always worked
correctly so far, and don't still work because of the
stack management, we can as ourselves what's going on ?

Can somebody help with XaAES stack memory overflow ?

Best regards,

I noticed it too. As far as I know the server is still there but maybe
it's temporaly out of reach. Problem at this moment is that I can't get in
thouch with the owner of the server. Holiday??

CU,
Martin

Hi,

If we're speaking about graphic engines then

"Aero" is the graphic engine from Vista

<http://en.wikipedia.org/wiki/Windows_Aero>

"Aqua" is the graphic engine from OSX

<http://en.wikipedia.org/wiki/Aqua_%28user_interface%29>

Somebody would be attracted with *"Focus"* (meaning "fire"
in Latin language) the graphic engine from the ATARI GEM ?

We could combine elements :-)

ATARIstically,

What I have is not a Mega STe, it is a Mega ST4 with a 13 pin din port.

Tuesday, May 1st 2007,

Minor update with the complete Cubase Audio 2.06 package including CAFCRACK. Outputs of mixermap objects are switched to 'DSP'. It affects *.MIX and DEF.ALL files. You can now enjoy a more easier work with the built-in DSP effects!

More than ten years after Steinberg's withdrawal from the Atari Market,
here is a new crack called CAFCRACK for Cubase Audio Falcon 2.06.
Of course with this crack, you needn't the 128 bits key dongle plugged
on your Falcon. (OKI japan M7H007-024 SYNS0 E 3432351)
This crack is better than other existing Cubase Audio cracks on Atari.
This cute hack is the result of months of tough research.

Attention was turned to Cubase stability and data integrity which were the lack of the other previous cracks.

You must understand that it's impossible to know if this crack is perfect.
If you encounter any bugs you can report them on Atari newsgroups or forums.

There are only 2 drawbacks (I think they are minor):
- Cubase takes up more memory (+25%).
- Each part or track data needs twice more memory size (192 bytes instead of 96) but no influence on MIDI events.

But one thing is sure: this is the BEST crack ever made for Cubase Audio Falcon!

You must put in the same folder CAFCRACK.PRG and CAF_206.PRG of your current Cubase folder. CAF_206.PRG needs to be unpacked. If you are using the cubase score editor, you must put a specific patched SCORES35.MOD file in the MODULES folder. Be sure that the files attributes are not in read-only mode. Data is written in SCORES35.MOD for each cubase launch with CAFCRACK.

You will find in CAFCRACK.ZIP:
- Unpacked CAF_206.PRG
- Patched SCORES35.MOD
- CAFCRACK.PRG
- CAFCRACK.TXT

Xref: g2news1.google.com comp.sys.atari.st:9463

Version 3.90 of TeraDesk open-source desktop for the 16-bit and 32-bit lines of Atari computers is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

New features in this release are related to:

- Capability to set font effects (bold, italic...) in the font selector;

- Capability to recognize and handle (on suitable filesystems) executable files having names without extensions;

- Increased ranges of desktop or window background colours and patterns;

- Improved name-pattern matching, including the capabilities to specify exclusion name masks, and to use in single-TOS some wildcard options that, in previous versions, were available only in Mint/Magic.

Also, some noncritical bugs were fixed and a number of optimizations were made, so that, in spite of the added features, program size has shrunk to slightly smaller than in any of the the previous three releases.

See the history file for more information.

Have fun.

Djordje

Hi,

For a practical example of what I speak about, one can try
to launch

<ftp://kurobox.serveftp.net:3021/editors/papx_tos_demo.zip>

with <http://eureka.atari.org/MacAranym.zip> that was just
updated with Teradesk 3.90 (Thanks Djordje :) and you will
be reported an exemplary "Stack Overflow" from Papyrus X.

One can also try it with all other platforms hosting ARAnyM
and <http://eureka.atari.org/xa-my-aes.zip>

I suspect that it would happen on "Physical" ATARI machines
too. XaAES is having a huge consumption of USP without some
measures to increase the amount of this RAM User Stack.

Best regards,

Hi,

Can someone confirm that jumper W105 on the TT Ram board is used to set
Burst Mode?
And is it: 3-2 Burst Mode
And: 2-1 Non Burst mode?

If so, my TT Ram was sold to me ten years ago in Non Burst mode! Can I
change the setting without any problem?
I have a TT with CPU on the motherboard, and I have a CaTTamaran
accelerator.

Thanks,

Guillaume.

Thanks! that's it: Non burst mode on mine.

Yes, that's what happens! a line of "X" at boot time. And doesn't
work... Have I other SIMMs? Not so sure...

Guillaume.

Well last night I tried running the demo of MagiCMac 6.x for OS9 in the
Classic Envirnment on my G5.  All I got after the spash screen was a white
screen and the system froze.  Not good I'll try with other version of
MagiCMac that I have and see what happens.

You can start by emailing the enemy with the wrong place to meet with an
Atari. When he gets there, clock him over the forehead @ 1.79Mhz and then
cut him up with an Atari 800 cartridge door heat sheild..

Yes (as other folks have already reported).

>And is it: 3-2 Burst Mode
>And: 2-1 Non Burst mode?
>

Yes, with the pins numbered from the right when looking at the W105 the right way up (i.e. pins are 3-2-1).

>If so, my TT Ram was sold to me ten years ago in Non Burst mode! Can I
>change the setting without any problem?

The SIMMs have to be nybble-mode DRAMs. There was a good explanation of all this by Howard Chu many years back - I have the article printed out, but I'm not sure if it's still online. The conclusion was that, although burst mode can transfer 4 longwords in 7 clock cycles (compared with 12 clock cycles in non-burst mode), the 68030 burst implementation has very limited impact on performance. This is because:
. the 68030 only performs burst accesses when filling its instruction cache; data fetches always use non-burst mode
. most of the time, needed instructions are already in the cache

BTW, I checked two TTRAM boards, and neither had "burst mode" set. I suspect that burst mode TTRAM boards are pretty rare ...

Hi,

A Major Update of <http://eureka.atari.org/MacAranym.zip> has been
released that has to deal with compatibility and efficiency related
to EmuTOS 0.8.2 update.

This *Mini Pack* designed for OSX is a /Universal Binary/ *ARAnyM*
version working "out of the box" for all machines OSX >=3D 10.3.9
including x86 and PPC CPU.

I let you comment this major update :)

<http://eureka.atari.org/aranym.gif> is a live screenshot of my
proper dual-G4@1.25GHz, running with MacAranym as a Guest Star B-)

Enjoy it !

Nice, this one seems to work a lot better than the previous version.

Question - how come you're not using the latest kernel/XaAES?

Hi PeP,

Thanks for your interest in <http://eureka.atari.org/MacAranym.zip>

PeP wrote :

> Nice, this one seems to work a lot better than the previous version.

That's what it also looks to me too :)

> Question - how come you're not using the latest kernel/XaAES?

My source is <http://storage.atari-source.com/atari/mirrors/cvs_builds/>

I use the latest build from there. If you or somebody else has a more
recent build for freeMiNT+XaAES, I would be glad to experiment it.

You're welcome.

Best regards,

Hmm... try xaaes.atari.org instead.  That CVS build doesn't seem to
reflect recent developments..

<http://xaaes.atari.org/> is not supplying adequate version for ARAnyM.

I'm sorry. I already posted for that in the WEB attached forum.

Any other idea ?

You're welcome :)

I believe Ozk created some Hades drivers for the soundblaster,
available here: http://assemsoft.atari.org/gsxb/index.html - they may
work with the Milan but I'm not sure, sorry.

Yes, Ozk's driver works on the Milan. I can vouch for that. However,
ask Ozk directly for the latest driver as I believe the one on his
website is quite old. I no longer own a Milan so I can't be of much
help. Ozk's driver needs a Sound Blaster with the ES1371 chip. Make
sure you have it.

Joshua.

Strange. Is this another branch? I expected this stuff to be present in the CVS... It should be afaik.. last time I browsed the CVS sources, I'm fairly sure it included the img-decoder for the window textures... well, worth looking into.

Hi,

When I'm opening QED with freeMiNT+XaAES from

<http://storage.atari-source.com/atari/mirrors/cvs_builds/2006.11.08-free=
mint-bin.zip>

I have the following tricky dialog

<http://cjoint.com/data/ewaHJuCqsn_snap0000.gif>

Is there something wrong with my configuration ?

Thanks to help.

Regards,

No, nothing wrong with config, if you count using other VDI's than NVDI a config problem. The reason for this is that only NVDI have the necessary vdi calls used by pdlg_xx wdialog functions.

Because fVDI I'm using doesn't support these system calls, is there something more I can do if there's no config variables to modify ?

Would I just suppress C:\ALERT.ACC so that XaAES be quiet ?

Thanks to help.

I noticed that too. You're using a non-up-to-date XaAES, and you could
try downloading a bug-fixed QeD at xaaes.atari.org...

```

Monday, April 23th 2007,

Election of the President is not the only event of these days in France. There is also the new release of Studio Son for your Atari Falcon. The audio editor for Atari Falcon becomes more and more stable and reliable with this 2.092 beta version. Another bugs of general use have been fixed.

Studio Son 2.092b is available in the wonderful french language:
http://doyeuxyvan.free.fr/studioson/std2092b/STD2092F.ZIP

The english version can be found here:
http://doyeuxyvan.free.fr/studioson/std2092b/STD2092E.ZIP

You can, of course, find the classic 68030 and 68030+68882 versions in these archives.

I have performed a lot of hard tests to check the quality of my algorithms. I have written a lot of different DSP and C programs to obtain correct results. But, it is still a beta version, so be careful with your samples !

This version has been tested with an original Falcon 030 with a 68882 coprocessor. The CT60 card is not officially supported.

Bugs fixed:

- AU/SND files header write error fixed.
- Several loop errors.
- The approximative hi-speed play has been disabled.
- Icons draw bugs.
- Intempestive play.
- DSP effect restore bug after effects changes during a play.
- Reverse stereo with Invert function.
- Block undraw after a Scrub.
- Undo after the "Replace" function.
- Reverse stereo of echo-delay DSP effect.
- Record from cursor.
- Pause with SPACE while recording under Magic.
- Many another minor bugs.

New features and bugs fixed:
(since 2.09b version)

- Rewritten "Apply Effect" function. Studio Son does not need a temporary file any more.
- You can now create with "New Sound File..." blank AIFF, WAV, TRK, SND and AVR files. WAV files created are always 8 bits unsigned and 16 bits signed with little endian format (Intel). Either are always big endian format (Motorola).
- You can create you own sample frequency.
- New management of external DSP effects.
- New useful alert boxes added.

- Crashs when filtering under Magic fixed.
- For a resample process under Magic, internal file management fixed.
- Significative noise reduction of plopping sounds as long as you use Studio Son.
- Management improved of AIFF files compatible with Cubase Audio. These files are now saved with a physical size rounded to 1024 bytes multiples. Useful to prevent crackling noise when you import your AIFF files with Cubase Audio.
- Buggy "Scrub" function rewritten. No crash occurs.
- Reverse stereo bug for a "Scrub" fixed but still in beta test mode.
- Buggy "Cross Fade" function improved. Autocorrection for wrong parameters. The UNDO is also correct.
- Cut, Copy, Paste, Insert and others have their UNDO bugs fixed.
- Bug of the current working folder fixed. (After an Insert for example)
- DSP effect after a Resample and Filtering is now restored with no problem.
- Overall settings saving are now re-enabled ! Up to date, you MUST keep the STUDIO.SYS folder.
- Rewritten "New Sound File" function. You can now create a file with the fileselector, choose a frequency, ...
- Rewritten "Apply Effect" function. Sample gap subtly fixed. Due to the DSP real time application of this function, it is obvious that it remains a very small gap into your final sample. This gap is usually filled by zero values as it has been thought for this rewritten function. So, it's not recommended to apply an effect to a block selection.
- Markers management bugs fixed. (Delete, saving and loading procedures)
- There was play error with "Preview Cut" function. It's now okay.
- Block selection with SHIFT+TAB to the next marker has been debugged.
- Sample time length is now updated after any UNDO.
- Little bug fixed during a play actived by the space bar with an exported sample from Studio Son.
- Resampling function added (Linear Interpolation).
- Resampling function includes a filter and linear interpolation code in only one DSP program.
- You can resample from 2 Khz to192 Khz.
- WAV files opening issue fixed.
- Huge undo bug fixed.
- Huge bug of the volume of mono samples filtered fixed.
- FIR filters (Low Pass, High Pass, Band Pass and Band Reject) up to 2048 coeefficients.
- Resample process can be followed by a LowPass filter up to 1024 coefficients.
- DSP Filter algorithm improved. The speed of the treatment have been increased. Now you can enjoy a good optimization of the filtering process.

- The end of the sample is now truly filtered.
- Vu meter clipping problems fixed.
- The cursor running is now correct when sample frequency is not the same as the system frequency.
- Desktop background pattern modified to improve the work in monochrome.
- Redraw bug of the desktop in monochrome corrected.
- Several dialog boxes fields bugs fixed in monochrome.
- Crashs at very high zoom levels fixed.
- You can now really select all the sample with the mouse.
- You can now really place the cursor at the end of the sample with the mouse.
- Wrong size of the blocks at the end of the sample corrected.
- You can now create a block with a "one sample" size when you make a long click on a part of the sample.
- New alert boxes for the Filtering and Resampling function.
- New internal undo for the Resampling function.

New function "Resample..." allows you to change the frequency of your samples with a linear interpolation and an optional Low Pass filter.
The "Filtering..." function enables you to carry out FIR filters (Low Pass, High Pass, Band Pass and Band Reject).
This is performed by the DSP 56001 and with Direct to Disk process.

Known bugs:

- No sound when playing very high frequency samples.
- Slowly WAV files opening.
- Selected block after a resampling task is not deleted.
- Sample duration and time counter are wrong when the system frequency doesn't match with the sample frequency.
- Unable to reduce physically the size of a sample when you cut blocks.
- In the time counter, the value 99 is followed by 10.
- Several little bugs into the sample window.
- The icon of the function "Generate Low Frequencies" differs with the colour of the resolution.
- Little bugs of sample drawing.
- Random error messages when filter steepness is very low.
- Minor bugs.

Up to date, you MUST keep the STUDIO.SYS folder with Studio Son program file.

If you are using Studio Son on a single TOS, I strongly recommend the launch of ARROWFIX.PRG in the AUTO folder:
http://doyeuxyvan.free.fr/studioson/std2092b/arrfix15/

If you are using NVDI, just run ARROWFIX.PRG after this.

Otherwise, GEM must be copied in RAM with the program GEMRAM.PRG before running ARROWFIX.PRG:
http://doyeuxyvan.free.fr/studioson/std2092b/GEMRAM16/

If you have troubles to run Studio Son under Magic, you can use the patch DSPSLOW1.PRG by Centek included into the package or you can find it here:
http://doyeuxyvan.free.fr/studioson/std2092b/DSPSLOW1.PRG
Don't run DSPSLOW1.PRG if you launch Studio Son under TOS otherwise you might have display or DSP locked issues.

You can also use the nice DSPXBIOS patch by Didier Mequignon:
http://perso.wanadoo.fr/didierm/files/dspxbios.zip
http://doyeuxyvan.free.fr/studioson/std2092b/dspxbios.zip

If you use an external clock, run FDI_INIT.PRG into the AUTO folder:
http://doyeuxyvan.free.fr/studioson/std2092b/FDI_INIT.PRG

FPATCH2.PRG is now included in the package.

You can also download self-extracting STZIP unpacker:
http://doyeuxyvan.free.fr/stzip26/STZIP26.TOS

Have fun !

Yvan Doyeux

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

```

LOL.

There are VGA adapters for the ST (high res only) on ebay, a polish guy makes and sells them - I bought one off him so all ok, do a worldwide search for ST vga

It's kind of stupid, but if you have PC with video in (on the graphic card or on the TV tuner card you can plug composite video out from Atari ST in there). Don't expect very good quality. So you need whole PC to work like an adapter for that option. Obviously it's overkill.

There are others who make these. If you want to show color then perhaps a
frame doubler:-
```

http://www.faqs.org/faqs/atari-8-bit/faq/

and serach for scan doubler

"scan doubler"

```

In case anyone was staying awake nights wondering what had happened, my chip replacement surgery was a success.

Three of the pins stubbornly refused to give up their solder, so I used a chip puller to apply pressure to the side of the chip that had one remaining pin while heating the pin. This allowed me to pull one side of the chip. Then I heated the other two pins back and forth while continuing to tug on the chip until it gave way. I used some desoldering braid to remove the remaining solder so that the IC socket could be installed.

As someone else mentioned, a 40 pin socket can be shortened for use as a 24 pin socket. This works well with the sockets that have a plastic bridge across the middle; fortunately my nearby Radio Shack had one of these left.

I also used a brush and dust blaster to carefully remove all of the desoldering debris after I was done. There were several small bits that wandered down the circuit board as I was working.

After I had replaced the clock chip and powered up the first time, I thought something was b0rk3d because at the end of the boot process I had a small dialog pop up that said "AES Error" and had a single button labeled "Abort". Clicking this button just made the dialog reappear. But after I hit the reset button once, booting continued successfully to full completion.

I was able to set the date and time and save them, and saw the time moving forwards at the customary rate. I shut the power off for twenty minutes, powered up, and had the thrill of seeing that correct time was displayed. Hooray!

The only problem I have now is that whenever I tell someone about this achievement, they say "My G*d! You're still messing with one of those things? Don't you have anything better to do with your time?!" ;)

Most certainly.

ST High -> VGA is a simple matter of making a cable. Here is the (edited) copy of a post I made about four years ago:

... ST High is NEARLY the same as monochrome VGA, so you can get a simple adapter cable and any VGA monitor that can handle multiple resolutions. Pretty much any one I've seen made after 1998 will be able to display it. You won't get STLow or STMed though.
STHigh : 35.7 KHz, 72 Hz refresh, 1.0V max
Standard VGA: 31.5 KHz, 60 Hz refresh, 0.7V max

Here's what I found on the web (note, I haven't tried this myself):

```
ST to VGA (ST High)
-------------------
        ST pin number          VGA pin number

        9  ( H Sync ) --------- 13 ( H Sync )
        12 ( V Sync ) --------- 14 ( V Sync )
        13 ( GND ) ------------ 10 ( GND )
```

10 (Mono Out) needs connecting to VGA pins 1, 2 and 3. If your monitor doesn't have a setting to handle a 1 V signal (mine can switch between 1 V and 0.7 V) you should use a 75 Ohm resistor for each of the R, G, B signals connected to MONO OUT -- however, most monitors I've seen don't get harmed by a 1 V signal (they're just a bit bright), so if the monitor is relatively inexpensive I would consider the last step optional.

The following pins also need connecting together on the VGA connector:

4? (Monitor ID Bit 2 ?) -- This pin may or may not be needed, depending on the monitor.
6 (Red GND)

7 (Green GND)
8 (Blue GND)
10 (GND)
11 (GND)

The following pins also need connecting together on the ST connector:

4 (Mono Detect)
13 (GND)

As for VGA Low or Medium, European users can use the SCART connector (so I'm told). We Americans have three choices:

1) Use the TV (composite) output to a computer or monitor that can handle a TV signal. (This is usually a poor quality solution for ST Med, but is OK for ST Low.)
2) Use a scan doubler. (These are generally available at electronics stores in the video games section. Look for something that is designed to let you play your PS2 or GameCube on a VGA monitor. (This works great for ST Low and OK for ST Med.)
3) Use a monitor that can natively handle the ST's resolutions. Unfortunately, the only ones I know of that have been made in the last fifteen years are very expensive, as they are made primarily as replacements for displays of large-scale equipment (power plants and the like).

On interesting solution is to use a LCD TV/Monitor. Many of these have a composite in (good for ST Low) and a VGA in (good for ST High). Of course, should you go that route, a native resolution of 640x480 or 1280 x 960 is suggested to avoid rescaling issues. I've seen several TVs that would fill the bill, but you'd have to create a cable with a toggle to change resolutions (or use the old "Monitor Master" device.

Sorry folks,

We're in the process of switching registrars and servers, and the
BBS-style chat at atarinews.org is not up and running this week.

We hope to have it back up to speed by next week.

Thanks for your parience,

Joe Mirando

Not sure about the usefulness of that accessory. Any reason why you use that?

There is a configuration in xaaes.cnf called 'alert_windows' wich you can use to shut alerts up. Look it up in the example xaaes.cnf found in the cvs source tree.

  That makes for a great deal of nice stable code for sure ;-) I have
not yet decided if I show up at NAS. I've not had time for any computing
lately, and so I almost have not done anything since last NAS...

Hi,

Pretty sure the hard disk in my TT is dead as a Dodo.

What options have I got to replace this? The one inside it is a Quantum Discache from 1988, I'm not even sure of the capacity.

The SCSI connector on the back has 50 pins.

Can I just pick any 50 pin SCSI drive from Ebay and plug it in?

Also I have a couple of external 18gb HDs in rather solid cases made by a company called "Blue Disc" They are the 68pin types with a plug in terminator. If I just pull the dead HD from the TT what else would I need to use in order for this to become the main HD?   Would I need to set some sort of termination on the TT itself?

I have HDDriver 8.18 for the setup/partition.

Thanks in advance

Dave.

It will only display the logo if it can initialize the graphics card
properly. Try using the card that came with the machine, since it's
not compatible with all Mach64s and ET6000 cards.

While I have signed the mentioned list, I agree 100% with Peter.
That attitude is not a good way to make friends.

Regards,

/Joakim

Hello from France Axel.

I've had similar issues in the past. Two times, I got the MB repaired but I also managed to 'repair' it successfully a few times.
Some suggestions :

- remove all the RAM modules, let only one and change it with the others
- unplug your FD, I had this issue one time after plugging an additional 720 Kb FD with the 1.44 Mb one
- unplug all drives (HD, CDRom). First thing to do is at least to have a screen with the boot logo.
- check the pins of the oscillators (or quartz, I don't know the english word). Easy to remove.

Now what helped me the most, but a bit more difficult :
- try to find a product called 'KF contact', or equivalent.
- remove the CPU (try to get the tool for that, it is fragile)
- remove all the the Xilinx chips. This can be done with a bended wire of strong metal, small diameter of course. Take them smoothly out of their support. Another time, be extremely carefull when doing that. And before to unplug them, note the position.
- remove all the chips that are not soldered, carefully again
- Using the KF Contact, 'wash' the chips and the supports. No need to dry them, the product disappears almost immediately
- pressurized air can be usefull to remove the dust that can create shortcuts
- I have read that the chips on the MB are "cold soldered", instead of using

liquid metal, wave soldering. It seems that this is making the contacts not very reliable. Using the KF contact on the entire MB won't hurt it.
- Replace all the chips, light a candle and power it up.

If you don't feel comfortable with that, ask someone else of course.
This is what I did several months ago because my H60 was freezing very often. Since then, it is running like a charm (I touch a piece of wood like we say in France).

After that, if there is still nothing, get it repaired. Freddy Aschwanden is not repairing them any more, AFAIK, and the guy in Paris who repaired mine has retired. May be Rodolphe CZUBA can give you helpfull informations

I hope it will help you

Best regards.

Hi Folks,

My Falcon has a dead clock, and it has the MK48T87B. I ordered a replacement online and received a Dallas DS12887+. I'm hoping that someone will know enough about these chips to answer a few questions:

1. This is pin-for-pin compatible with the MK48T87B, I hope. Is that right?

2. The MK48T87B has all of its pins. The DS12887 has some gaps, there are a total of six missing pins, some on either side. But if #1 is yes, I'm guessing that these are extra grounds on the MK48T87B. Is this right?

Rather than attempt to desolder the old chip, what I'd like to do is cut the current chip out by using a dremel tool to slice off the tops of the

pins close to the chip's plastic. Then I can solder a 24 pin socket on
top of the existing pins.

I've heard of this being done before, but I'll need to be very careful
to avoid damaging the traces on the motherboard. I believe I can
protect the traces by cutting some thin but sturdy material to the right
width and sliding it underneath the IC to function as a shield.

Any thoughts on this approach?

-dreq

Personally I would (and will) desolder the IC. I have 2 of them to do
this week. Just remove the board and carefully (also quickly) desolder.

I am considering putting in a socket, but it will depend on clearance under the keyboard for my stock model. Will probably socket the towered Falcon. Considering the cost of a new Falcon board you might want to take it to a electronics repair shop.

I look for Mega STE schematic. Googling resulted only in dead links.
It looks that Best shop killed all free sites ??

Does someone can send it to me, or some alive link ?
I need it for some development...

Thanks Mark.

Mine is in the Falcon Rack case, so clearance isn't a problem.

Fortunately there is space around the clock chip on the front of the motherboard so there's some room for work.

24 pin sockets are getting hard to find. I used to be able to buy one
in town. Now I get to find out what it costs to ship a $2 part... :p

Since you're obviously happy with a soldering iron and such, why not
consider taking the top off the NVRAM chip and wiring up a CR2032 coin
cell in a holder instead? This has been mentioned in here or in
c.s.a.tech many times before.

Folks,

I have built an Eiffel board with the latest firmware from http://perso.orange.fr/didierm/. and it seems to work pretty well apart from an issue with the Joysticks. The only game I could find that loaded on my old MEGA was an old copy of space invaders. It seems to work fine apart from it ignores the Joystick fire buttons. I notice that it says on the firmware web page that the "IKBD_SET_FIRE_BUTTON_MONITOR" call is not supported. Could this be the problem?

Any one else tried this program with an Eiffel? Any thoughts on another good test program? Any that will run on a TT?

Oonce you have sliced the top of the chip I would have thought that the pins
could be removed with a solder pump fairly easily. This was the approach I
took with my STE when I replaced the DMA chip.

I agree.  You don't need a new clock chip -- your clock chip needs a
new battery.  If you don't want to desolder, I would strongly consider
just wiring in a new battery.  Frankly, I if I of little electronics
background can accomplish the battery replacement, practically anyone
can.

Hi Derryck,

This approach didn't work for me. On advice in another message, I tried prying up the upper half of the MK48T87B.

Unfortunately, I found that the battery and other components were embedded in solid plastic in the upper half. It was filled with a kind of epoxy. Prying it loose pulled its very thin leads out of the lower half of the chip, so there's nothing left to work with.

I'm not sure if this is how they all are or not, but those leads are extremely fine and would have been difficult to solder. I looked at the example image someone had posted, and the interior of my chip doesn't look anything like that. There were no components mounted on the lower half.

Thanks for the advice.

You can get a larger 40 pin socket and cut off the unwanted pins.
Another trick I will be using;-)

Ouch! At least nothing was lost, apart from your time :-/

The NVRAM chip that I witnessed being replaced would have lent itself
very well to this approach. Its replacement was sourced as a free
sample from Maxim, I can't recall the actual number any more.

I would probably suggest desoldering the entire chip rather than
bodging by cutting through/soldering to the original chip's pins. The
risk of metal swarf...

Hi,

There's a new binary version of EmuTOS that is available from

<http://atari.sk/download/falcon_os/emutos-512k-0.8.2.zip>

We can read at <http://atari.sk/>

"
New version of EmuTOS is released. EmuTOS is a GEMDOS compatible
operating system for Atari ST series computers. It is made from Digital
Research's GPLed original sources and will be a free and open source
replacement for common TOS images.
"

It changes a lot in speed and compatibility comparing to all
what was made before it about compatible TOSes. Just testing :-)

I made it available in <http://eureka.atari.org/MacAranym.zip>
a Universal Binary mini pack for OSX that works "out of the box"

And in <http://eureka.atari.org/xa-my-aes.zip> a disk image that
offers a compatible environment for all other ARAnyM host platforms.

I let you comment this major update. Greetings to EmuTOS Team !

Best regards,

Noted, and I know how to make friends, and how to accept the challenge of a hothead, which I did in this case.

That said, the list continues to grow.

So, a slightly crazed moment of boredom resulted in my old Atari ST being taken out the cupboard, dusted down, hooked up to a VGA monitor and generally being fussed over for a bit. Its hard disk has been imaged and Hatari-ised, while the mouse has been thoroughly spring cleaned.

Also, since alcohol may have been involved - the end result is that my ST is back on the internet, after almost a ten year absence!

(Running STiNG, routed over a null modem cable to a Linux PC assembled from odds and ends and hooked up via ethernet to a switch then ADSL, and in itself being controlled remotely from the wireless MacBook Pro parked on my lap. Of course!)

Anyhow, I've seen lots of recommendations for a 'Telstar' telnet program - it sounds like it might be marginally more reliable than the crashy TVT one I just found. Trouble is, all the download links appear to be dead.

Since about the only even slightly useful task I can think of for this ST is as a not-entirely-dumb terminal, does anyone know where I might find it?

Cc:ing to my hylobatidae.org address would be greatly appreciated, as all this elderly computer hardware is making the house a bit on the warm side. Do avoid the email address in the signature below - I thought I'd leave my signature intact to demonstrate True Atari Leanings. ;-)

Many thanks,

Adam

Top posting. All copies of telstar.zip are munged. There is a telstar.lzh
to be found by ftp to kurobox.servftp.net:3021, or as a dotted quad

213.118.244.69 port 3021, however your ftp program does that, and that one
is not munged.

Brilliant FTP site, thanks - but alas, this fabled Telstar telnet
program seems even worse than the first one I tried!

(It *looks* very nice, but it seems fixed in its line-input only mode
which makes it impossible to use BBSes etc, and managed to lock up

after I pressed a configuration button. Ah well...)

Still, lots of other interesting stuff to explore on the site,
including a rather nice and simple, command-line FTP program!

Adam

Guys,

Developing a bittorrent site devoted to distributing classic computer related material - it's in test mode at the moment at http://landover.no-ip.com:6969 - test it out if you will (try uploading too). Any comments (good, bad or otherwise), there's a forum attached.

cheers,

Lance

This week I picked up a floor model PowerMac G5 dual core 2.0ghz at 50% off from a local retailer. So I'll have to try MagiCMac under the Classic Environment as I can not boot into OS/9 directly anymore.

http://rtdos.com/tiki-index.php?page=The+BASIC+Language+Retropedia

working on a retropedia of sorts for the basic language; what we are trying to do here is create a xref system of the different commands each dialect of basic used and how each dialect of basic used them. we're trying to cover all basics for all machines (from the first machine that used basic up until as recent as possible or feasible); back in the early to mid 80's there were TONS of books on the subject and we're trying to re-create that here (since most other classical computing sites contain information on the various machines we are trying to gather programming information on these machines so, no, we're attempting to NOT duplicate the same information on other sites although we'll link to these sites when necessary, possible, and or allowed by these other sites).

Aly,
 In that case I think I need to go debugging. A quick check on the comments
in the source

http://perso.orange.fr/didierm/

seems to match the circuit diagram on the web page, but there are some comments about joystick-0 and LCD display. Pity they are in French, and I only have a CSE 2 (I thats about a GCSE Grade D) in French from 38 years ago. In fact I guess that when I learnt French the word "Joystick" hardly existed!.

Actually I think that might be the issue as I was thinking most games used joystick-1 so you could leave the mouse in port-0, but its so long since I played an Atari game on a real Atari I am not sure even which port maps to which joy stick...

Any way most go and take number 1 son back to Oxford, so may not get time to try today...

Dave.

Telstar works for my purposes, and so does TVT102, which is also almost as stable as the proverbial rock. TVT102 needs a GDOS to run on, and this message is being written by TVT102, running on a Stacy. The GDOS.PRG in use has a file length of 8853, and probably came from the SLM Diabalo distribution.

It may be that not all versions of GDOS work well with TVT102.

Yes, I know what Telstar does, which is not what is wanted for using nonstandard telnet ports. The copy on that server is my personal copy, which went there after I found that all zipped copies anywhere did not unpack. It is what I use on a TT030 with a TTM195 monitor in single tos.

Jim

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Does anyone have (or can point me to) the Atari MagiC 6.0 to 6.1
patch?

Thanks in advance

May not have that choice..

I must make a point of buying OEM XP-Pro before they completely discontinue
it.

Oh SP2 ..don't even go there. I don't update! Mind you, I don't enter any
personal information into a computer either. Do you think I'm mad? :-D

We grew up with these things... And now they expect us to enter all sorts
of information into. "It's perfectly safe."

Dammit. I have the German one (286) whose name I forget. Still trying to
find software/drivers for it. Running a 386 will be tricky, 286 was 16
bit and 386 was 32 bit. Isn't it funny, taken till last year to get to
mainstream 64 bit;-)

Mark

Few years ago, I started to work with a cracked CAF version.
I noticed cut,copy,paste and move bugs ( infinite loop ) when I selected
several parts at the same time.
Some of my big songs after a loading lost few events or simply crashed.
I thought about Cubase bug, but it came from the crack.
Now I have an official version with a dongle, and it's perfect!

But I will try this new version.

> BTW, what was wrong with the old crack? I used it for a long time with
> my CAF because I wanted to use the cartridge port for something else,
> and I don't recall having any problems.

(this was posted originally here:
http://www.dbug-automation.co.uk/forum/cgi-bin/yabb2/YaBB.pl?board=3Dhardwa=
re,
posts will be gathered there)

Ok, I'm ripping this idea off another forum, but hey!

Here are the facts:

a) We like Alison :)
b) We think she's a great HW developer
c) We dealed with her and we can say that she's an absolutely fantastic, good mannered, proffesional, etc. lady and we'll gladly deal with her anytime :)
d) We want a neat CF to ACSI solution!
e) We want to motivate her to finish WeST

So we're trying to gather as much interest as possible, so she can be motivated to finish it :)

You ask "What's a WeST?". In her own words:

"Ah, WeST. I want one. I just can't get the motivation. This Scart/VGA thing will spark it off if there's interest in it like there was when PeST was launched.

Over the last few days with moving this and that, a WeST would be so handy. It's almost finished. It communicates on both sides, that's the hardest bit and tested, it's just getting it to say the right things which needs to be finished. I kind of have a reputation for doing that, ...enthusiastically starting a project and doing the difficult impossible bits, then losing interest.

WeST, if ever I finish it, is imagined to be about 2inches square!!

And that's it! SD card socket on the back. 2.1mm power connecter. I was even having silly ideas of putting a rechargable battery on it so it could run standalone. It draws about 150mA, mainly due to the high MIPS of the MCU. And given that most 4.5v board batteries are something like 400mA I'm wondering if the size could be justified. The whole board would be encased in heatshrink like PeST, and a battery would really mess that up. Could just have a 9v radio battery hanging out if someone wants portable.

I want it to be about 2inches square. And I haven't even had a professional prototype PCB made yet, which would be much larger. Once it's all finalised, it then goes SMD."

and

"I was developing WeST which is a CF card ACSI hard disk interface, just that the newcomers expect to pay like a tenner for it and then start complaining about how much it costs. Fine. Solution is simple. I'll (we'll) do something else. I was getting transfer rates well up to the DMA maximum of 1MB/second. As purely I was proud of what I was doing so put the time into the it's development. It's took months of 8-hour days to develop something that not only worked but had full CRC capability too. Microcontrollers with lots of I/O and which run at 40MIPS ain't cheap!! About =A315-20 a go if you're splitting hairs. Now if I was buying them by the thousand then maybe lets say =A38-9. The reason why your USB card reader for your PC only cost a tenner is that they made 5-million of the things in China!!!!!!!"

So, if you're serious about getting one, please reply to this post, stating how many interfaces would you be interested to get. I can't get a price quotation at the moment. Maybe in due time. All will depend on demand I guess!

So, get replying ;)

(P.S. the 256 is just a fictional number I made up! Besides, $100 is a round rumber, right? :P)

Thats the one. You bloody little ripper;-) Been hanging out for ages to
give it a whirl, but never able to find drivers. I actually bought my
Falcon number 2 in to work today to format some floppies (Windows still
sucks at it) which I use for bios upgrades. Will fit the Falcon speed to
it tomorrow. Lucky I put a 20 gig drive in it;-) Probably have to do the
Dallas chip too. Haven't fired it up for a while.

Anyway, I owe you one;-)

Viva la Atari

Mark

Hi everyone, I was wondering if someone has Last Ninja 3 for sale, complete in the box for Atari ST? I have Last Ninja Remix and Last Ninja 2 and I am trying to complete the set. I will offer 8 british pounds or $15 for the game complete. (I will also pay for shipping from wherever) Thanks. -STcomp ps preferrably the original large box version, but I will also consider the budget re-release
